INTRODUCTION

This guide provides the step by step instructions for using EduHappy system, the enterprise school management system.

This complete guide shows you how to use all the features provided in School Administrations Module, Teacher Module, and Student Portal.

Topics Covered

- By the end of this complete guide you will be able to:
- Setup and Manage the whole system via Admin module
- Upload content and manage day to day activities via Teacher Module
- View and download content and review reports via Student Portal

Prerequisites

You only need to have Google Chrome internet browser to access the system.

School Administration Guide

Account Management

Create Account:

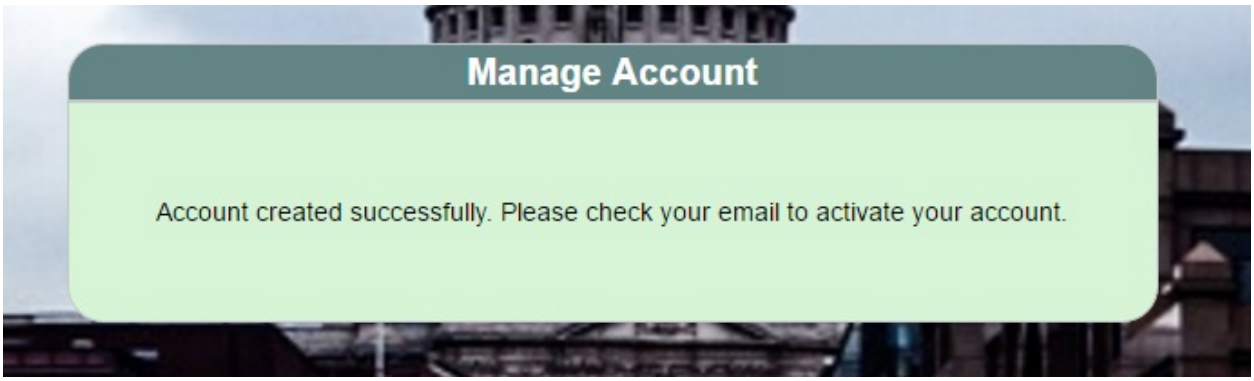
In order to have access to the system, you must create an account.

You can create the account through this link:

http://localhost:8080/EduHappy/Account/Signup.jsp

You will need to fill in all the required fields which are marked by (*) and agree to the terms and conditions and the privacy policy.

Once you have submitted this form, the system will send you an email with an activation link.



You will need to click on the link in order to activate your account and start the 14-day trial period.

EduHappy Account

Hi Admin

Welcome to EduHappy, The Enterprise School Management System that helps automate all your education processes and deliver high quality learning experience.

A 14-day trial account has been created for you with full access to EduHappy system.

Login Details:

Username: info@edu-happy.com

Please click here to activate your account and start your FREE trial period

After you activate your profile, you can access the School Admin system through the following link: http://localhost:8080/EduHappy/Admin/Admin_Login.jsp

After you create teacher profile, you can access the Teacher system through the following link: http://localhost:8080/EduHappy/Teacher/Teacher_Login.jsp

After you create student profile, you can access the Student Portal through the following link: http://localhost:8080/EduHappy/Student/Student_Login.jsp

If you need any help, please contact us at info@eduhappy.com.

Best of Luck,

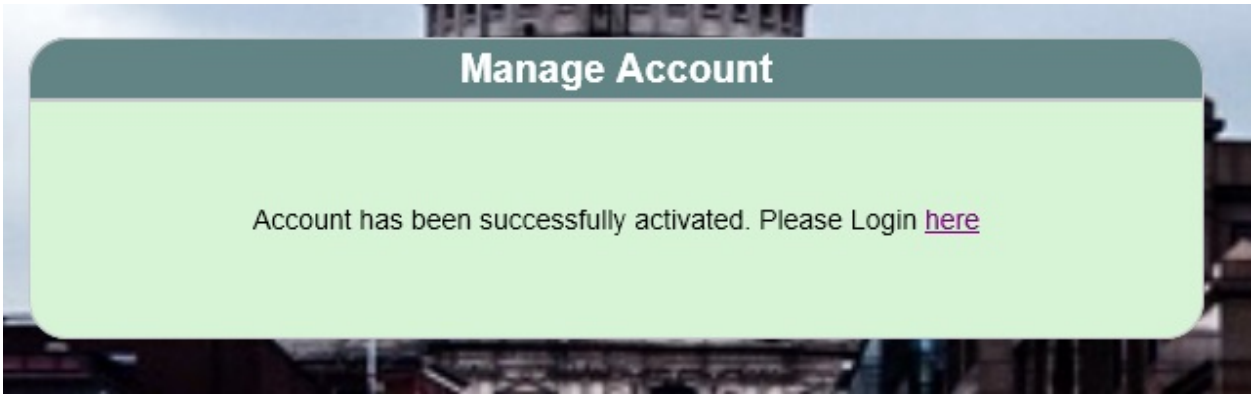
EduHappy Team

www.edu-happy.com

Email: info@edu-happy.com

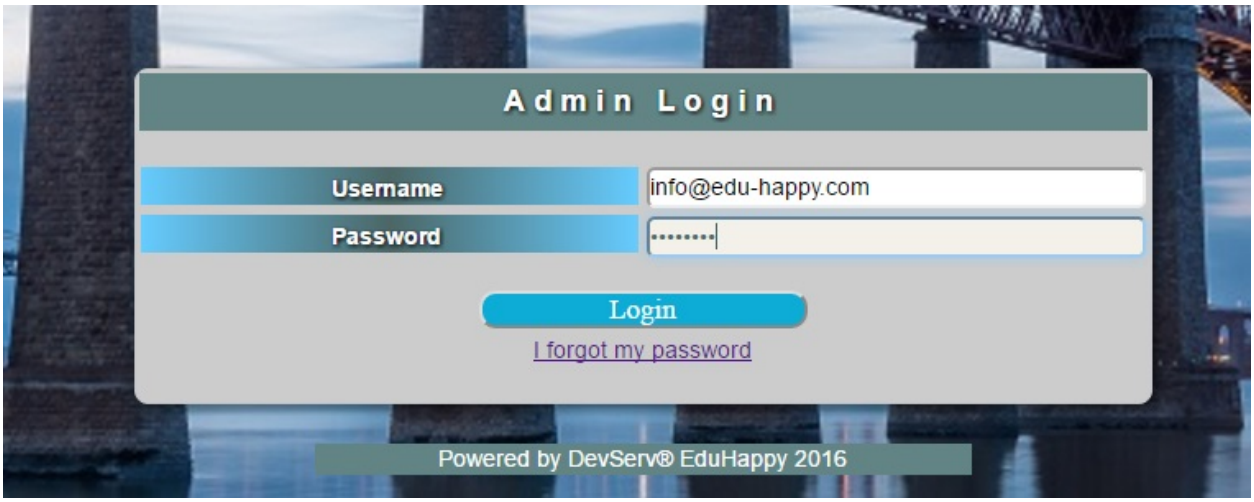
The email will also contain all the login information which you will need to use after you activate the account. Therefore, please keep this email to return to as a reference for the login information.

Now, once you click on the activation link, the system will activate your account and display a confirmation message to you as follows:



You can now click on the link displayed in the activation response message to login to your account as Administrator or otherwise, you can refer to the activation email and follow the links given to you to start accessing your account.

When you access the Admin login link you get into the Admin login screen to access the Admin System as follows:

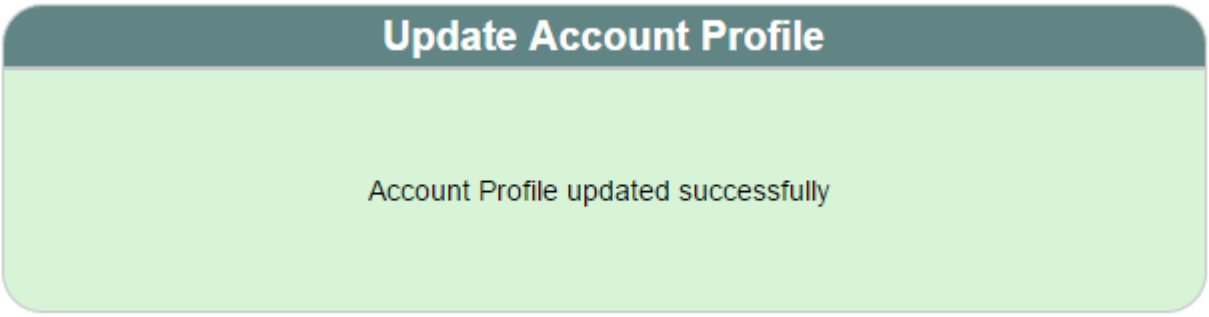


Please enter the username which you have used to create the account and enter the password. If the information is correct, the login will be successful and system will log you into the Admin System as follows:

Update profile

If you need to update your profile, please go to your account settings and choose Update Profile as follows:

When you are done, click on Update Profile button to save the changes. The system will respond with the following message:



School Management

First steps you will need to accomplish in the Admin system are to create school profile and school year with school year terms if exist.

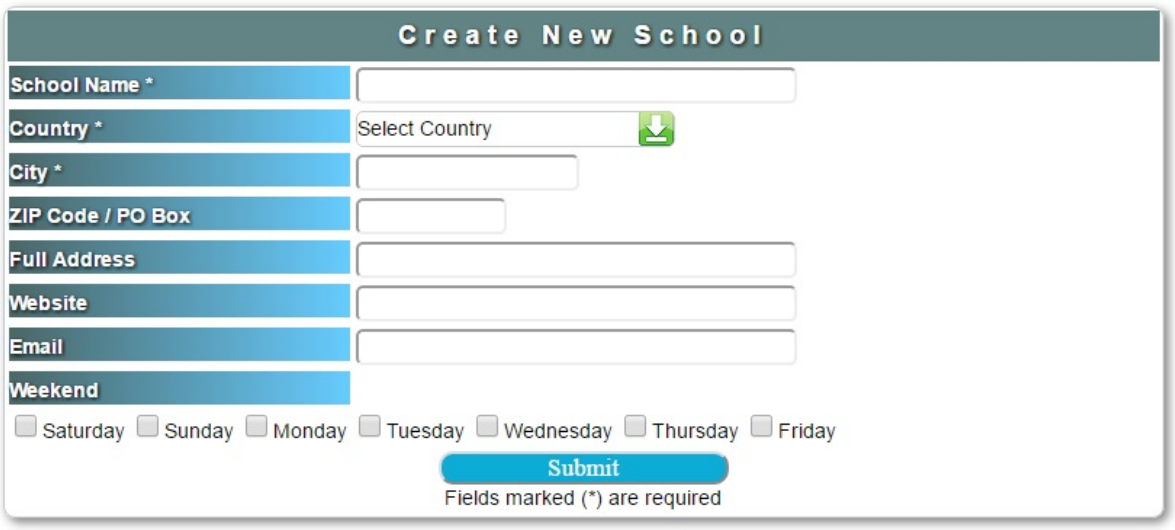
In order to create new school profile, please follow the next steps.

Build school

Go to Schools menu > Build School then click on New School:

New school

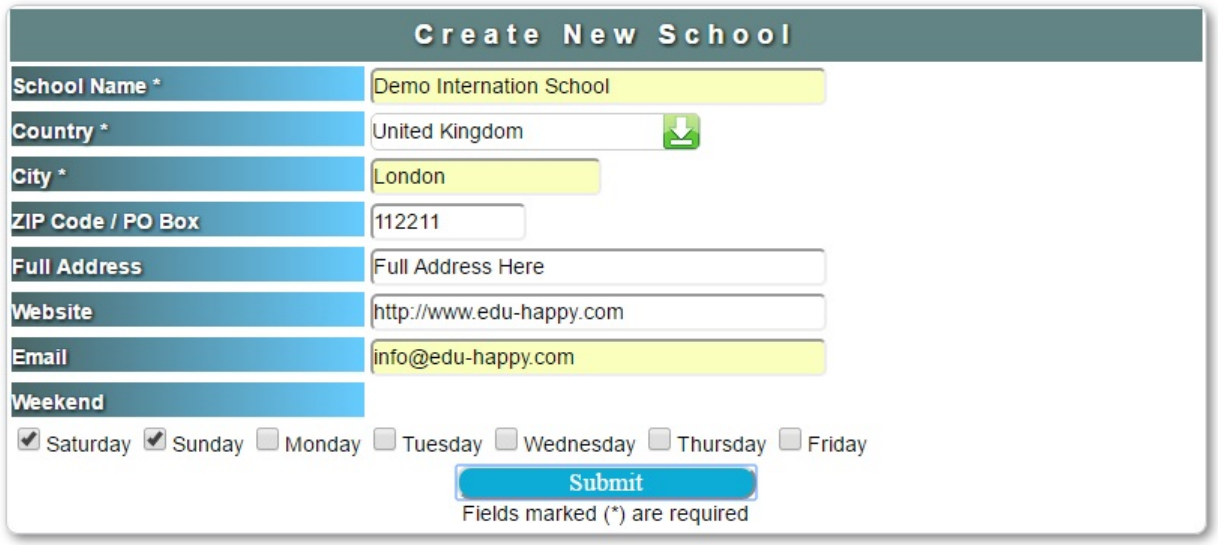
Create New School form will be displayed as below:



You need to fill in all the required fields in order to successfully create the new school profile.

Please note that although the Weekend is optional, it is important to field since it affects the Schedule system which will need to recognize the weekend days in order to exclude them from the schedule as we will explain later in the Schedule Management System.

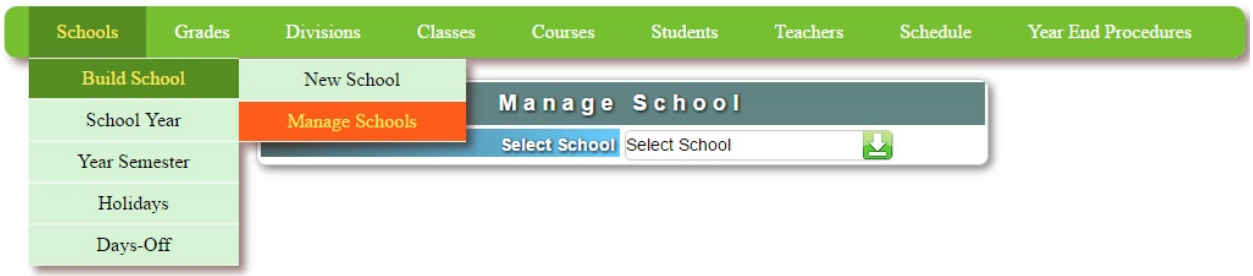
When you finish entering the required fields click Submit button:



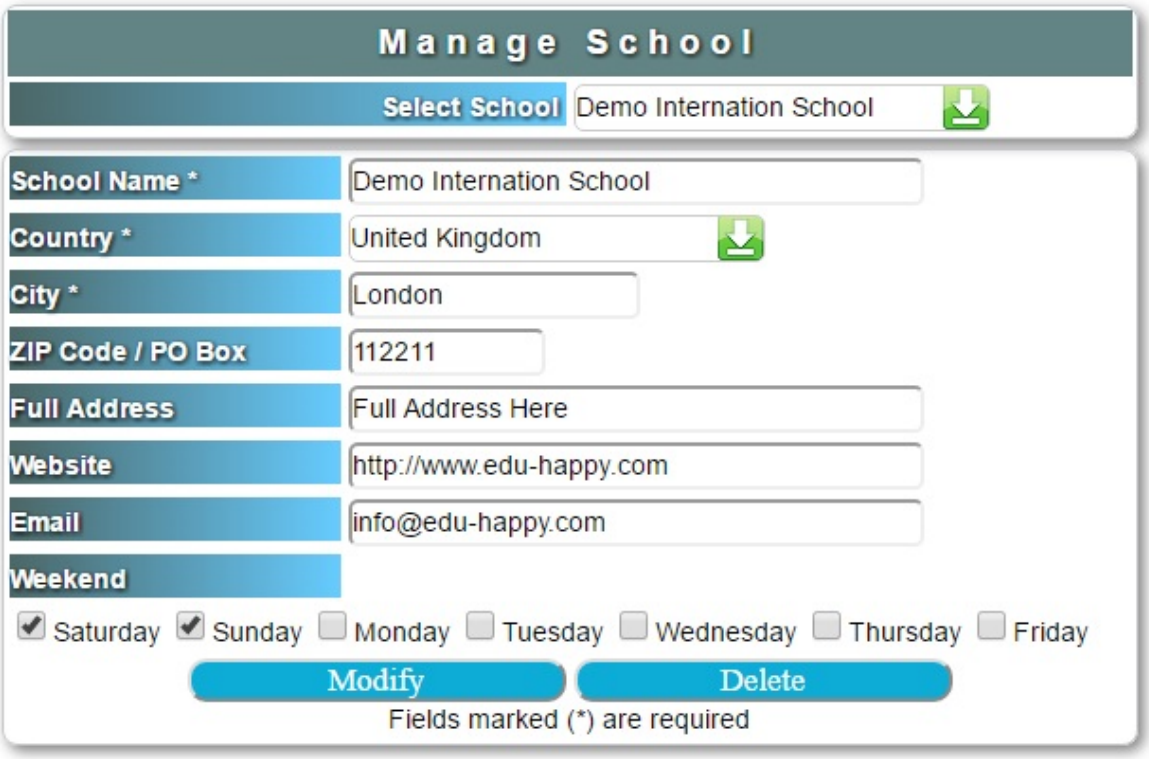
System will respond with the following message:

Manage Schools

You can update any of the fields you have previously entered by going to Schools menu > Build School and choose Manage Schools:

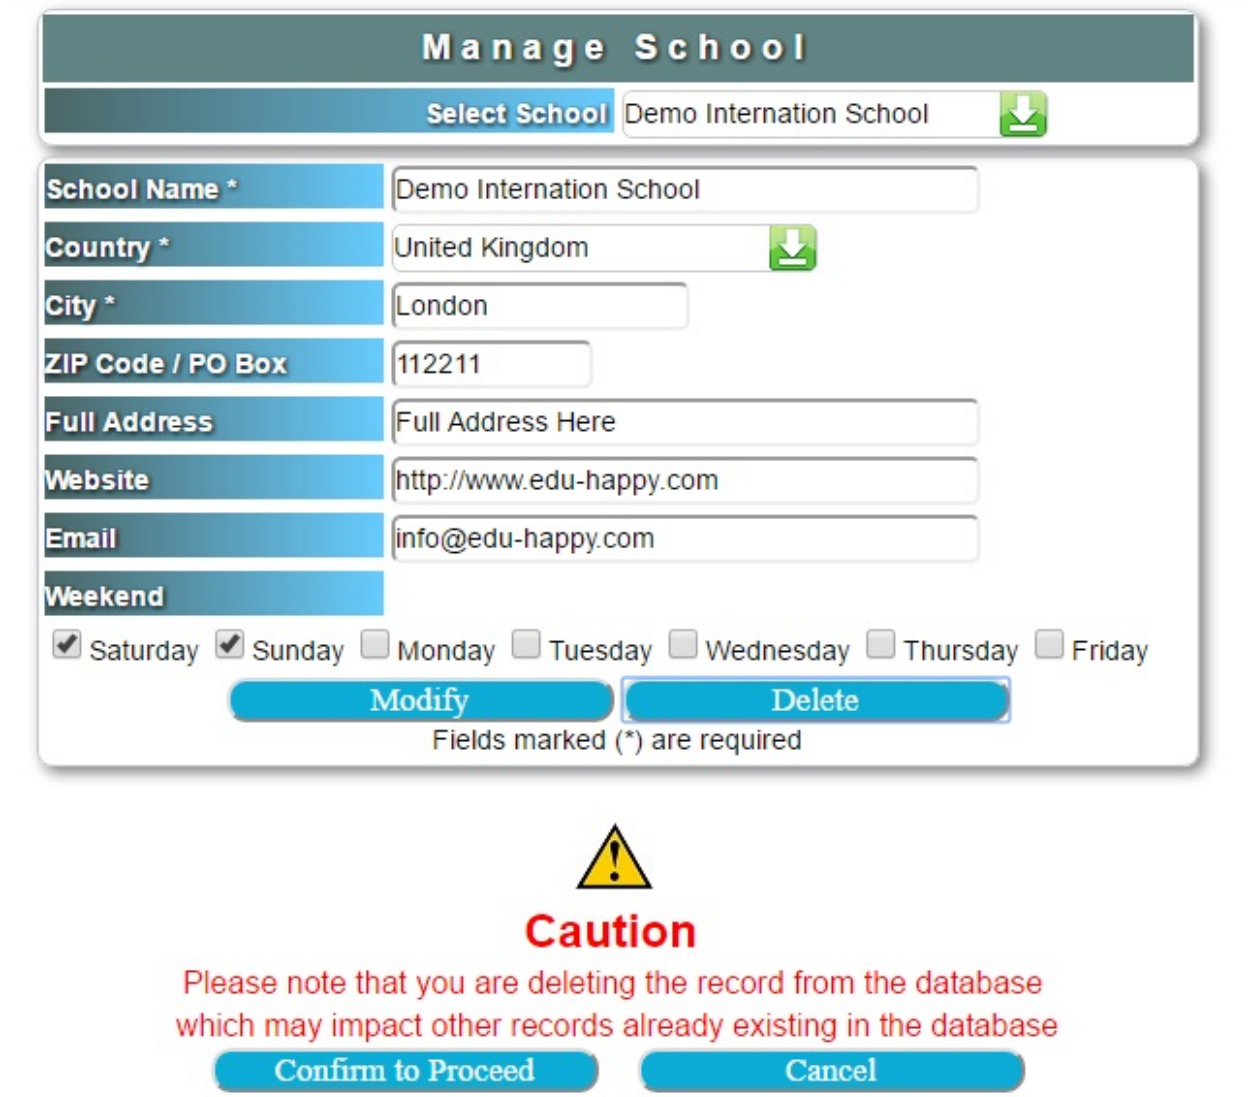


Then you will need to choose one of the schools you have created from the drop-down list. Once you choose the school, the Manage School form will be displayed and you will have the option to update any of the fields you need to update and then click Modify button to save your modification:



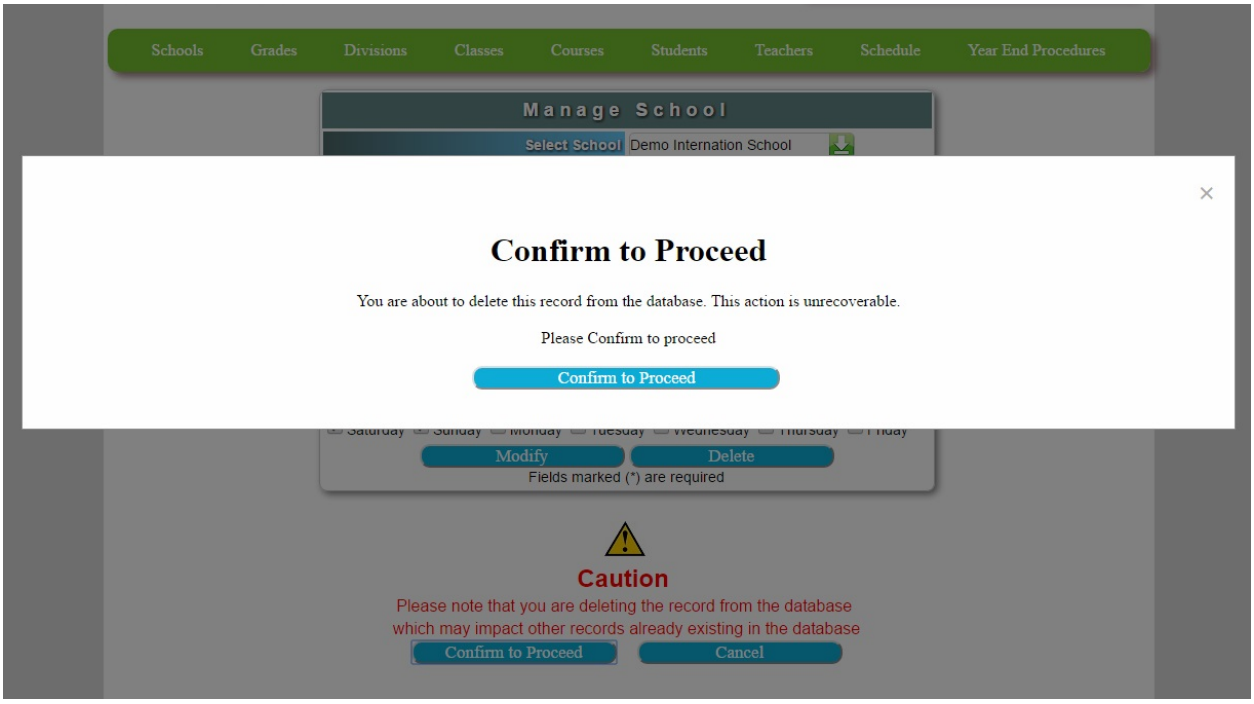
If the modification is successful, the system will respond with the following message:

In case you would like to delete a specific school, choose it from the drop down list and click on Delete button. In this case, the system will not immediately delete the school. Rather, it will display a Caution message as follows:



This will give you a chance to cancel the action if you don't really mean it. Please note that deleting a school will delete all the records related to this school such as grades, classes, students …etc. This action is unrecoverable, so once you deleted the school, there is no way to bring it back.

Because of this, the system will reconfirm the action even if you click on Confirm to Proceed button shown above. When you click Confirm to Proceed button, the system will again ask for further confirmation as follows:

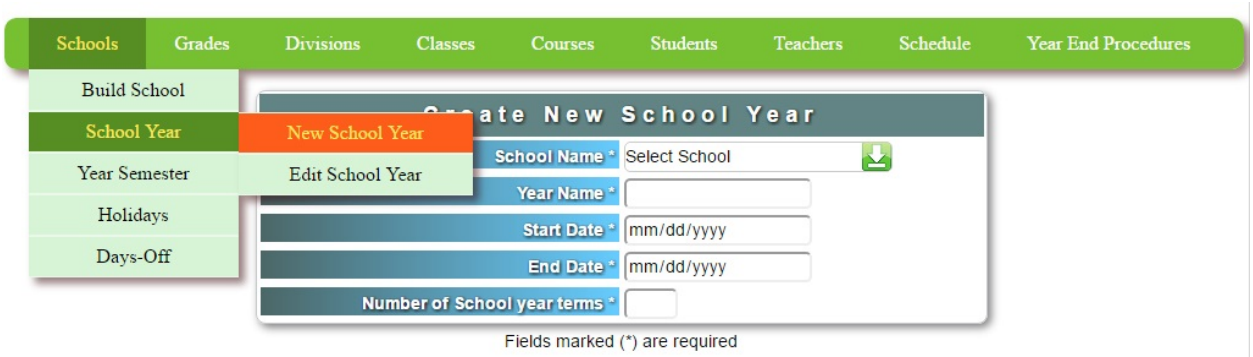


If you chose to proceed and clicked on Confirm to Proceed button, the system would permanently delete the school and display a confirmation message.

School Year

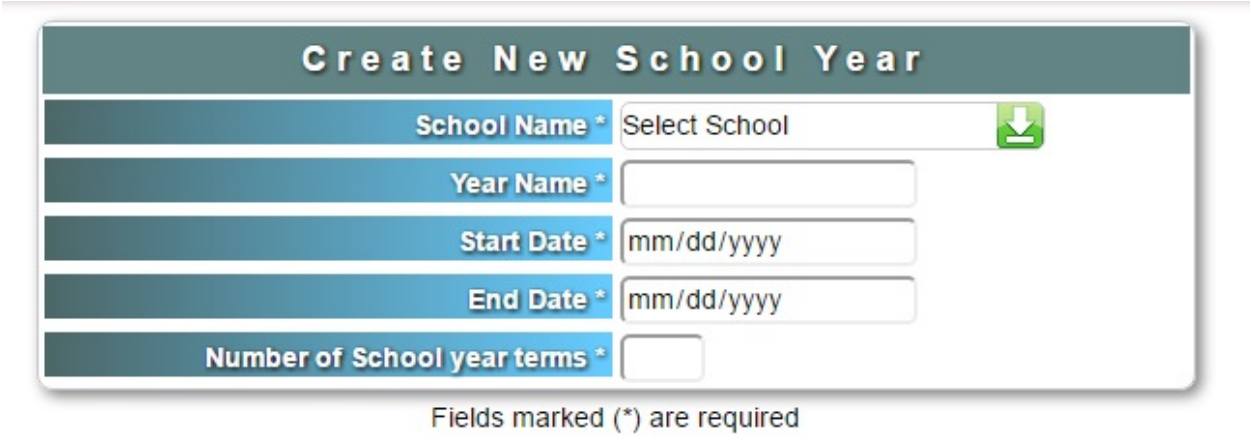
School Year module is responsible for creating and managing school years. Every year, the School Administration will have to create a new school year which has a start and end dates. The school year, in turn, might have a numbers of terms and each term will have to have start and end dates as well as vacation start and end dates.

To start working with the school year, you can go to Schools >School Year and choose New School Year.



New School Year

New School Year form will be displayed:



You can then enter the New School Year details such as the year name, start and end dates as well as the number of terms if they exist.

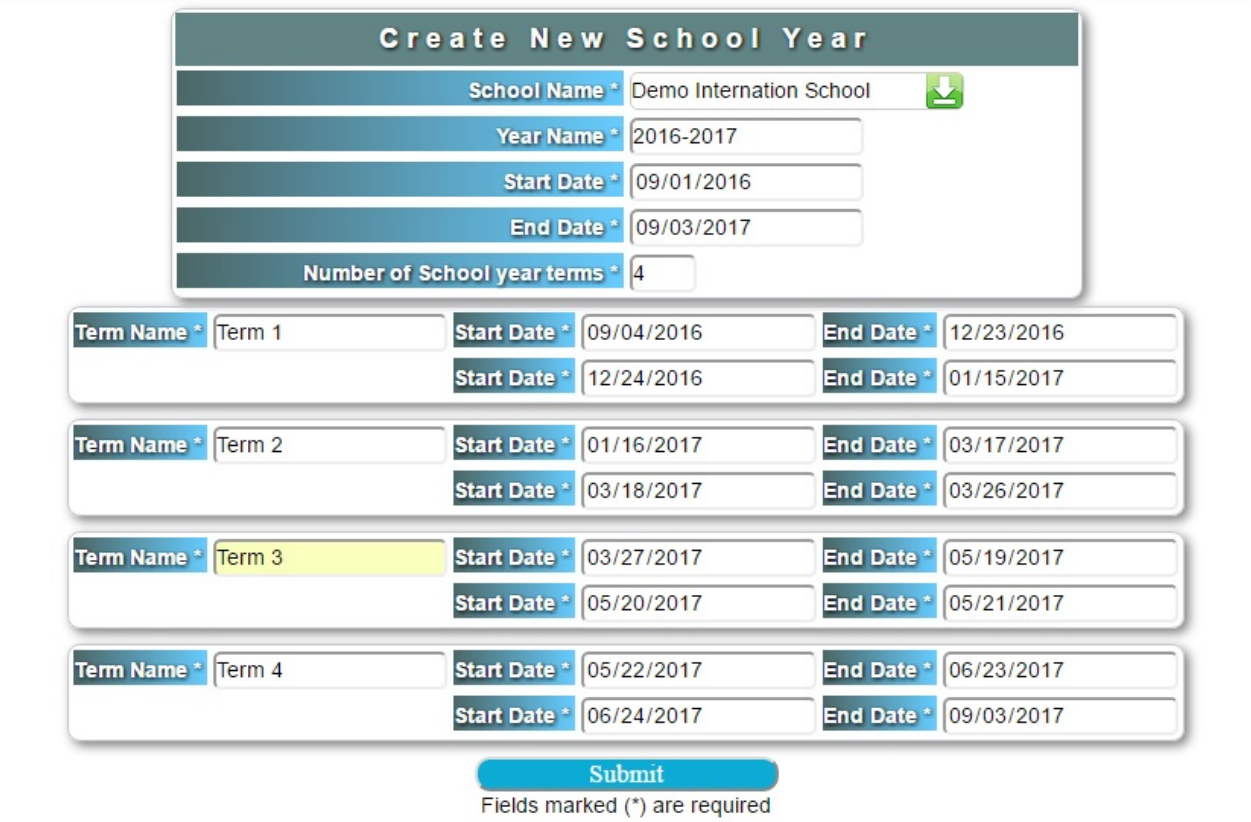
Please note the following:

Without the School Year, teachers will not be able to take attendance for or give assignments to the students.

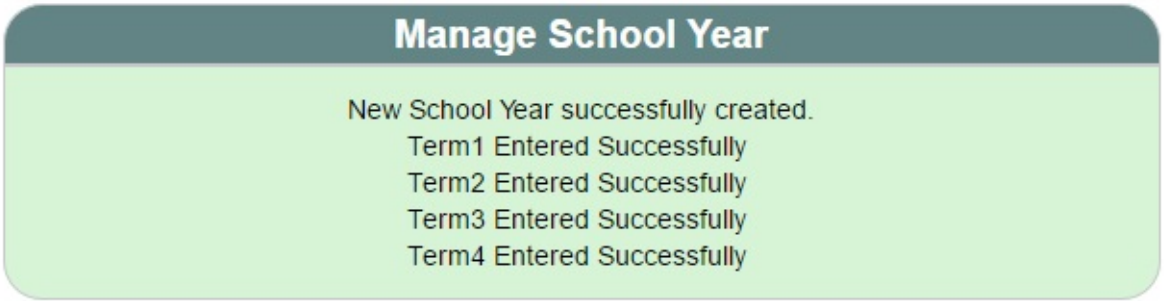
It's not possible to enter start date greater than the end date.

Although the Number of School year terms is a required field, you still can enter 0 if there are no terms under this School Year.

Now, let's fill the required fields to create the school year along with, for example, four-year terms:



Once you completed the form and clicked Submit button, the system will respond with the confirmation message as below:



Important Rules:

It's not possible to enter the year start date greater than the year end date.

No overlapping is allowed between school years.

It's not possible to enter start or end dates for any of the terms that are outside the scope of the School Year itself.

It's not possible to enter the term start date greater than the term end date.

It's not possible to enter the vacation start date greater than the vacation end date.

It's not possible to enter vacation dates less than the term start and end dates. Vacation has to come after the term is finished.

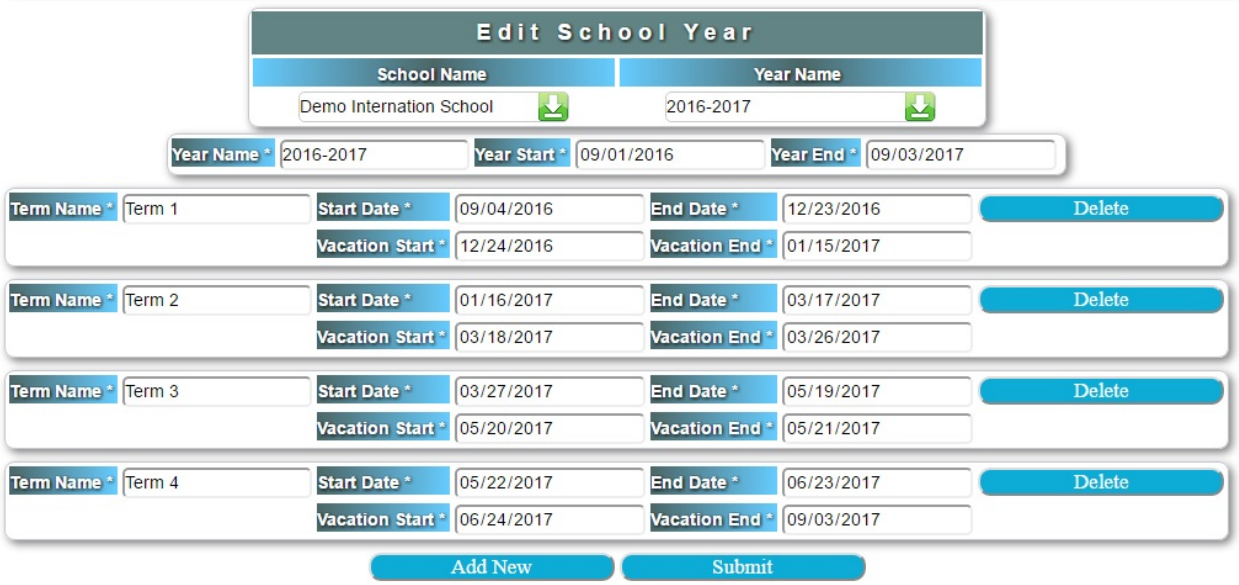
The system will not allow terms overlapping in terms of their dates.

You don't have to enter the terms in order of appearance. You just need to enter the dates of the terms the way you like and the system will automatically order them according to their dates.

Edit School Year

In case you would like to update the school year or its terms, go to Schools > School Year > Edit School Year as shown below:

Then you will need to choose the school from the drop down list and then select the year you would like to edit and the system will display the school year details as below:



In this form, you will be able to update any of the details that you have previously created. You will also be able to add new terms or delete already created terms.

Important Notes:

In case teachers have already taken attendance for the students or graded assignments that were given to a specific term, this term cannot be deleted and the delete button will not be displayed in this case.

When adding a new term, or modifying dates for the existing terms, the system will take into consideration the dates of the attendance taken and the assignments given and will never allow any of these attendances or assignments to be left without a term to cover them. In other words, attendances and assignments have to always be covered within a term.

Year Semesters

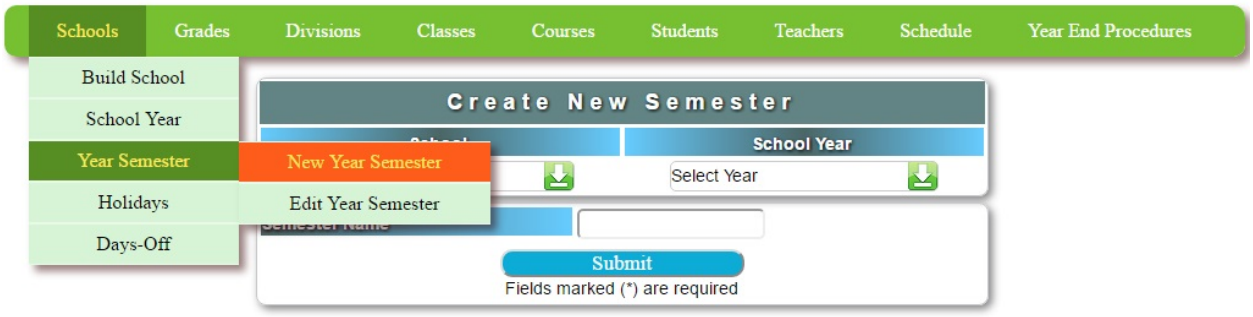
Year semester is part of the year that can cover one or more terms.

In our example, you can create two semesters; Semester I and Semester II and link Term 1 and Term 2 to Semester I and link Term 3 and Term 4 to Semester II.

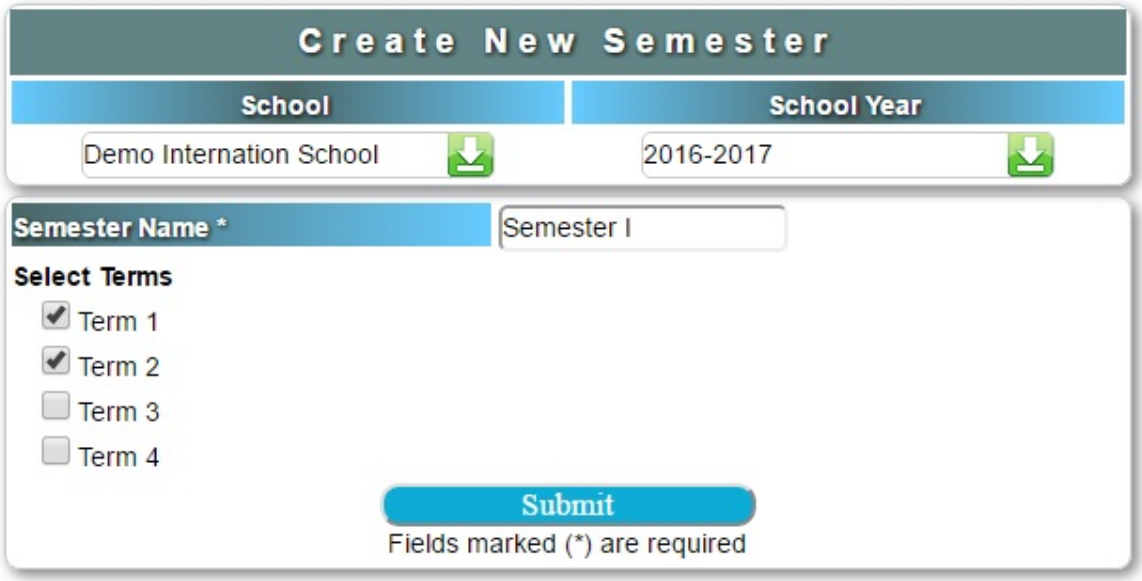
The system is flexible, so you can create any number of semesters you require and link any number of terms to the semesters as needed.

New Year Semester

Let's create two semesters; Semester I and Semester II. Go to Schools > Year Semester > New Year Semester as shown below:



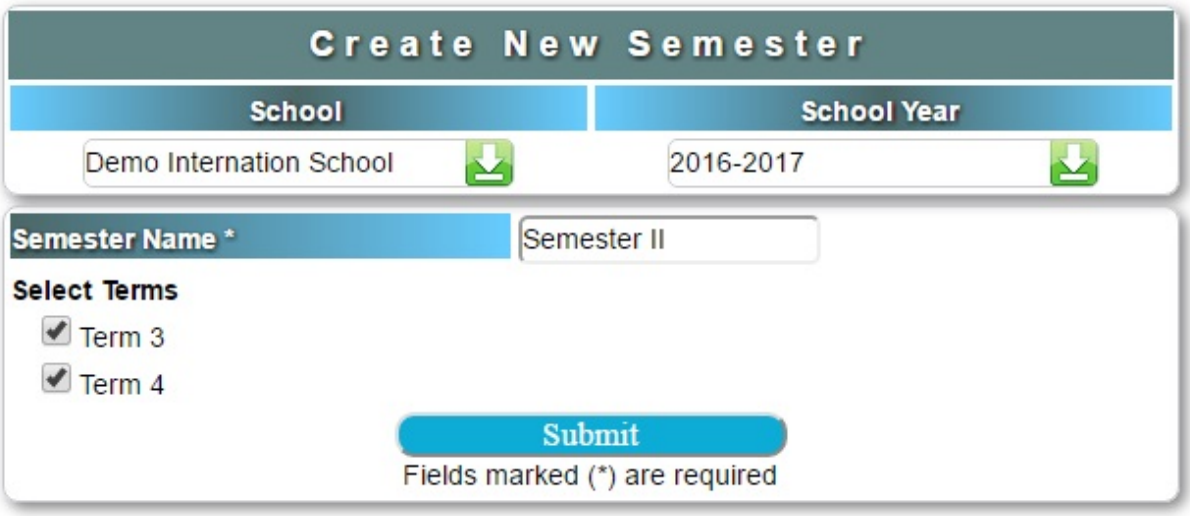
Then you select the school from the drop down list and select the school year from the second drop down list. Accordingly, the system will display the following form to create new semester:



As shown, you enter the semester name and select what terms you need to link to this semester.

Please note that once you linked some terms to a certain semester, these terms will not be available for any other semesters.

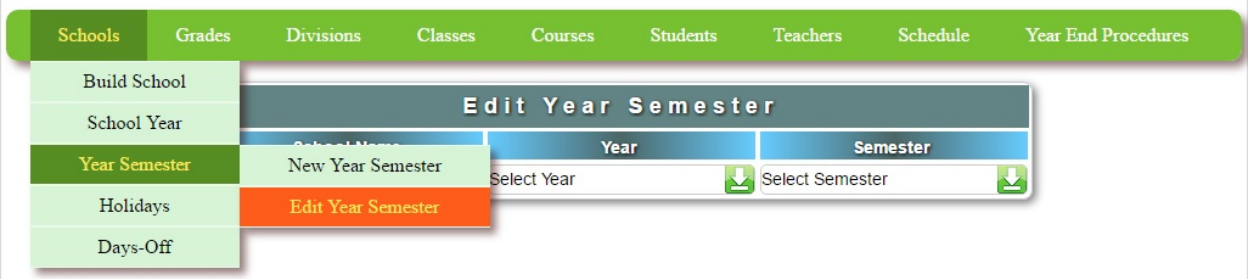
Therefore, when you create the second semester, you will notice that Term 1 and Terms 2 are not available to be linked to Semester II as follows:



Important Note: When you link some terms to a semester, the other terms have to be linked to a semester too. Otherwise, the Grading Report will not be displayed correctly.

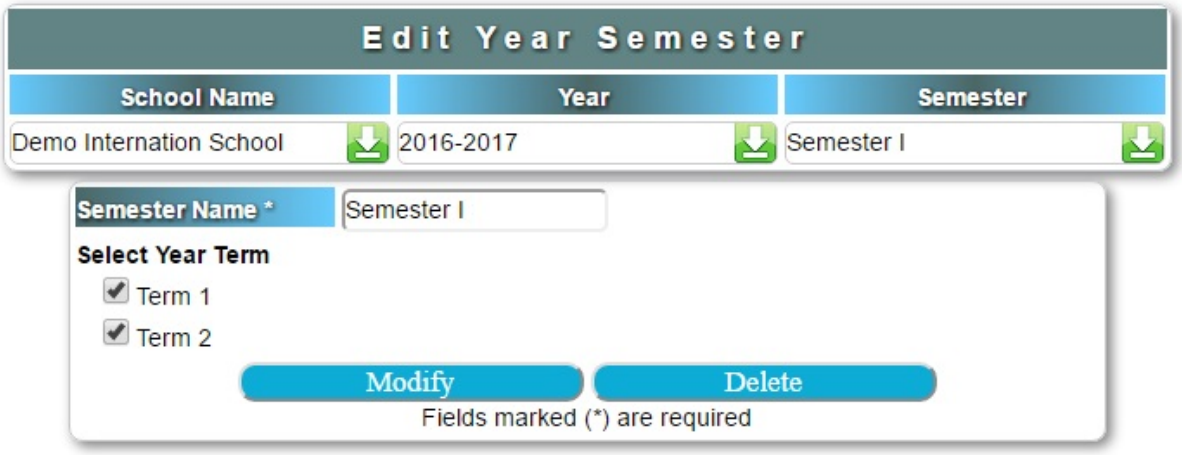
Edit Year Semester

If you would like to update any details related to the semesters, go to Schools > Year semester > Edit Year Semester as below:



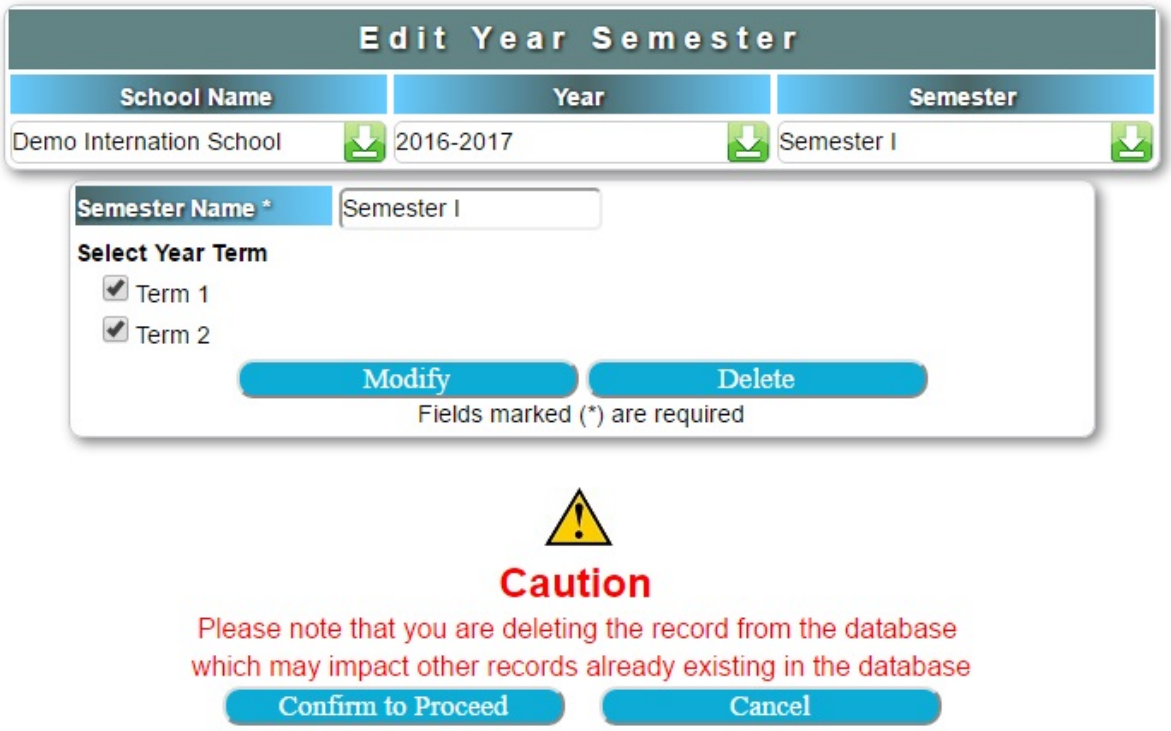
You will have a screen with three drop down lists as below:

You need to select the School and then the School Year and then the Semester from each respective drop down list. Accordingly, the system will display the Edit form as follows:

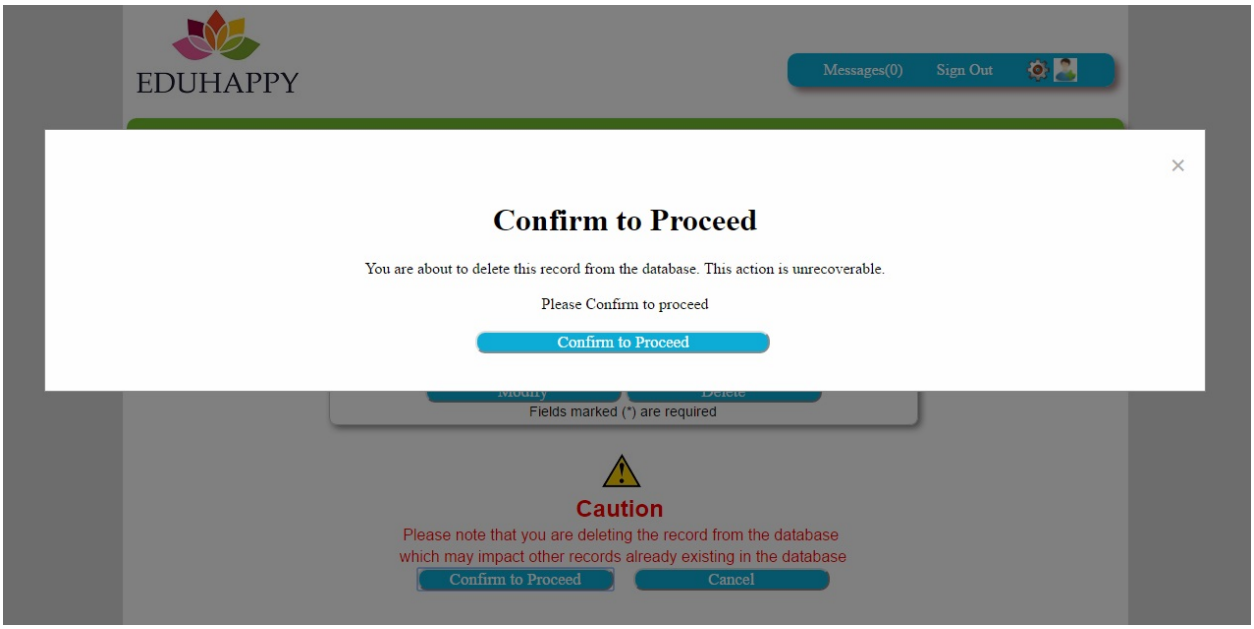


You can modify the details as required. Please note that when you deselect any of the terms, this term will be available to the other semesters.

You can also delete the semester when you click on the Delete button and the system will double confirm this action as follows:



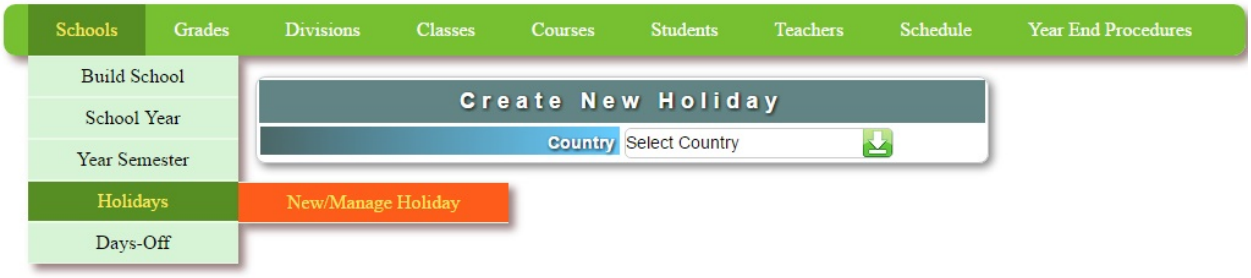
If you click on Confirm to Proceed, the system will display another confirmation message to make sure you really mean this action as follows:



If you click on Confirm to Proceed, the system will permanently delete the semester from the database.

Manage Holidays

You can manage National Holidays through Schools > Holidays > New/Manage Holidays as below:



A drop down list will be displayed for you to select the country for which you want to create National Holidays. Select one of the countries in the list and the system will display a field asking you to enter the number of Holidays you would like to create.

Depends on the number you enter, the system will display the same number of Holidays fields for you to start creating the National Holidays as below:

You will be required to enter the name of each Holiday along with the start and end dates.

You can't enter start date greater than the end date.

After you fill in the form you need to click Submit button to create the Holidays:

The system will then respond with the following confirmation message:

Once the Holidays for this specific Country have been created, the next time you select the same country you will get the Holidays you have previously created and you will be able to update any of the holiday's fields as required. You will also be able to add new holiday or even delete an existing one.

Important Rules:

The Holiday you create will affect the attendance system in which the teachers will not be able to take attendance for the students in these holidays dates. However, teachers will still be able to give assignments on these dates.

Whenever the teachers have taken attendance in one of these Holidays dates, you will not be able to delete this Holiday and the Delete button will not be even displayed in this case.

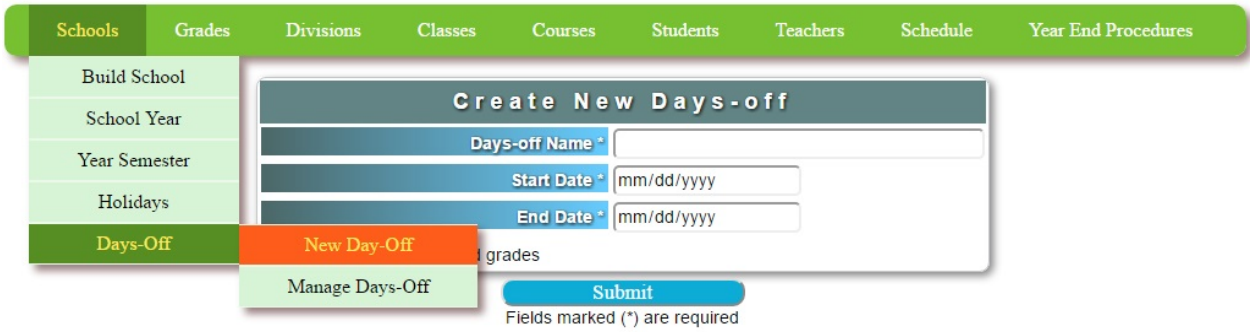
Holiday Start date cannot be greater than Holiday End date.

Holidays can overlap and many Holidays can even have the same start and end dates.

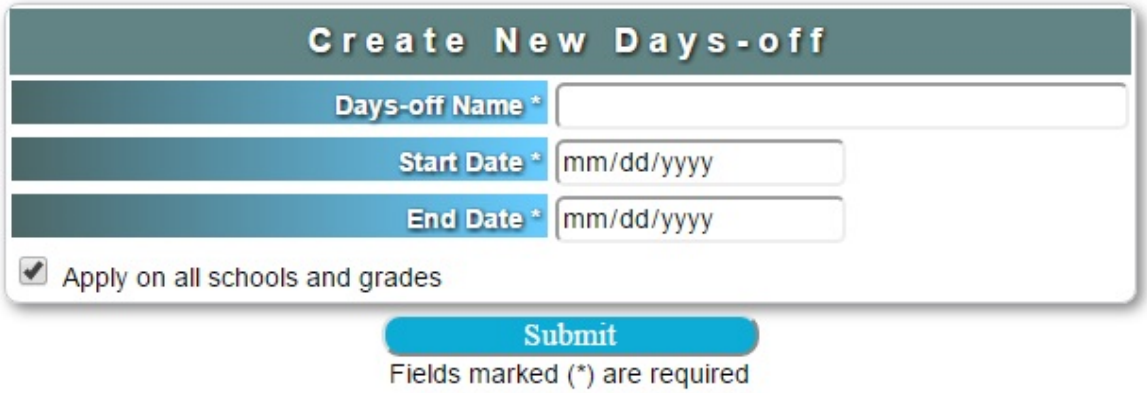
Days Off

Days-off will give you the possibility to specify dates in the system which are not vacations or Holidays. These dates might be unexpected events that the school has not planned for and these events require the school to take these days off. In this case, you can create the Day-off in the system by specifying the date that the school will be off.

To access the Days-Off, please go to Schools > Days-Off > New Days Off



The system will display the Days-off form as below:



You will be required to enter the name of the days-off and specify the start and the end date.

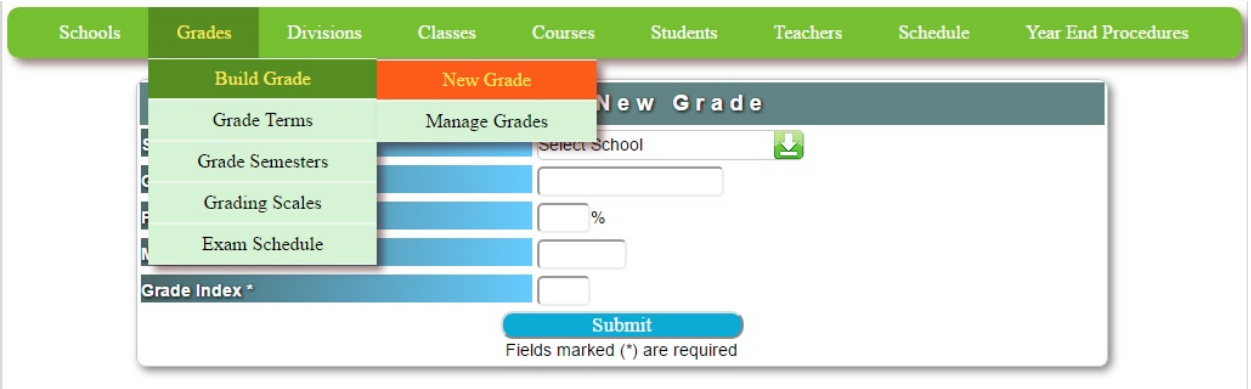
You will also be able to choose whether this days-off are applied to all schools and grades under your account or they will apply to only some specific schools and grades. Just leave the checkbox "Apply on all Schools and grades" checked if you would like to apply the dates on all schools and grades or otherwise uncheck this checkbox and you will be able to choose what schools and grades to apply these days-off dates. As for now, since we haven't created any grades under our demo school, unchecking this box will not show any grades. Please return back to this option when you create some grades.

Grade Management

The Grade Management System will allow you to create grades under the school and manage them as needed. These grades, for K-12 schools, for example, will start from KG1 and KG2 until Grade 12. However, there is no limitation on the number of grades you would like to create in the system.

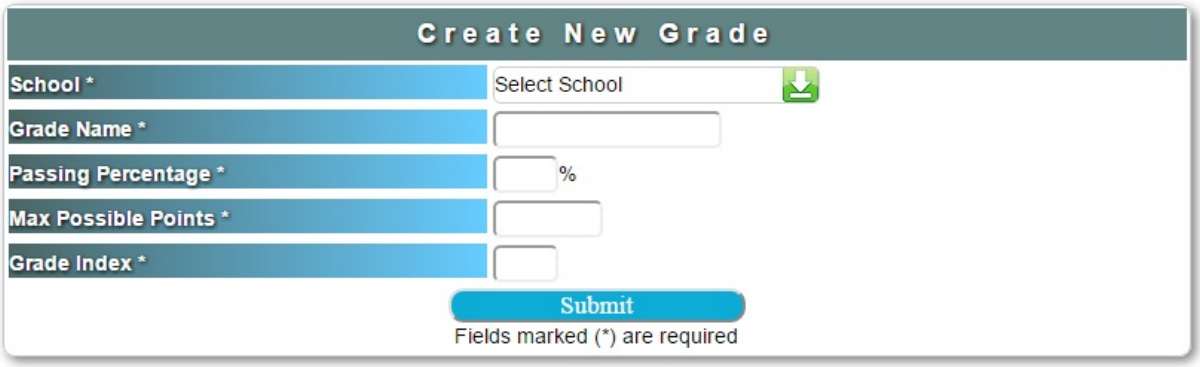
Build Grade

In order to create new Grade, Please go to Grades > Build Grade > New Grade as below:



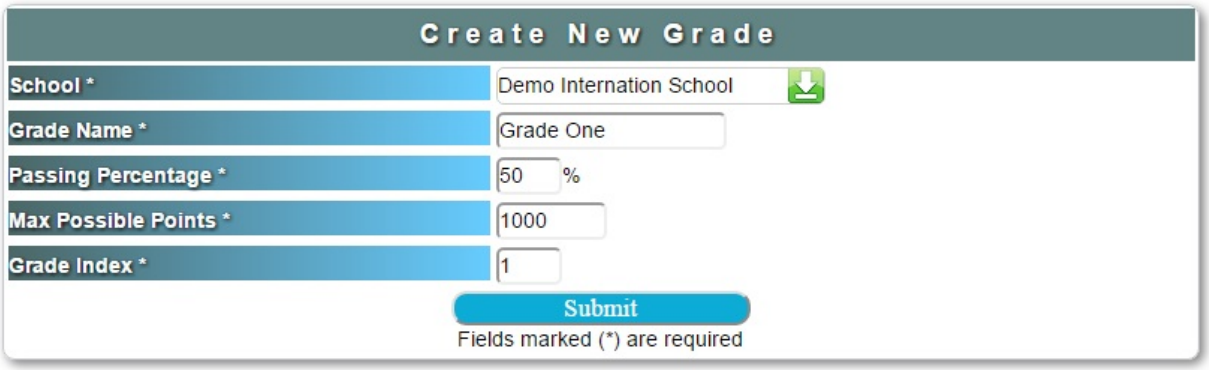
New Grade

The New Grade form will be displayed as below:



You will need to fill in the required details. Select the school under which you want to create the grade and enter the Grade Name and the other required fields. Let's create three grades under our demo school to explain how grades are created.

Let's start with the first grade and we will call it Grade One.



You can notice the Passing Percentage field and we have put 50%. That means that the students in that grade, in order to qualify to the next grade, i.e., to be promoted to next grade must achieve at least total overall percentage of 50%. The total Grade percentage is being calculated automatically by the system as we will explain in the Grading System calculations later. Note that Passing Percentage varies between 0% and 100% and it cannot be less than 0% or greater than 100%.

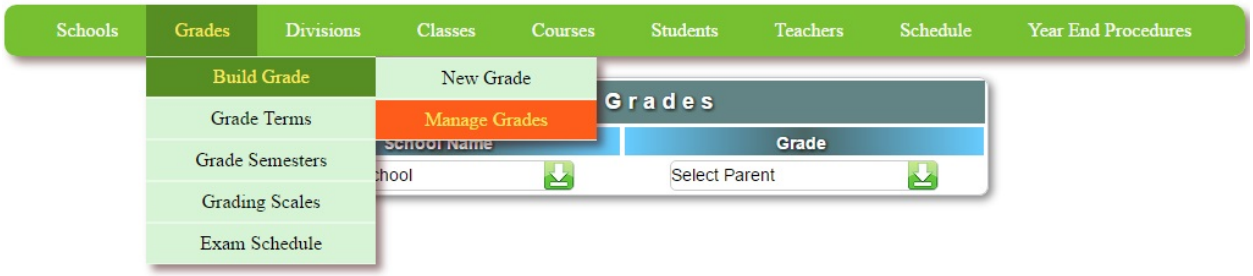
"Max Possible Points" field determines the total number of points that students achieve based on the overall grade percentage. For instance, if the student achieves 90% as Overall Grade percentage, then it will be translated as 900 out of 1000 if the Max Possible Points is 1000. This will be elaborated more in our further Grading System Calculations later in this guide.

Grade Index field is responsible for the order of the grades. So for example, Grade One should take index 1 and Grade two should take index 2 and so on till Grade Twelve which should take index 12. For KG1 we recommend giving it index (-1) and for KG2 we recommend giving it index (0). Based on that index, the student promotion at the end of the year can take place as we will explain in the Year End Procedure section. For instance, if the students of Grade one to be promoted to the next grade, the system will look for the next grade based on the index. So, if the current index is 1, the system will look for the higher index and if found Grade Two with index 2 the system would promote the qualified students from Grade one to Grade two. Of course the system will not dictate an indexing option; instead, the system leaves it to the school administration to decide what indexing they would like to follow. Please note that Grade Index is unique under the same school and the system will not allow duplicate index. Please also note that Grade Name is also unique under the same school.

Once you filled in all the required fields, click Submit button to create the grade. System will respond with the following message:

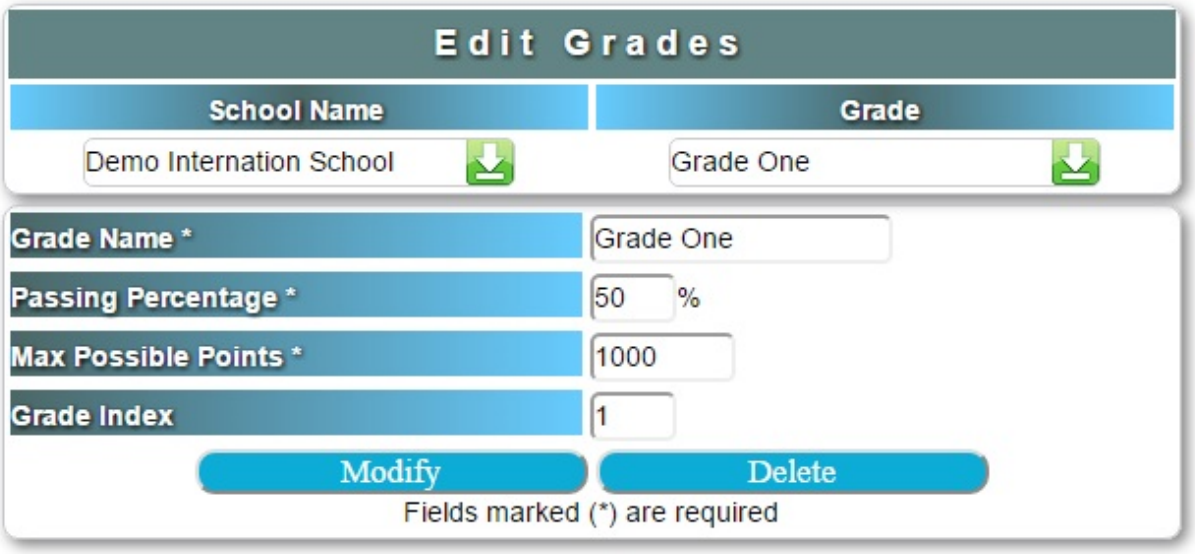
Manage Grade

In order to update the Grade details through Manage Grade option. Go to Grades > Build Grade > Manage Grade as follows:



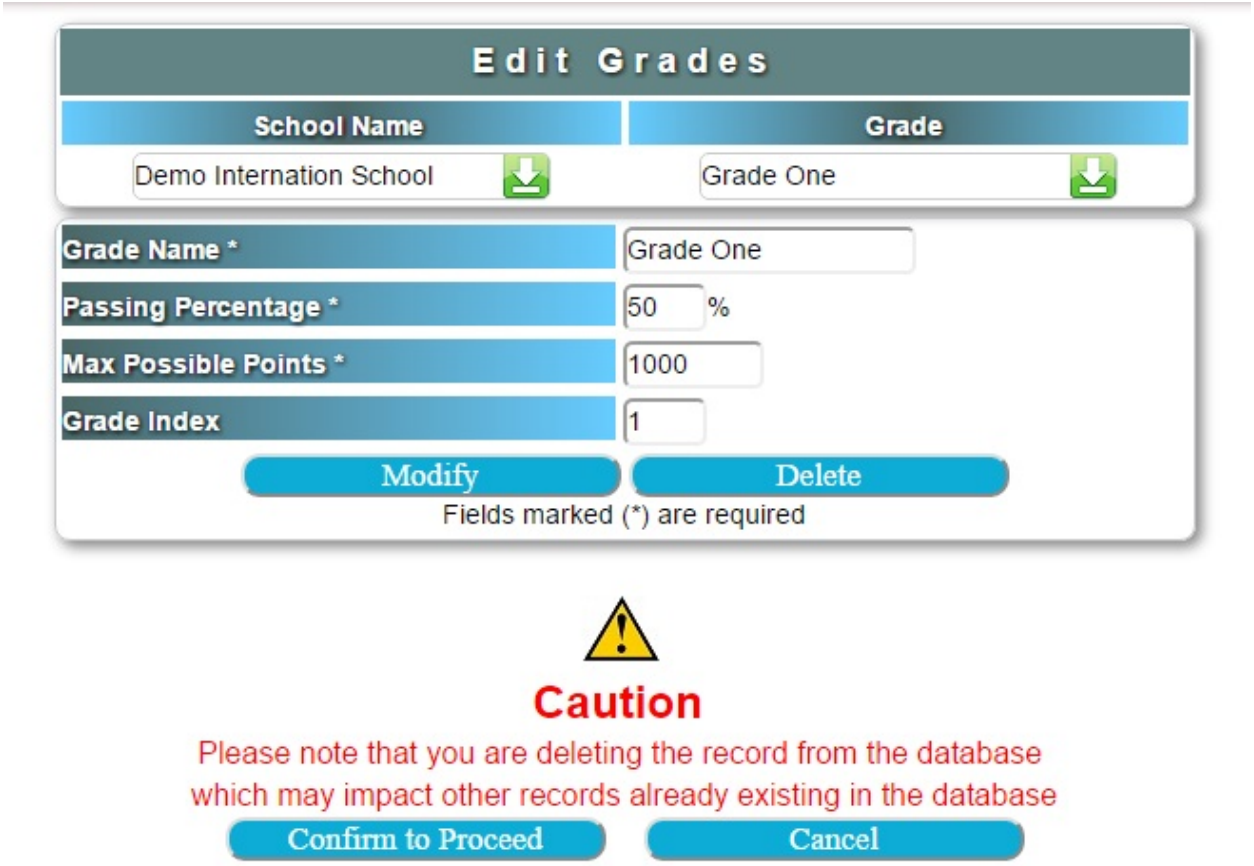
Two drop down lists will be displayed, one for Schools and one for Grades.

First select the school and then select the grade to manage. System will display the ***Edit Grade*** form as below:

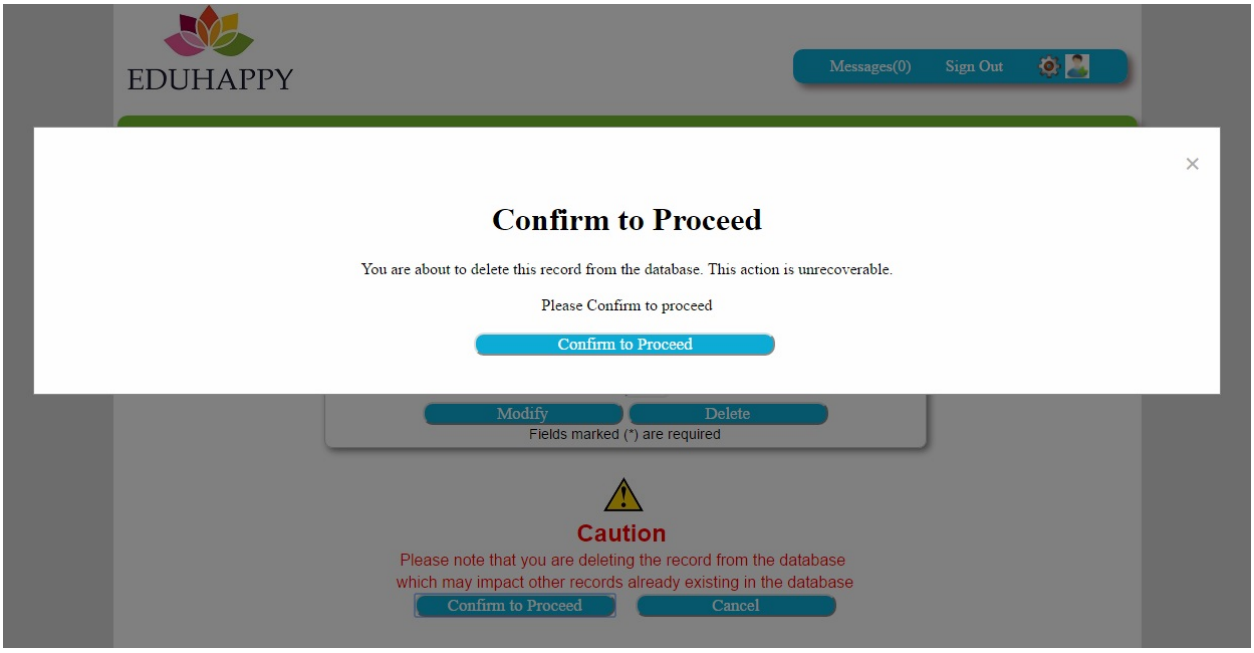


You can choose to update any of the previously created fields and click Modify to save changes. System will respond with the following message:

You can also choose to delete the grade. Click on Delete button and the system will respond with Caution message as follows:



If you click on "Confirm to Proceed" button, the system will respond with another confirmation dialog box to make sure that you really mean this action:



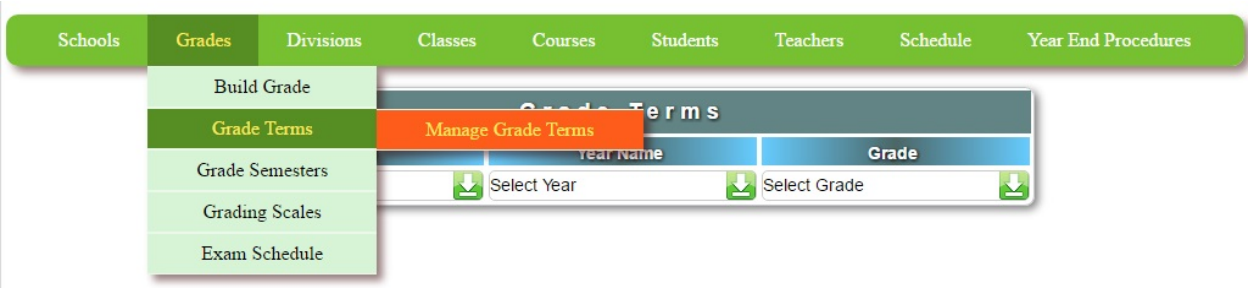
If you click on "Confirm to Proceed", the system will permanently delete the grade and all its related records from the database. Please note that this action will delete the grade and all related records such as classes under this grade, courses and related content under this grade, and all the students grading marks for attendance, assignments, semester exams, etc. This action is unrecoverable, so please make sure you really need to delete the grade before taking such an action.

Grade Terms

Manage Grade Terms

We have explained before how to create and manage School Year Terms which will be generalized on all grades created under this school. Now, in case you have a specific grade which has its own terms different than the school year terms, the system will give you the flexibility to create terms specific to this grade. These terms will supersede the school year terms for that specific grade.

In order to create Grade Terms, go to Grades > Grade Terms > Manage Grade Terms

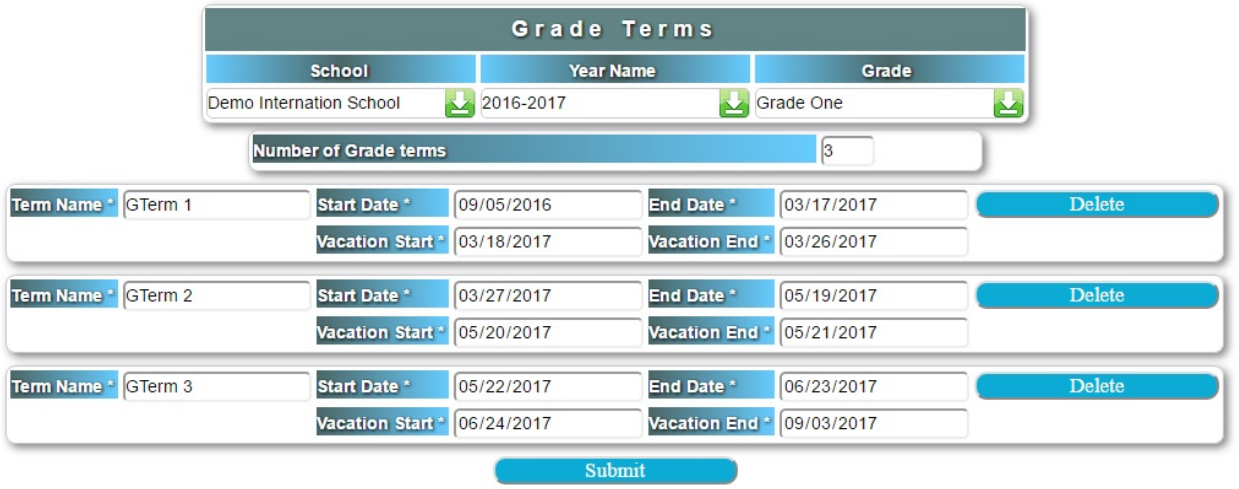


You will then get three drop down lists as below:

You will need to select school, school year, and then the grade under which you will create the new terms. The system will display a field requesting to enter the number of terms:

Based on the number of grade terms you entered, the system will display the Grade Terms fields to create. You will need to follow the same steps and rules mentioned in the School Year Terms that we have explained earlier.

Let's create three terms under Grade One.



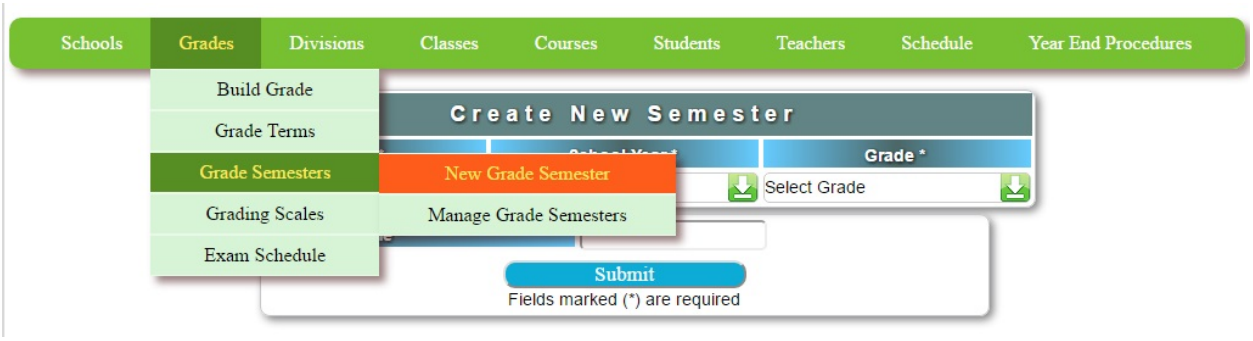
This will help us to explain the following section regarding the Grade Semesters.

Grade Semesters

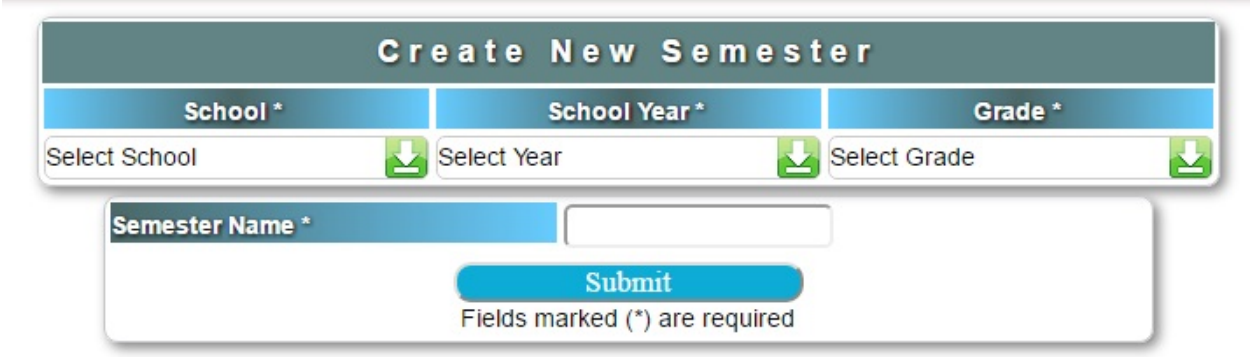
We also have explained how to create and manage School Year Semesters which will be generalized on all grades under this school. Now assume you have a specific grade with a different structure for the semesters. The system will give you the flexibility to create specific semesters to this specific grade which will then supersede the school year semester. In fact, when you decided to create special terms for a specific grade different than the school year terms, then you will need now to create special semesters under this grade which will be linked to those grade terms we have created earlier.

New Grade Semester

To create new grade semesters, go to Grades > Grade Semesters > New Grade Semester:

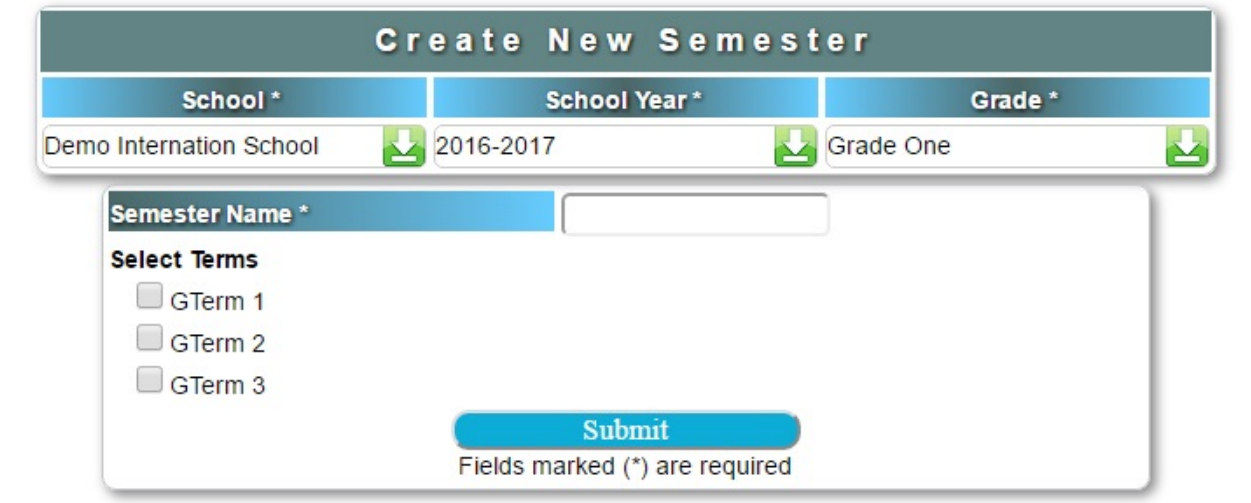


You will have the following form:



Select the school, school year, and then select the grade under which you need to create the semester.

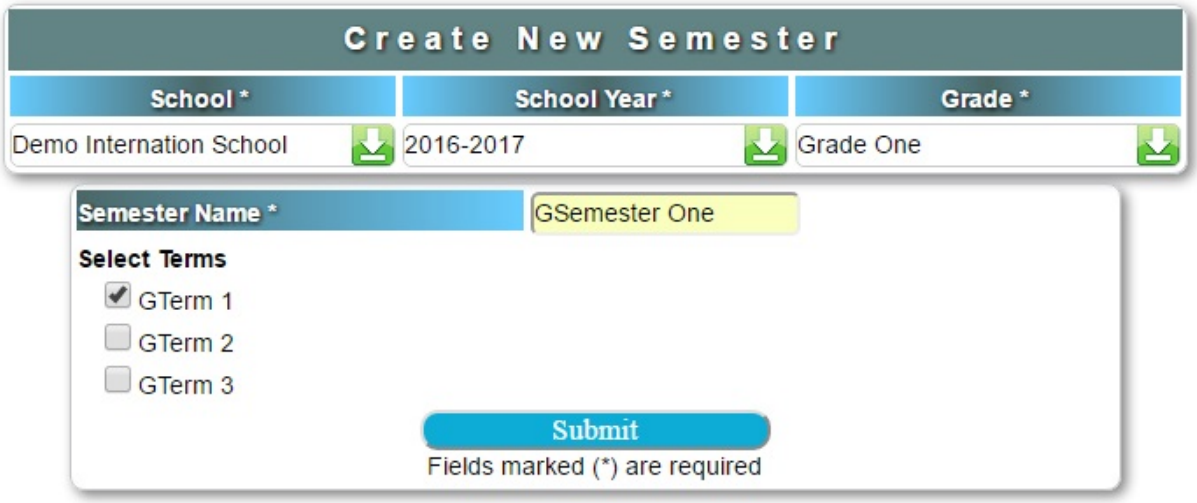
The system will display the following form which also includes the terms of the selected grade:



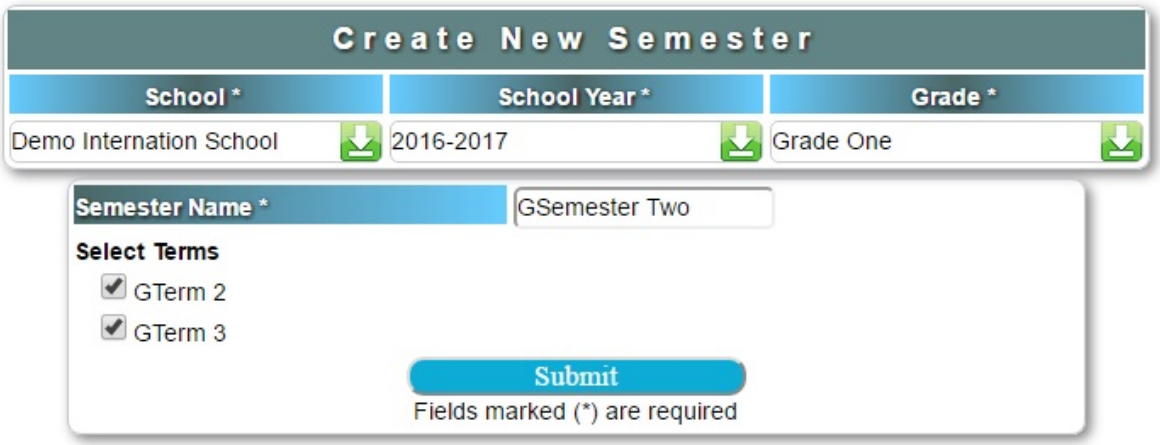
Enter the semester name and select the related terms that you need to link the semester to. Click Submit button to create the new semester.

Important Note: When you link some terms to a semester, the other terms have to be linked to a semester too. Otherwise, the Grading Report will not be displayed correctly.

Below is an example screen to create the first-grade semester:

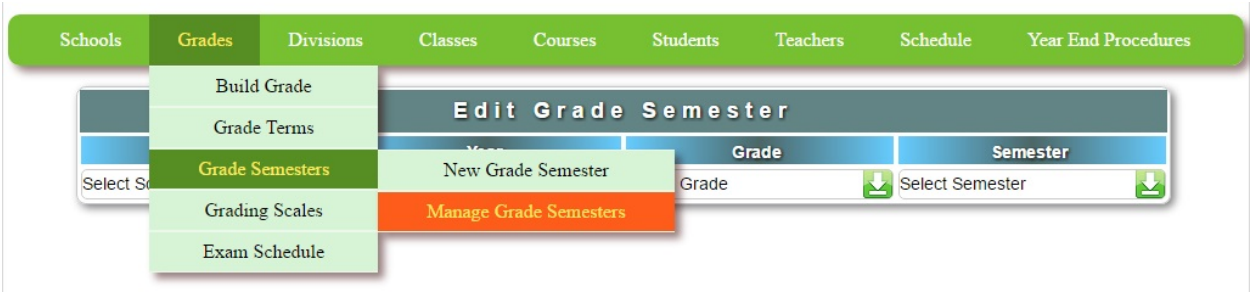


Another screen for the second-grade semester:

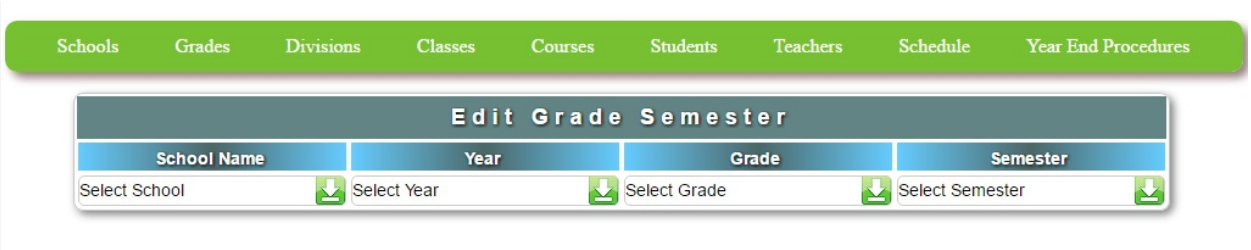


Manage grade semester

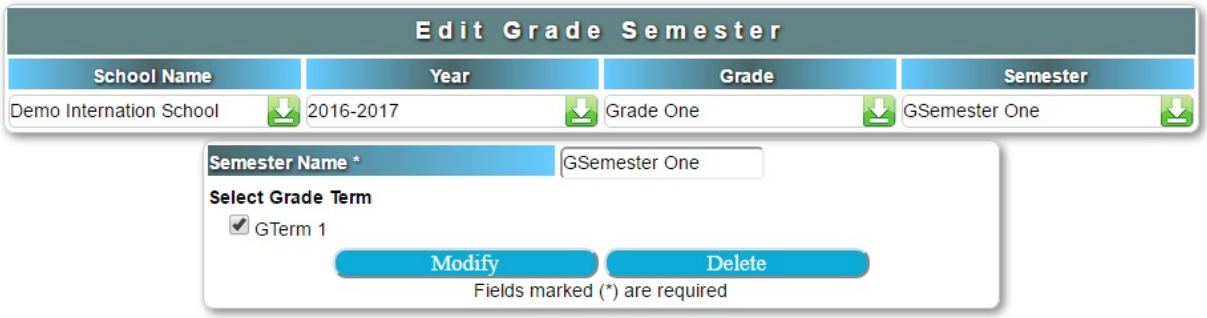
Now, if you would like to update these grade semester, please go to



Four drop down lists will be displayed as follows:



You will need to select the school, school year, grade, and the semester that you need to modify. System will respond with the following form if you select one of the previously created semesters to edit:



You can change the semester name and / or select or deselect grade terms based on the terms availability. Once you click Modify button, changes will be saved to the database.

If you need to delete a semester, you can click on Delete button and the system will respond with a sequence of confirmation messages and dialogs to make sure that you really mean this action which is unrecoverable as we have explained many times earlier.

Grading Scales

This feature will allow the school administration to create grading scales for each grade in the school.

With grading scale, we mean the letter or the word or may be the level that is mapped to a certain range of grading percentage. For instance, a letter A+ may represent any grading percentage between 95% and 100% while letter A may represent any grading percentage between 90% and 94%. This Grading Scale, if defined, will be displayed in the grading report next to each percentage that the student achieves per course in the terms, the semester exams, total semester grade, or the final course grade.

Important Rules:

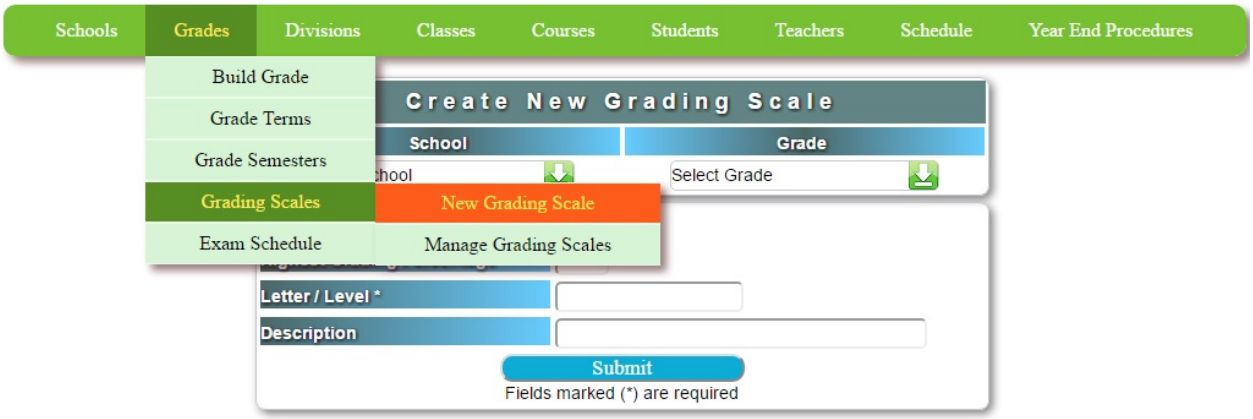
Grading Scales cannot overlap with each other.

Lowest Grading Percentage cannot be greater than the Highest Grading Percentage

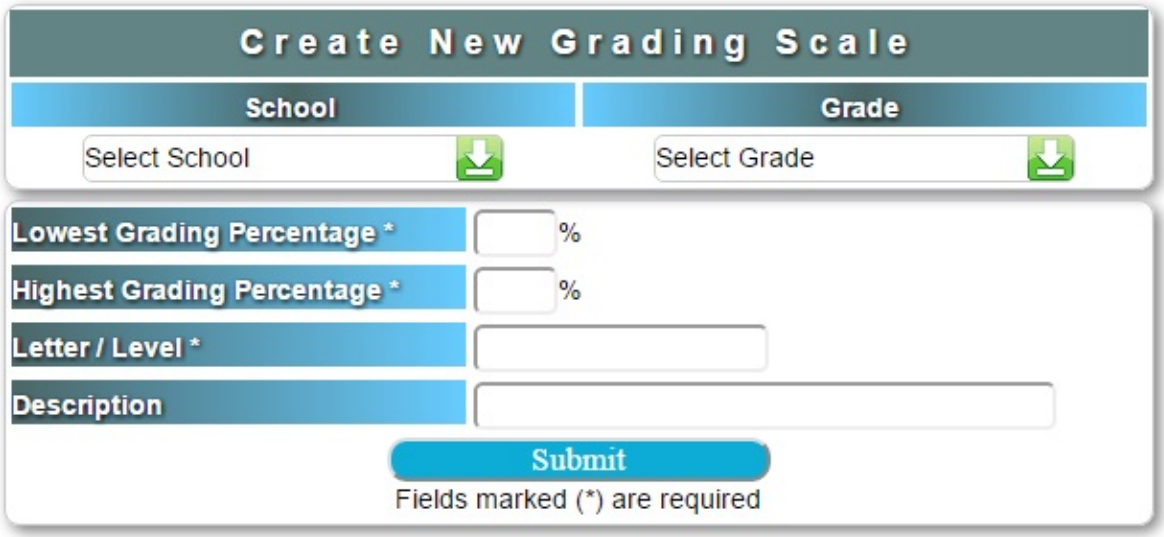
Each Grade in the school will have its own Grading Scale. For instance, Grade One will have its own Grading Scale and Grade Two will also have its own Grading Scale even if those Grading Scales are similar. This is to give the ultimate flexibility of defining and managing the grading scales for each Grade.

New Grading Scale

In order to create new Grading Scale, go to Grades > Grading Scales> New Grading Scale:

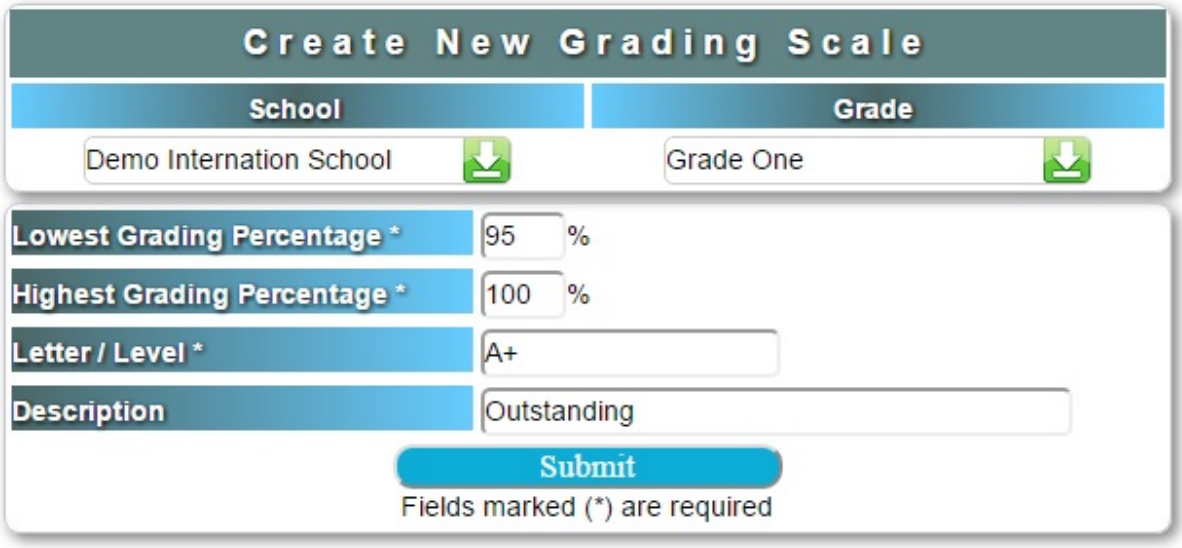


You will be presented by the following form to create the new grading scale:

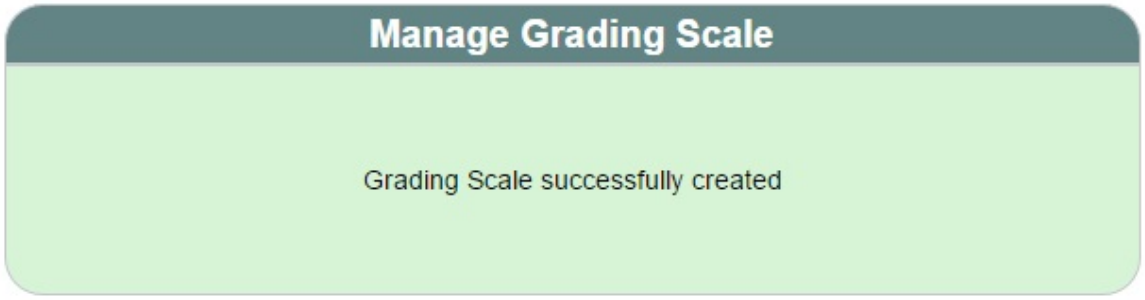


You will need to select the school and the grade under which you want to create the grading scale.

Fill in the form and click Submit button to create the new grading scale.

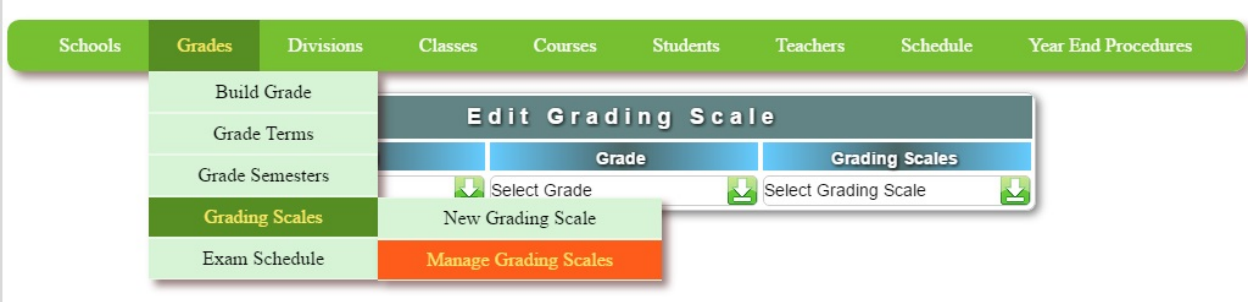


System will respond with the confirmation message as below:

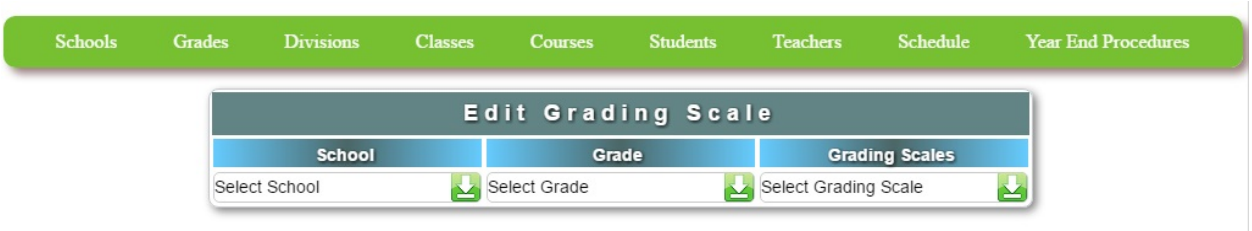


Manage Grading Scales

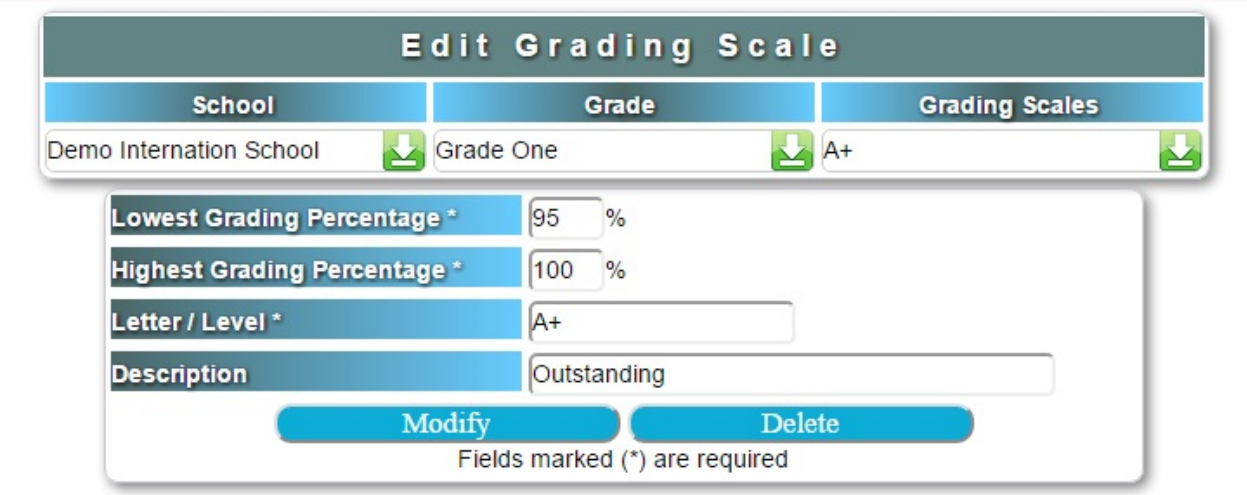
In order to edit grading scale, go to Grades> Grading Scales > Manage Grading Scales:



You will get three drop down lists as follows:



Select School, Grade, and the Grading Scale you would like to edit. System will display the following form for you to update any of the fields you have previously entered as below:



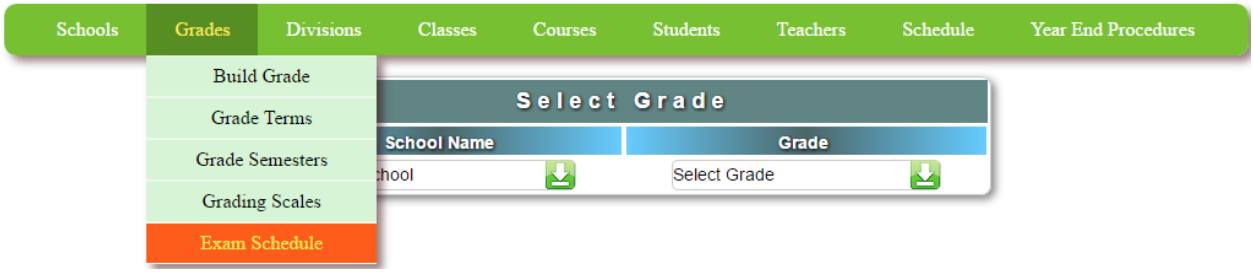
After you finish updating the form, click on Modify button to save changes to the database.

If you would like to delete a grading scale, click on the Delete button and the system will respond with a sequence of confirmation messages and dialogs to make sure that you really mean this action which is unrecoverable as we have explained many times earlier.

Exam Schedule

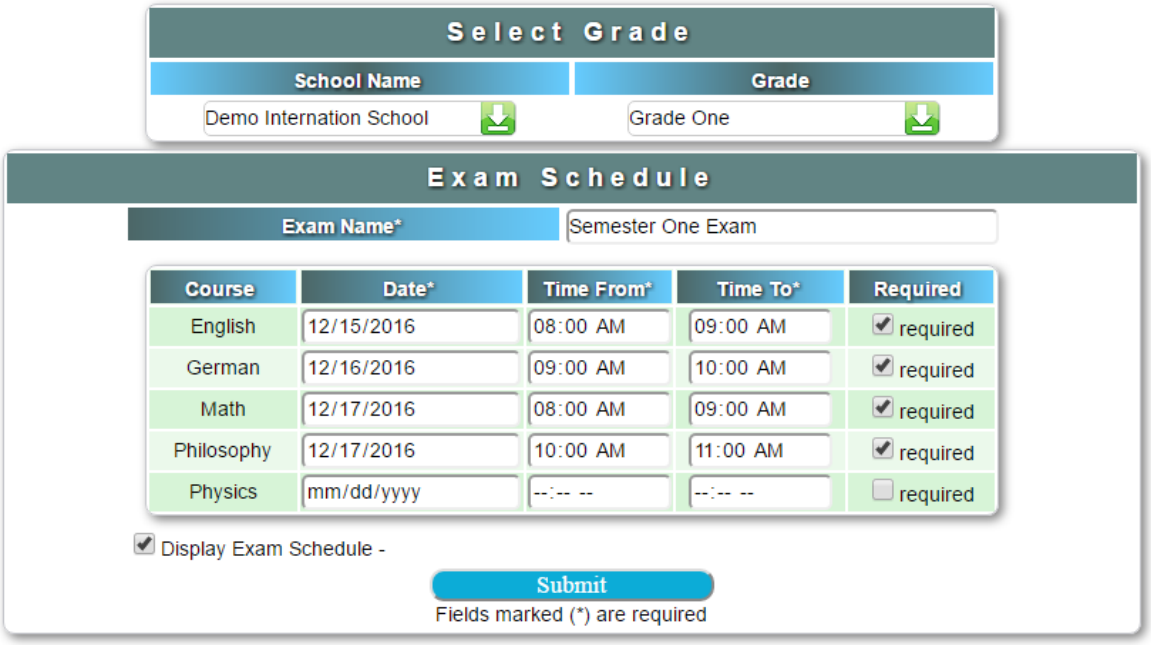
Exam Schedule belongs to a Grade. For each grade, you can generate the exam schedule that will be displayed to the students in the Student Portal to give the students information about the exam date and time for each course. It is only one Exam Schedule per grade at any time. Therefore, you will always need to overwrite any previously created exam schedule in order to create a new one.

To create Exam Schedule, go to Grades > Exam Schedule as follows:



You will get two drop down lists to choose from:

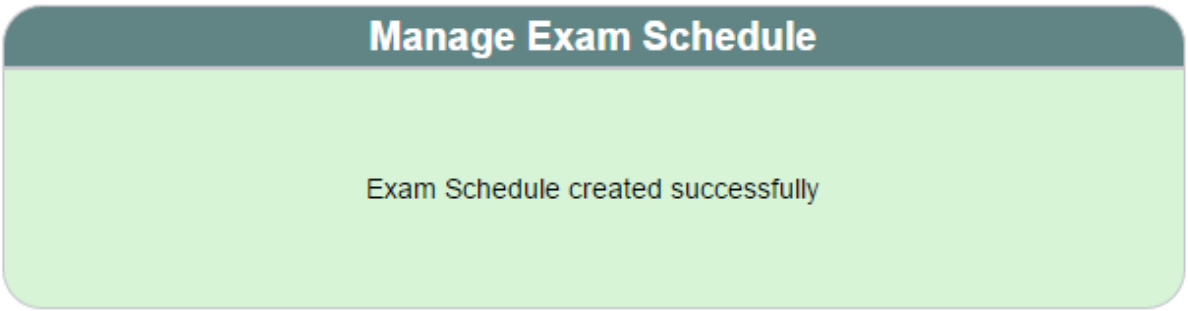
Select the school and then select the Grade under which you want to generate the exam schedule. You will get the following form. Enter the date and time for each course:



If one or more of the listed courses are not required you just need to deselect the checkbox named “required”.

If you would like to display the exam schedule, check the “Display Exam Schedule” checkbox which is checked by default. Otherwise, you can uncheck this field and the system will not display the exam schedule in the Student Portal.

When finished, click Submit button and the system will respond with the following confirmation message:

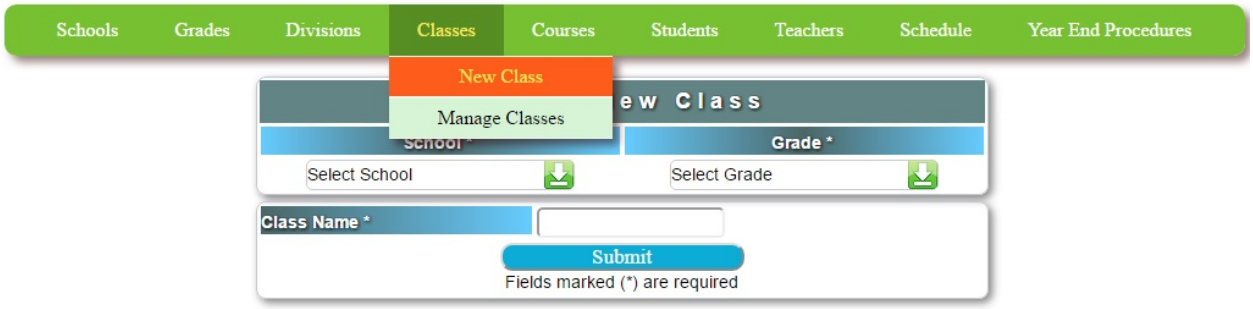


Class Management

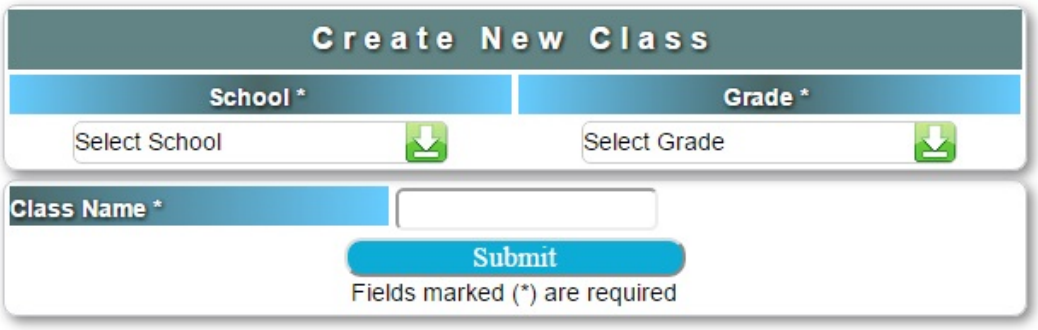
The class is a physical grouping of students under the grade. The grade can include a number of classes. Students under this grade will be distributed into these classes. This distribution depends on the school administration and the system is not handling how students are being distributed over the classes under a certain grade. For instance, students can be classified based on alphabetical criteria or they can be classified based on their performance and grading percentages. Under any conditions, school administration will need to create classes under the grade and the system provides the ability to do so.

New Class

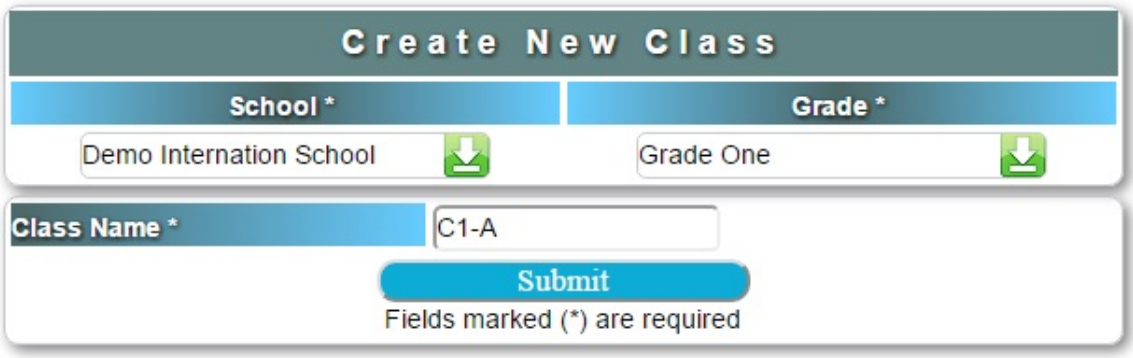
If you need to create new class, go to Classes > New Class:



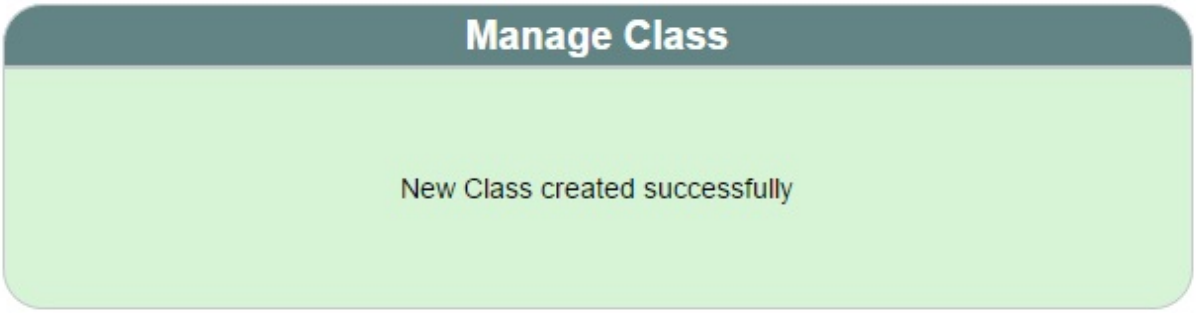
The system will display the New Class form in which you will need to select the School and the Grade under which you need to create the class.



Select the school and the grade and then enter the class name. when finished, click Submit button:

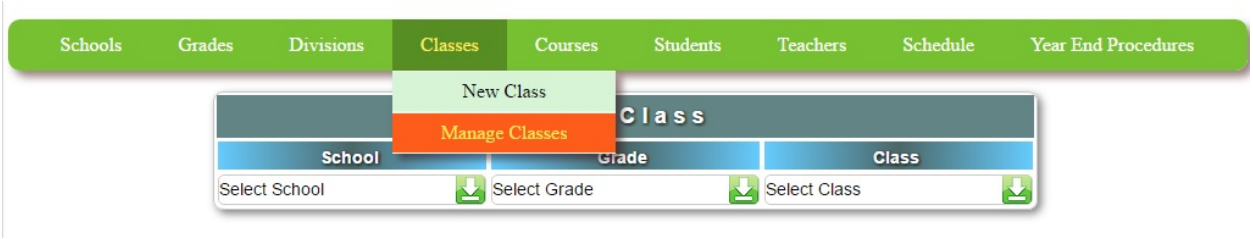


The system will respond with the confirmation message:



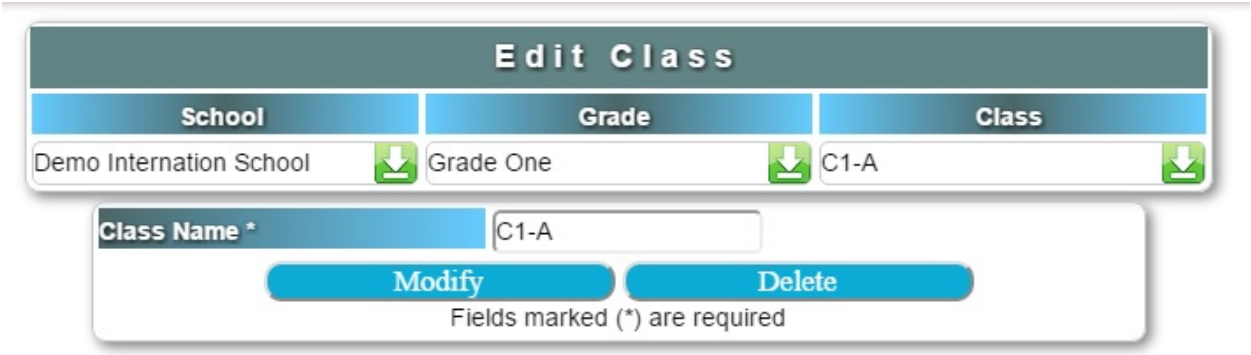
Manage Class

If you need to edit the class name, go to Classes > Manage Class:



You will three drop down lists as follows:

Select the school, the grade, and the class you would like to edit and the system will display the edit form for you to update the previously entered information.

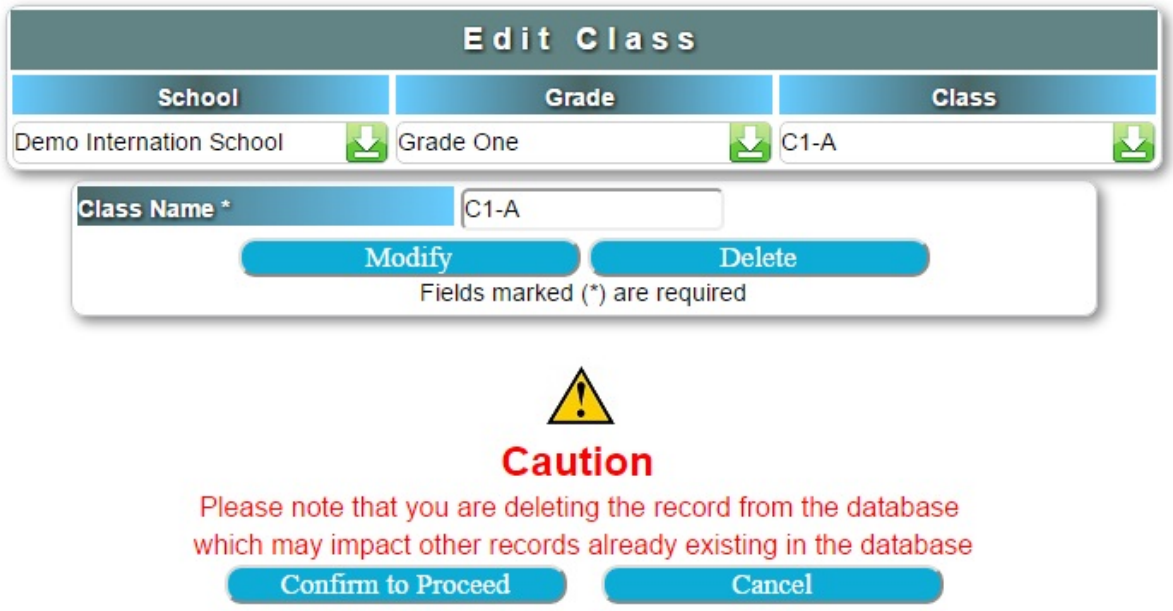


Once finished updating the class name, click on Modify button to save changes.

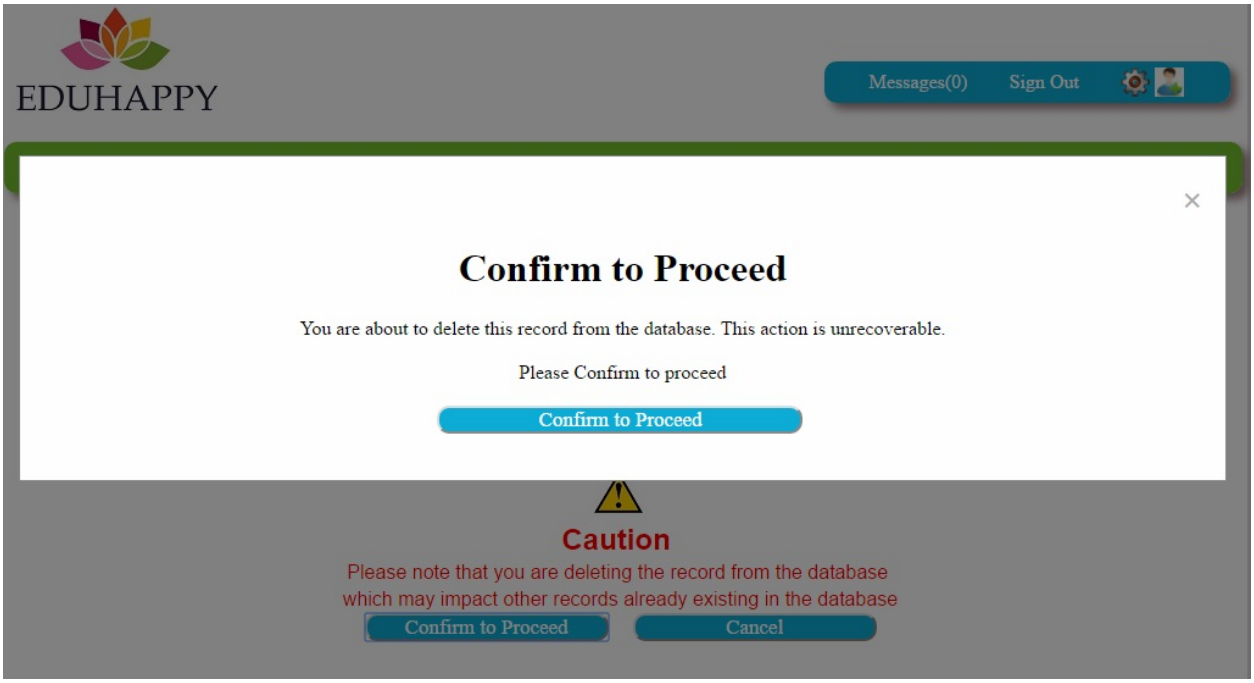
In case you have added courses and assigned teachers to that class then the above screen will be displayed as follows:

If you want to delete the class, click on Delete button. Please note that delete option, as well as delete button, will not be available if there are students in this class. In this case, you can only update the class name.

If you click on Delete button, the system will respond with a caution message:



If you click on “Confirm to Proceed” button, the system will respond with a dialog box for double confirmation:



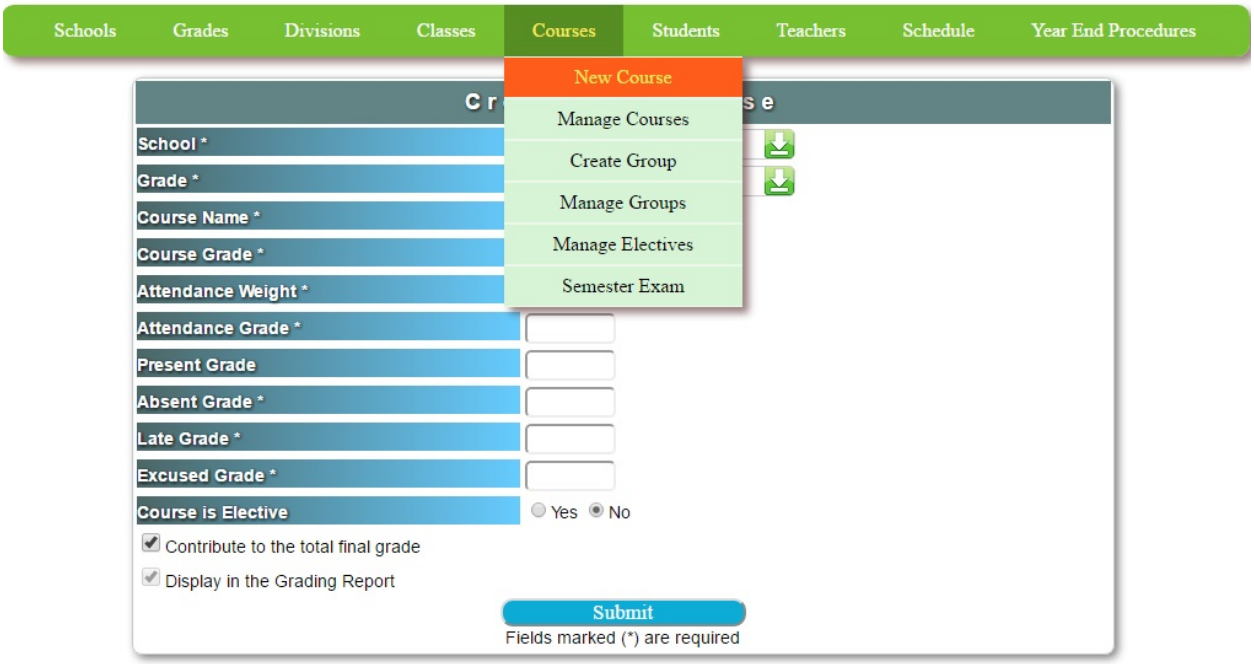
If you click on “Confirm to Proceed” button in the dialog box, the system will delete the class permanently. This action is unrecoverable.

Course Management

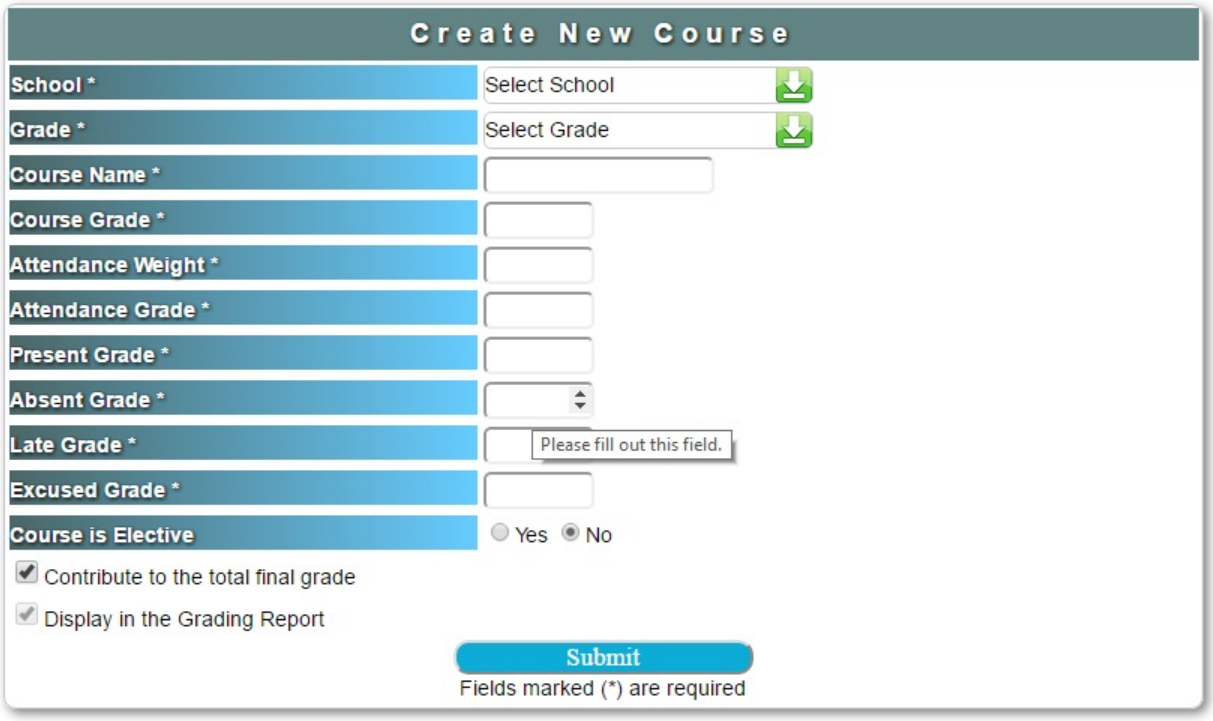
A course is a unit of teaching applied on a specific grade. Each grade has its own courses. Whenever a student is promoted to a certain grade, these courses are automatically coming on the list that the student has to study during the academic year unless the course is elective. For elective courses, the students will choose what courses to study. The system supports both types of courses and call the first one "Core" and call the second one "Elective".

New Course

To create new course, go to Courses > New Course:



The system will display the new course form as below:



You need to select the school and grade to which this course will belong. Each course will belong to only one grade and cannot be assigned to more than one grade even if it has the same name. For example, English course assigned to Grade One is completely different than English course assigned to Grade two. However, the course name has to be unique across the same grade.

Course Grade is an important field and has a great impact on the Grading System that produces the student's grading reports. We will explain the Grading System calculations thoroughly later in this guide.

Attendance Weight represents the impact of the attendance in the grading. For example, if the Attendance Weight is 0 then it has no impact at all to the course grading. But if it has a value, it will be compared to other Assignment Categories weights, for instance, Home Work, Class Work, Quizzes, quarter exams...etc. and based on the weight of each of these elements, the grading will be calculated. Again, we will elaborate more on this later on this guide in the Grading System calculations with detailed examples in different scenarios.

Attendance Grade for the course determines the percentage of the attendance session. The session represents a time part of the course as scheduled by the Scheduling system. Combined with the attendance status grade, the attendance percentage can be calculated. For instance, if

the Attendance Grade is 10 and the Present Grade is 10 then if the teacher marks the student as “Present” in a certain session for that course, then the attendance percentage will be 10 out of 10 or 100%. Similarly, if the Absent Grade is 5 and the teacher marked the student as ”Absent” then the attendance percentage for that session in that course will be 50% and so on.

Course is Elective radio button is “No” by default which means the course is core. If you select “Yes” instead then the course will be elective which has different handling that we will explain later on.

Contribute to the total final grade checkbox is selected by default which means this course will impact the total overall final grade of the student since it will accumulate with other courses to come up with the final grade. If you deselect this checkbox, it will obviously not impact the final grade.

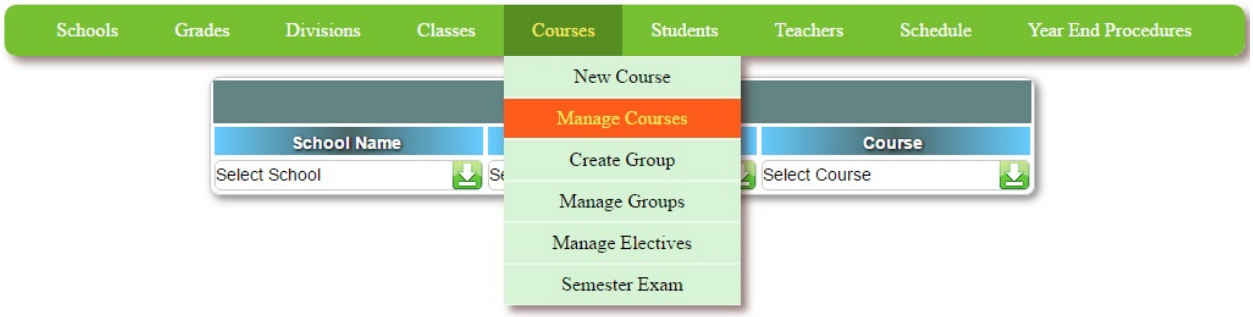
Display in the Grading Report checkbox is also selected by default which means that course will appear in the grading report whether or not it contributes to the final grade. You can deselect this checkbox only if the “Contribute to the total final grade” is deselected.

Now fill in all the required fields based on your detailed plan for each course and its contribution and it's elements weights that determine the overall final grade.

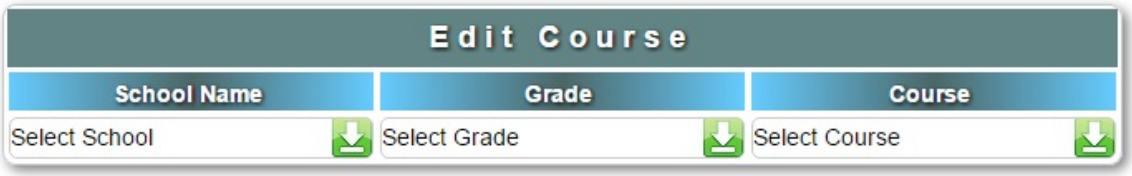
Once finished with this form click on Submit button to create the new course. System will respond with the confirmation message as below:

Manage Courses

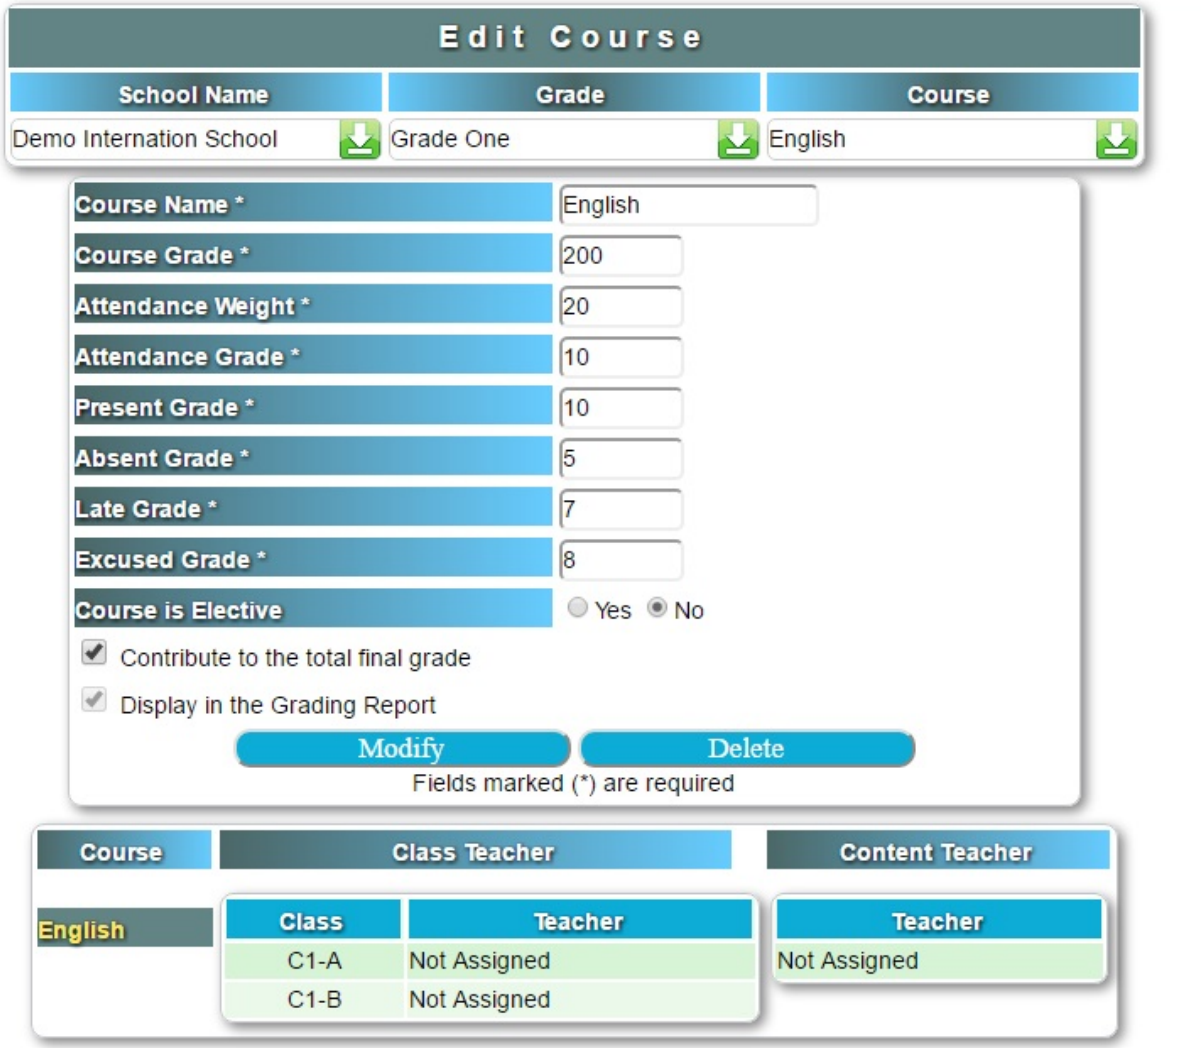
If you want to edit any previously created courses, please go to Courses > Manage Courses:



You will get three drop down lists:



Select School, Grade and then select the course you would like to edit. The system then will display the edit course form for you to update any information related to that course:



You can notice here the edit form and underneath there is a table that displays the course name and the class teachers that are assigned for that course per class. There is also another area in that table that shows the content teacher who is responsible for uploading content for that specific course.

This is just informative table that gives all the required information about the courses and the teachers assigned to them for each class and the teachers that are responsible for uploading content. This is to help the school administration to quickly recognize what needs to be done with respect to each course such as what classes are not assigned teachers for that course and if there is a teacher assigned to upload the content for that course or not.

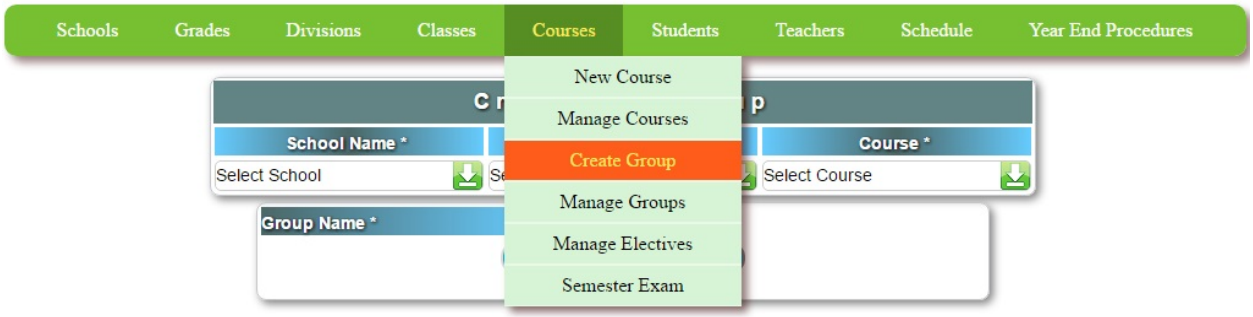
Now, you can update the form and click Modify button to save changes.

You can also delete a course when needed if you click on Delete button. Again, the system will respond with a sequence of confirmation messages to double confirm the action. You need to be careful with this action since it will destroy any records related to that course such as any content uploaded to that course, any assignments or any student grading for attendance, assignments or semester exams related to that course.

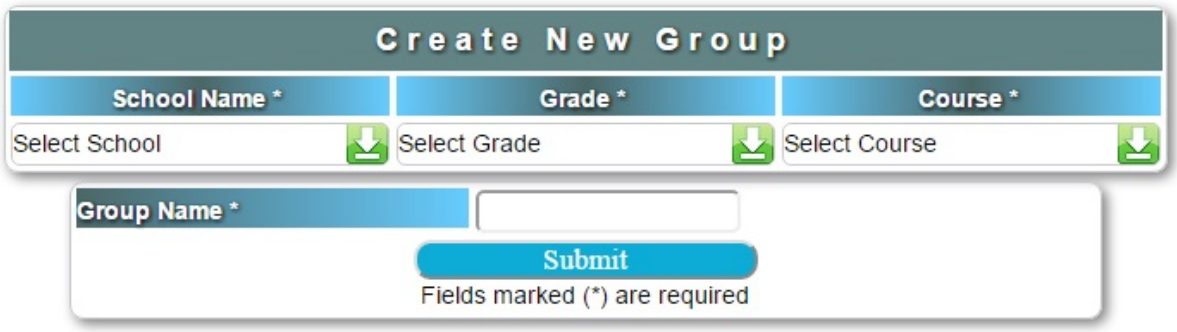
Course Groups

Course group is a classification for the students within the same course. You can create groups under a specific course and assign students to these groups. This flexibility is given by the system to ensure that if maximum capacity has been reached in a certain course, especially the elective course, the students can still be distributed into more than one group and in this case, you can assign different teacher for each group under the same course. For example, if 40 students opted for the same elective course and if the school rules are not to assign the teacher to more than 20 students in a course then you can create two groups under that course and assign 20 students in each group hence you can assign a teacher to each group.

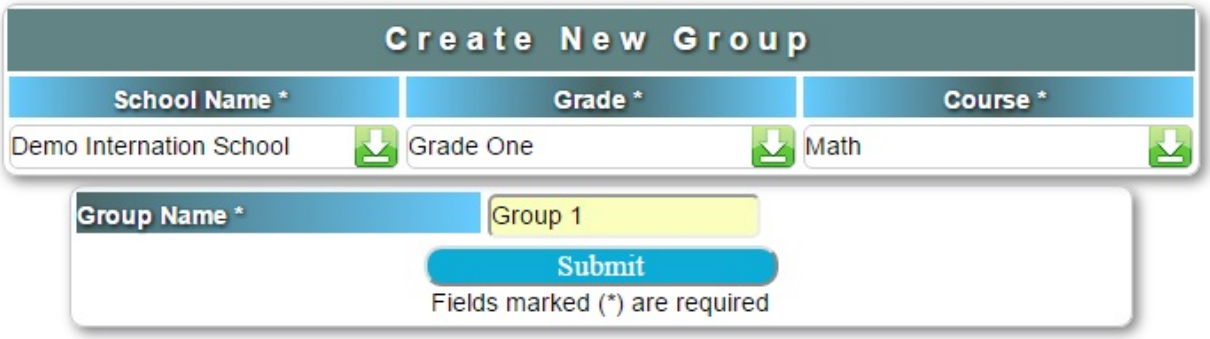
In order to create course group, go to Courses > Create Group



You will get three drop down lists along with a field to enter the group name as follows:



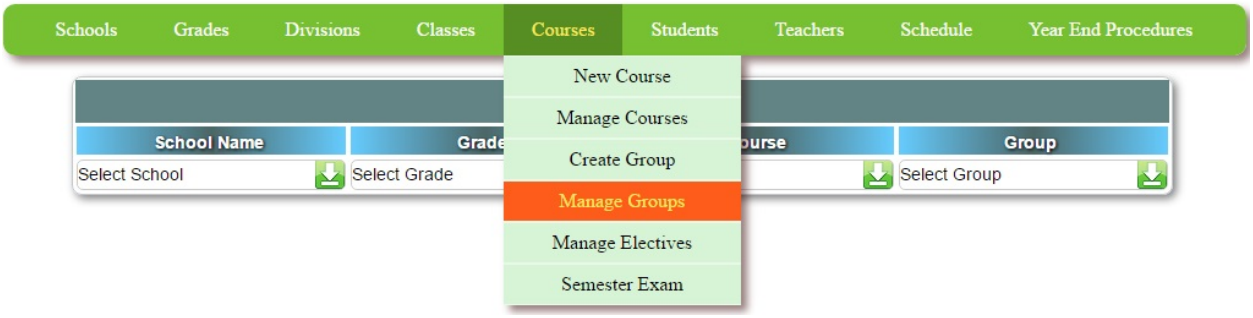
You will need to select the school, the grade and the course under which you are creating the group name. Enter the group name. Below is an example of creating the group under Math elective course:



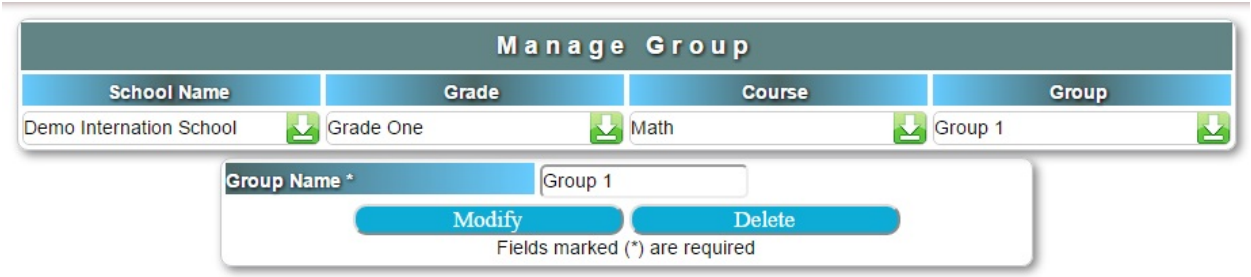
Once done with the form, click Submit button and the system will respond with the confirmation message as below:

Manage Groups

To edit the course group go to Courses > Manage Groups



You will get four drop down lists to select School, Grade, Course and then the Group you would like to edit as follows:



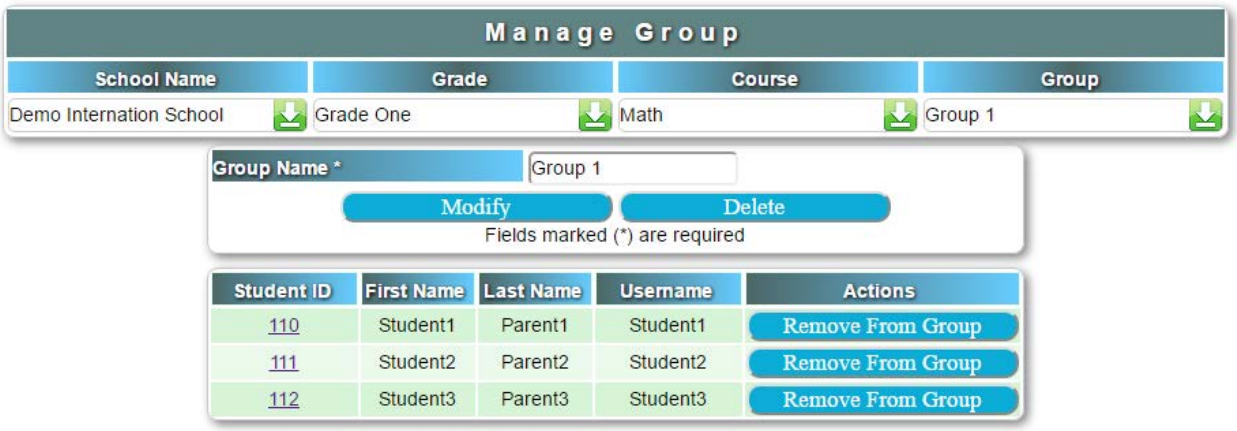
Edit the group name and click Modify to save the changes.

You can also delete a group. Click the Delete button and follow the system confirmation messages.

If you have assigned students to the group they would be displayed under the form in order to provide more information about the group and the list of students assigned to it and you will also be able to remove students from the group if required. Please go to the Students Groups section in this guide where we have already added students to the group in order to see what this screen will look like in this case.

Although at this moment we haven't added students to groups, we will assume that we have done this step already in order to show you how this screen looks like.

This is how it looks like after adding students to Math Group1 group:

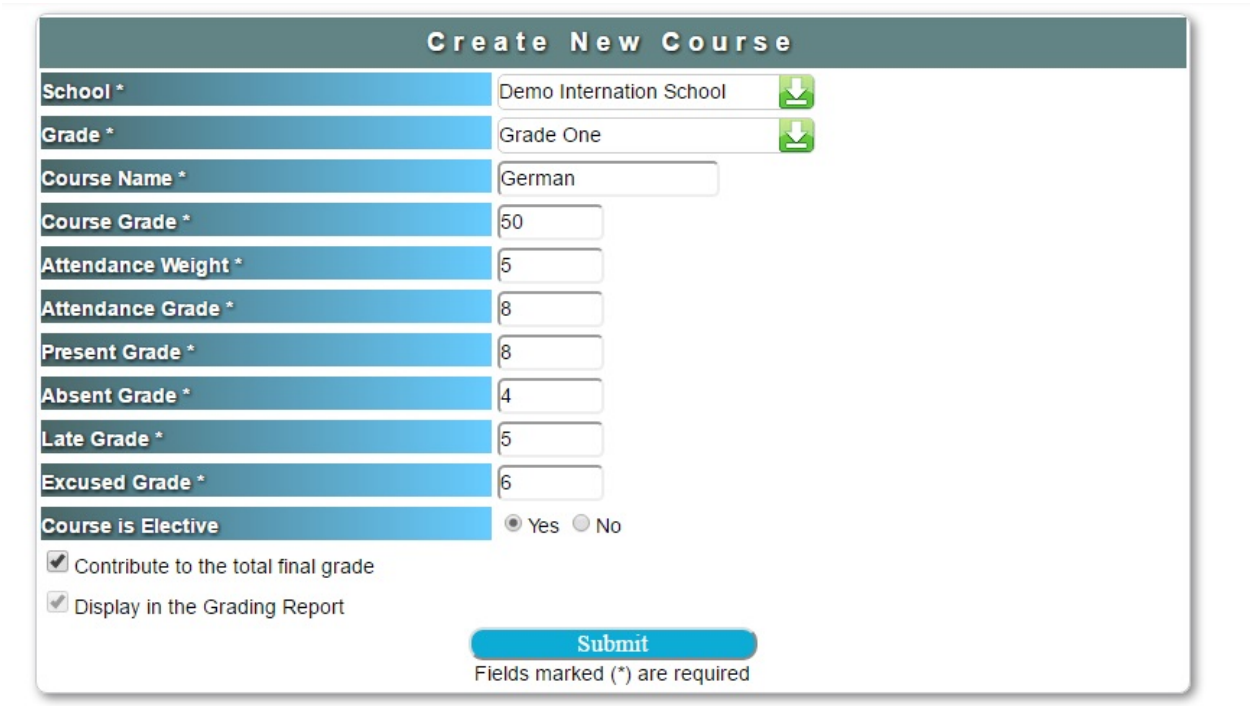


You can see the list of students who are added to the group. Next to each student you will find a button Remove From Group. If you click on that button you will remove the student from the group.

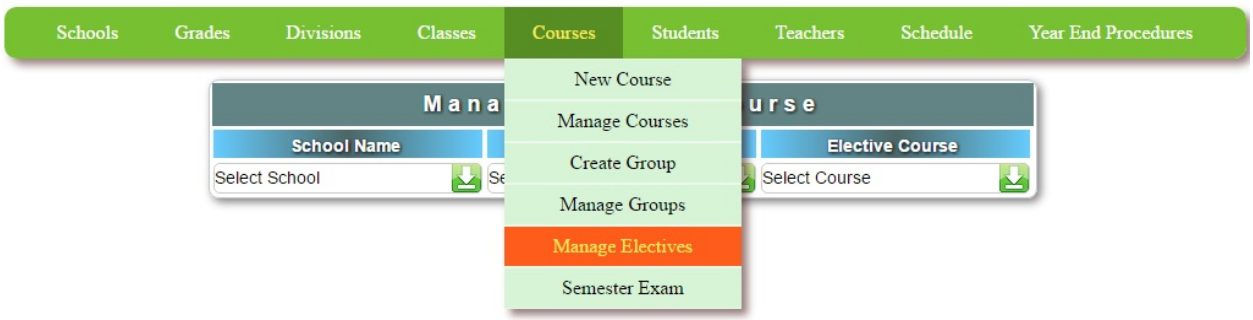
Manage Elective Courses

In order to manage elective courses first, you need to have elective courses.

We have discussed how to create an elective course by change the radio button "Course is Elective" from the default value "No" to "Yes". We have created the following elective course to elaborate on this as below:



Now if you need to manage the elective course, go to Courses > Manage Electives

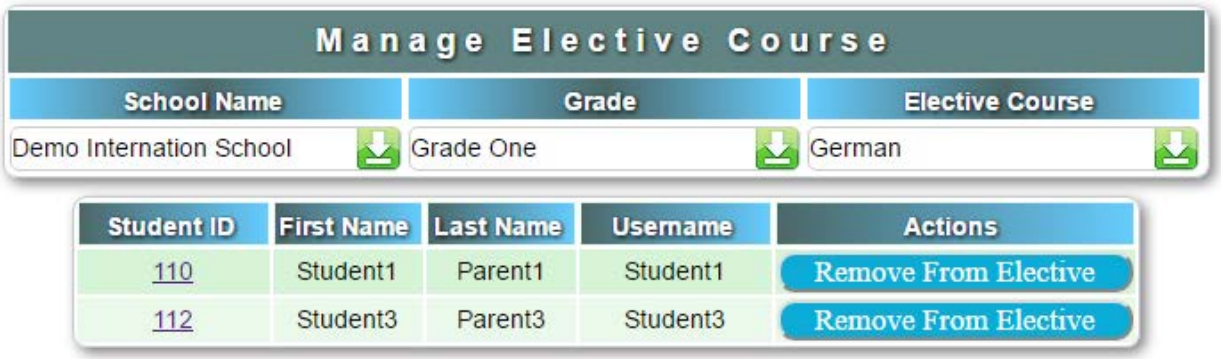


You will get three drop down lists:

Select School, Grade, and the Elective Course that you need to manage. If you have previously assigned students to that elective course, you will get a list of those students. Please go to the Students Electives section in this guide where we have already assigned students to that elective course in order to see what this screen will look like in this case.

Again, we will assume that we have already added some students to the elective course.

This is how it looks like after adding students to German Elective course:



You can see the list of students who are added to the elective. Next to each student you will find a button Remove From Elective. If you click on that button you will remove the student from the elective course.

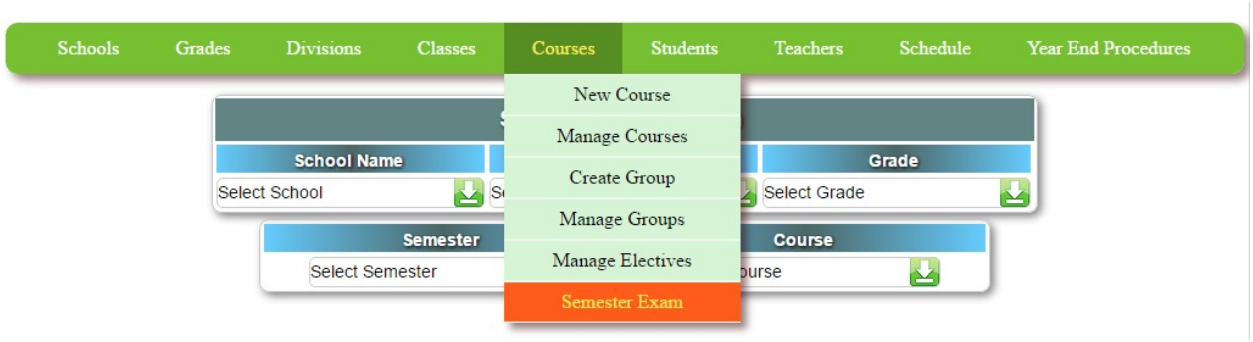
Semester Exam

The semester exam is an exam given in a specific course linked to one of the semesters that you have already created as mentioned earlier in Year Semesters and Grade Semesters.

Since this is an important exam, the system handles it separately. It stands alone in terms of its grading nature. It has its own weight which determines the contribution to the final course grade. It's not handled like other assignments elements such as Home Work or Quizzes or even quarter exams where all these elements have to come under what we call Assignment Category. You can consider it a category by itself. It is also being graded separately and displayed in the grading report with its own column.

In order to create a semester exam, you need to choose the course to which this exam will be linked.

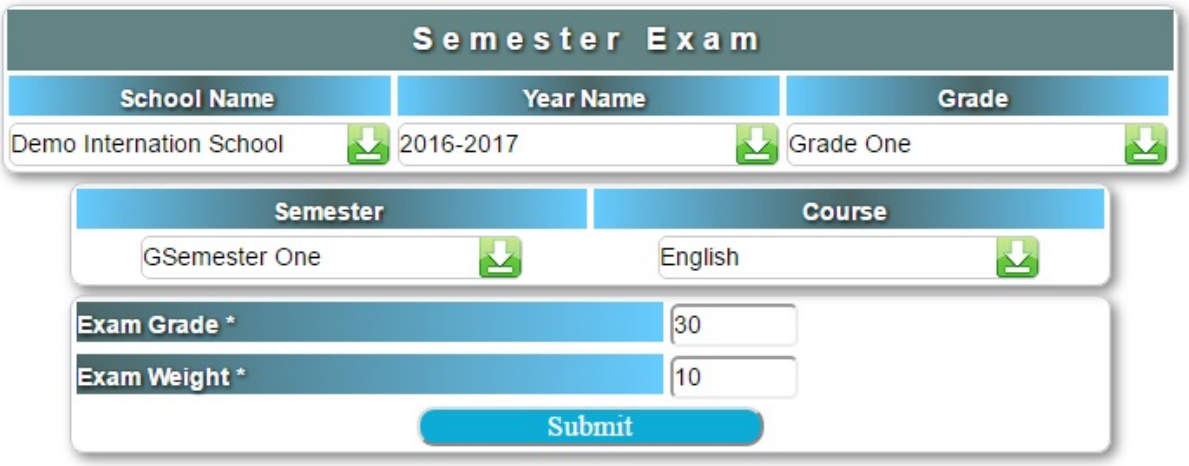
Go to Courses > Semester Exam as follows:



Now you will get five drop down lists to access the semester and link it to the course:

You need to select the school, the school year, the grade, the semester and the course for which you need to create the semester exam.

Please note that the semester drop down list will display the Year Semesters if the grade has no special terms and semesters. Otherwise, the Grade Semesters will be displayed instead.



As shown above, the semester exam has two fields; Exam Grade and Exam Weight.

Exam Grade will determine the student exam grading percentage. For instance, if the teacher graded the student with a mark of 27 and the Exam Grade was 30 then the student grading percentage is 27 over 30 or 90%.

Exam Weight will determine the contribution to the final grading. If it has 0 then there is no contribution while if it has a value it will be compared to other Assignment Categories weights, for instance, Home Work, Class Work, Quizzes, quarter exams...etc. and based on the weight of each of these elements, the grading will be calculated. Further elaboration will come over when we explain the Grading System.

In case you need to edit or delete the previously created Semester Exam, please follow the same steps above.

Student Management

Student Management System will provide you with what you need to create new students or to edit the information related to any created student.

You will also be able to search students by school name, grade name, class name, first name, last name, username or student number (Student ID).

The system will also provide you with some other capabilities to manage students groups or students opted in elective courses.

You will also have important reports regarding the student grading so you can Student Grading Reports in a certain class per each course or you can get a comprehensive report for each student for all courses and final grade per term, per semester, or overall final grade. You can also have exhaustive reports for the detailed grading with breakdown for the assignment categories, attendance and semester exams.

New Student

You start with creating student profile through Students > New Student:

You need to fill in the required fields as mentioned in the form. You need to select the student school, grade, and class. You need to enter the first name and last name and select the country of nationality. You also need to enter the city and full address of the student. Also, enter the date of birth.

You can also upload the student photo. The photo is important so that the admin and the teacher can quickly recognize the student. However, uploading photos are optional.

Finally, choose the username and password that you will send to the student in order for her / him to be able to login to the Student Portal.

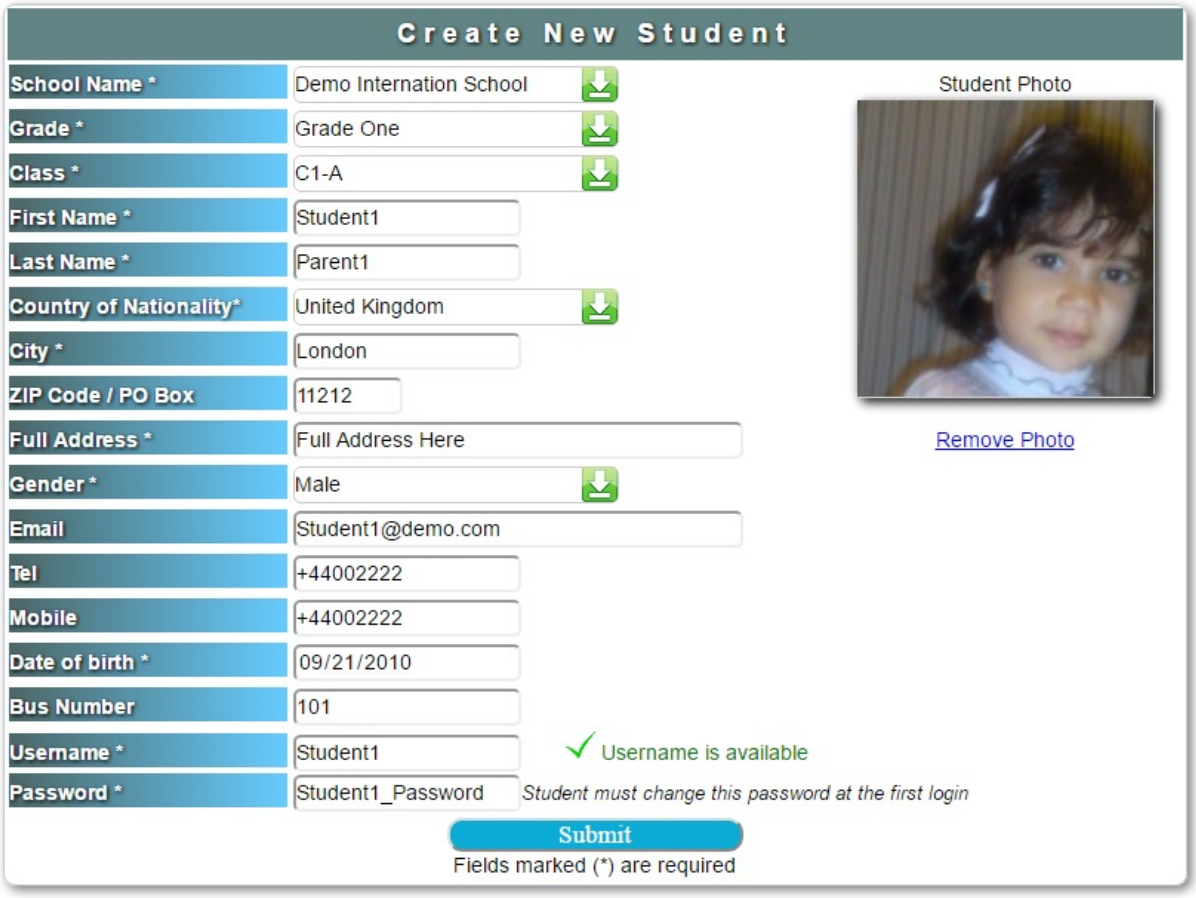
Login Information Rules:

Username is not case sensitive and has to be unique and at least 8 characters

Password is case sensitive and has to be at least 8 characters

The student must change the password at the first login. Therefore, the password you choose here is just an initial one and the students will have the chance, in fact, they will be forced, to change the password to their own at their first login. This is to ensure more secure login information.

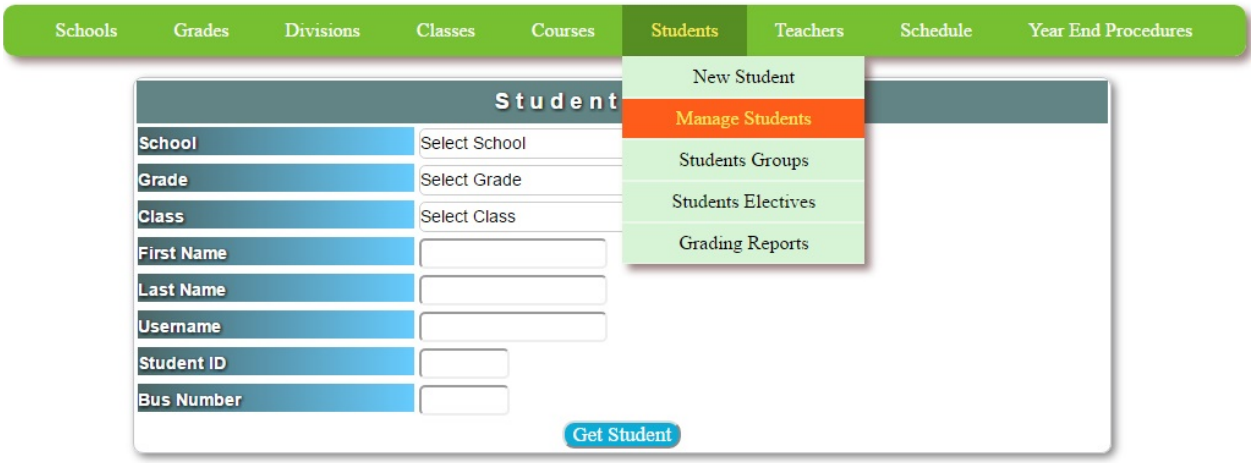
Once filled in all the required details, please click on Submit button to create the new student.



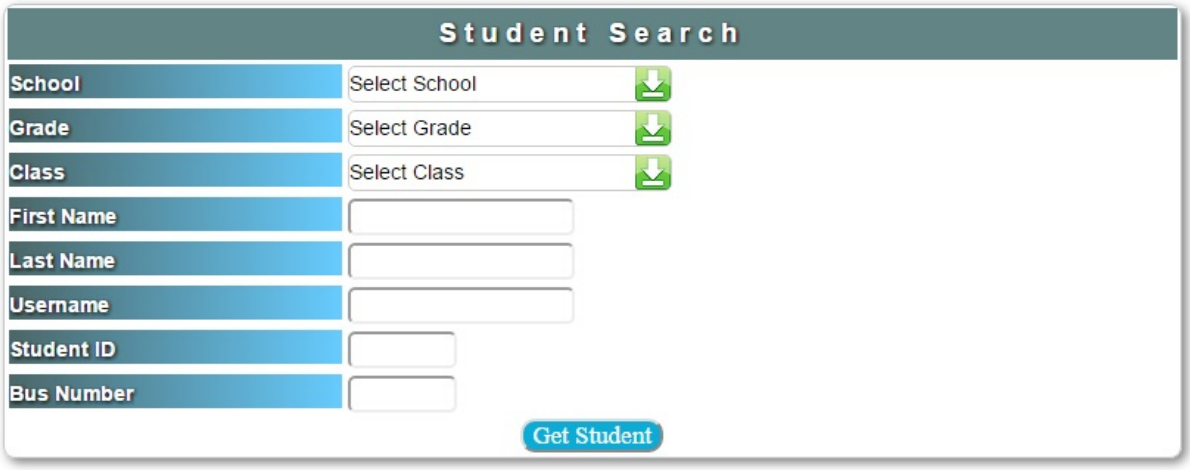
When you submit the form to create the student, the system will respond with the confirmation message below:

Manage Students

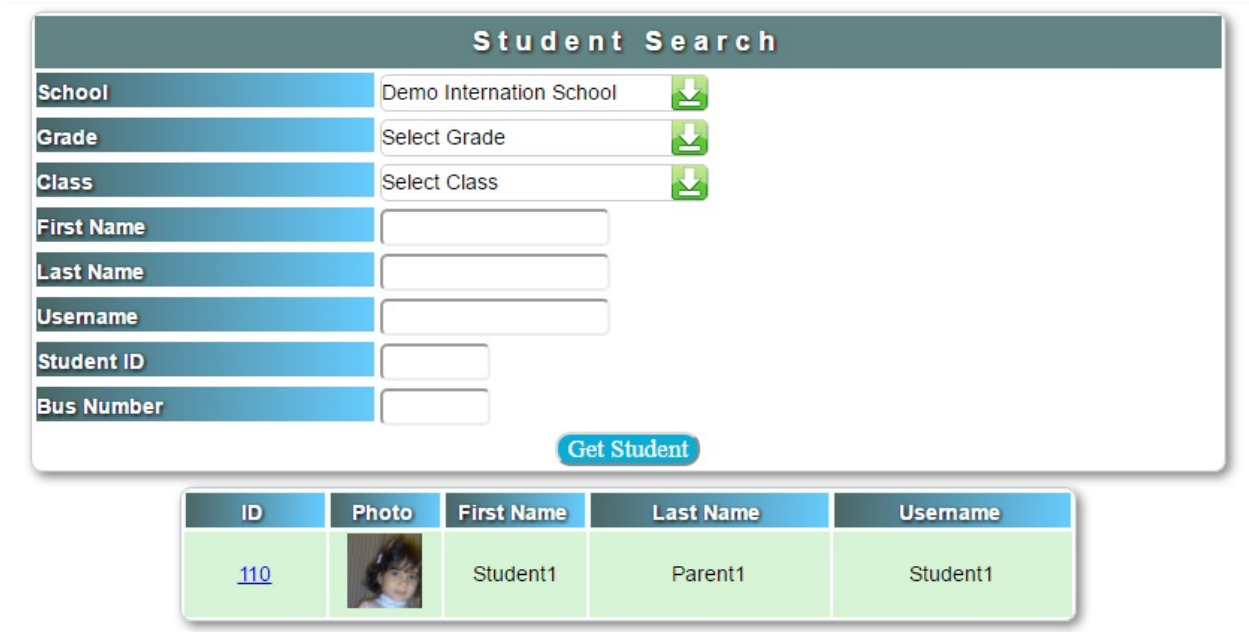
To edit any previously created student you can go to Students > Manage Students:



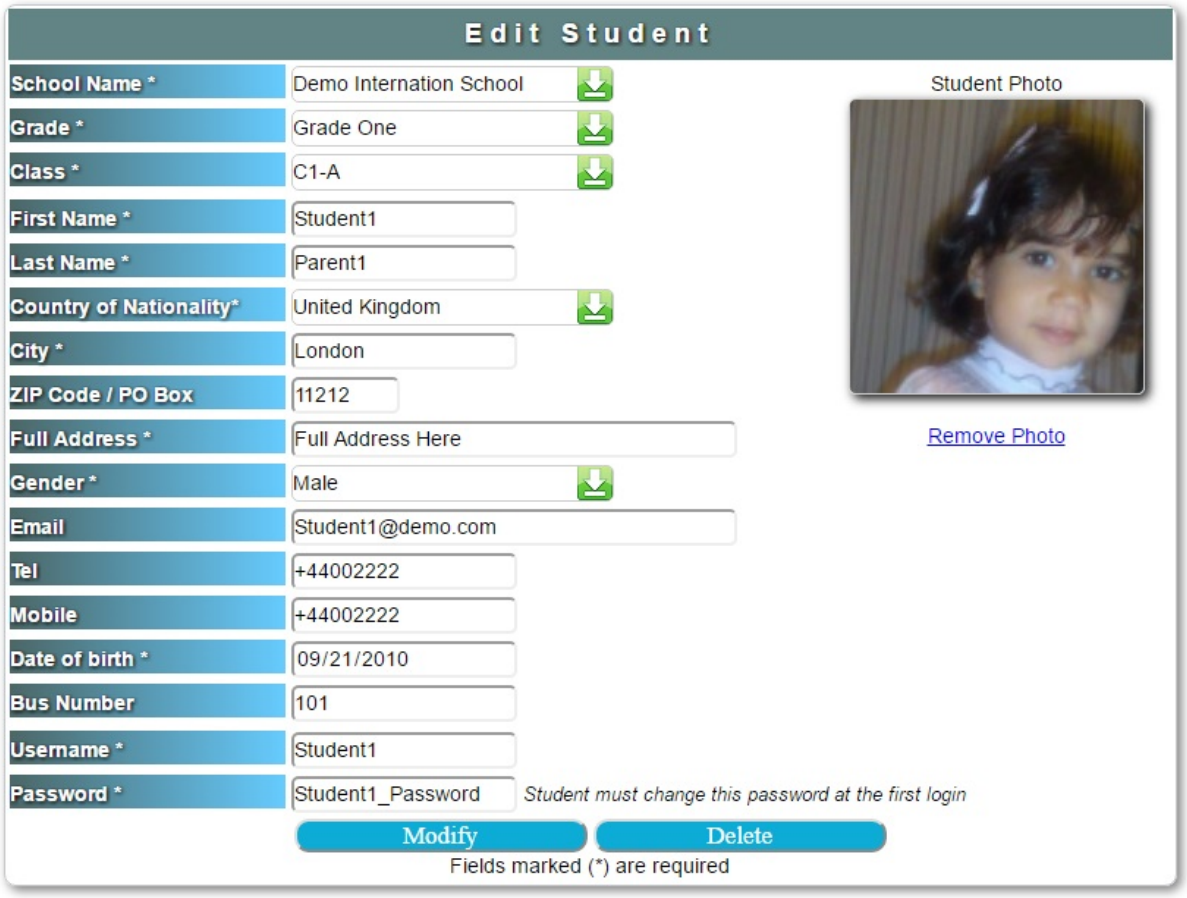
You will get Search Student screen as follows:



In Search Student form, you can search student by School, Grade, Class, First Name, Last Name, Username, ID, and / or Bus Number. You can use one field or a combination of fields to find and access the students from the produced student list as shown below:

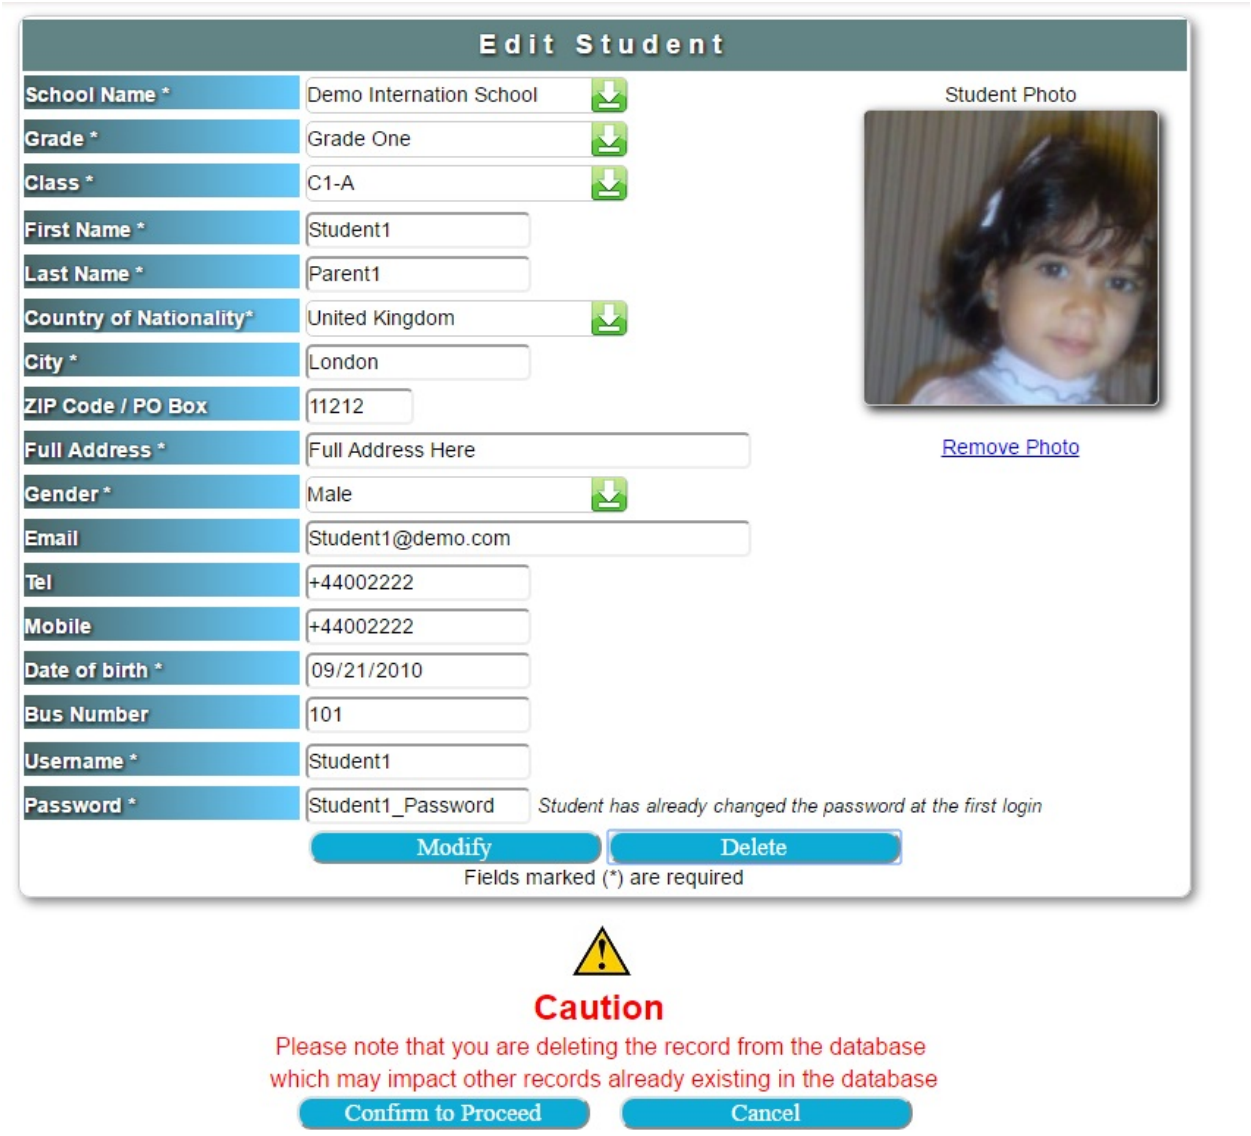


If you click on the Student ID or on the student photo you will get the edit student form so that you can update student data as needed. The edit form is shown below:

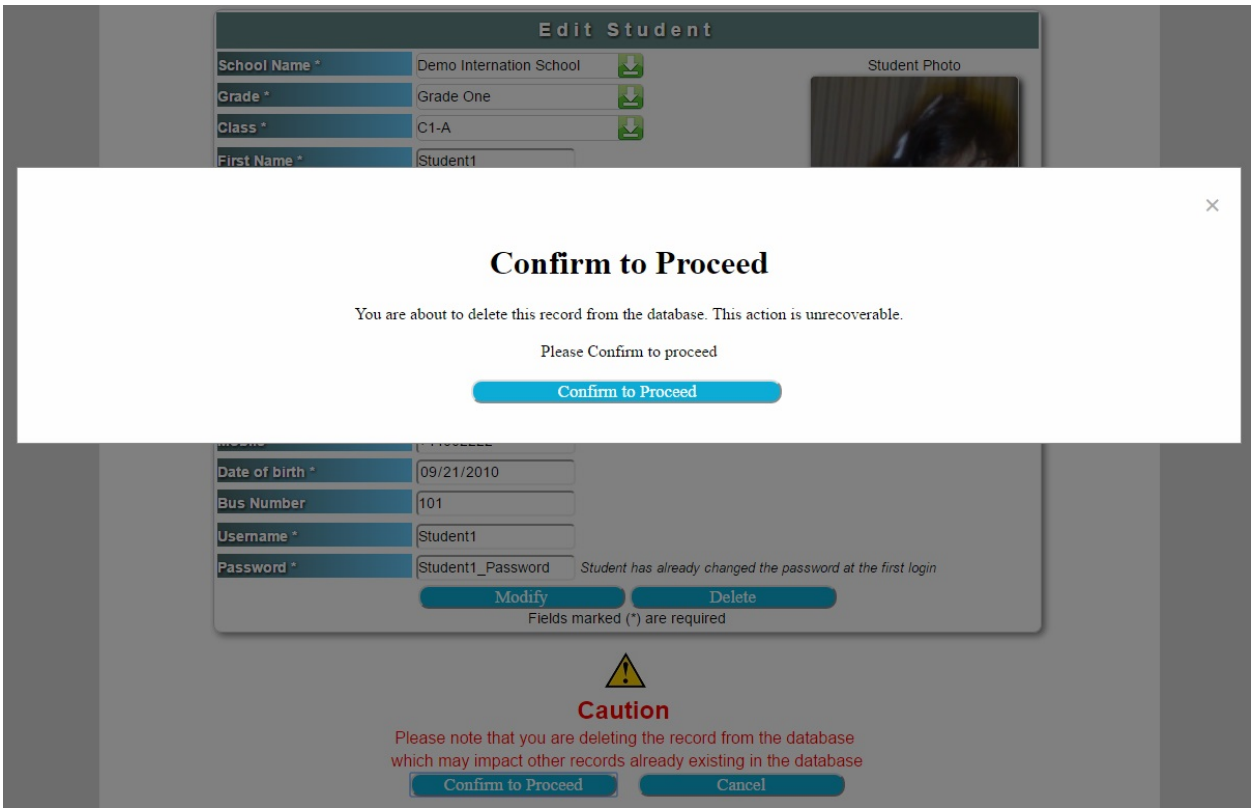


You can now update the form and once finished click Modify button to save the changes.

You can also delete the student profile. Click on Delete button if you would like to delete the student record from the database. The system will respond with the following caution message:



If you click on “Confirm to Proceed button”, another confirmation dialog will be displayed



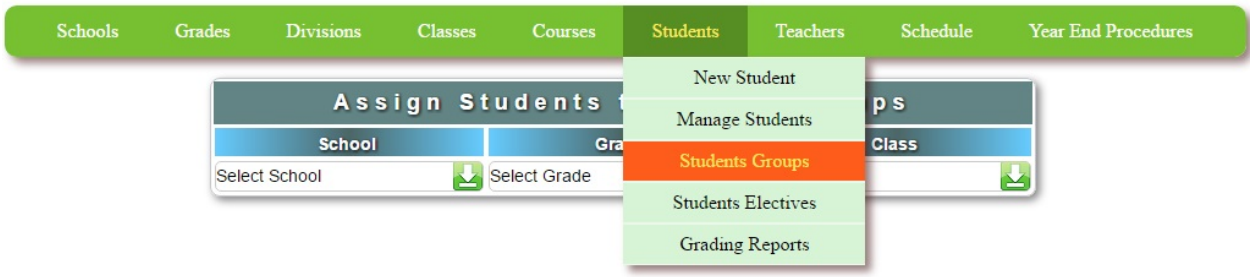
Once you click on the “Confirm to Proceed” button on the dialog box, the system will permanently delete the student records and all its related records from the database. Please be careful when taking this action which is unrecoverable. When you delete the student record, you will not be able to retrieve any records related to this student such as profile or grading report.

Students Groups

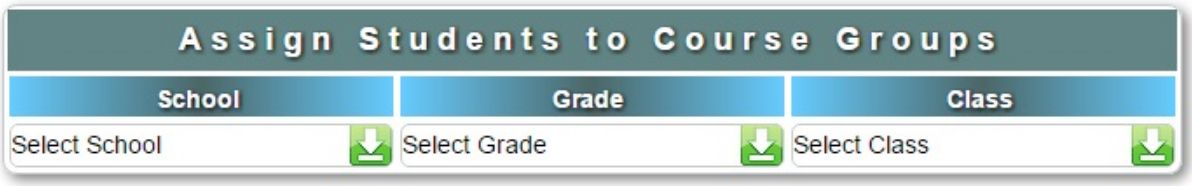
We have explained earlier in the Course Groups section how to create groups under the course.

Now we need to explain how to add students into the group that we have created under the course.

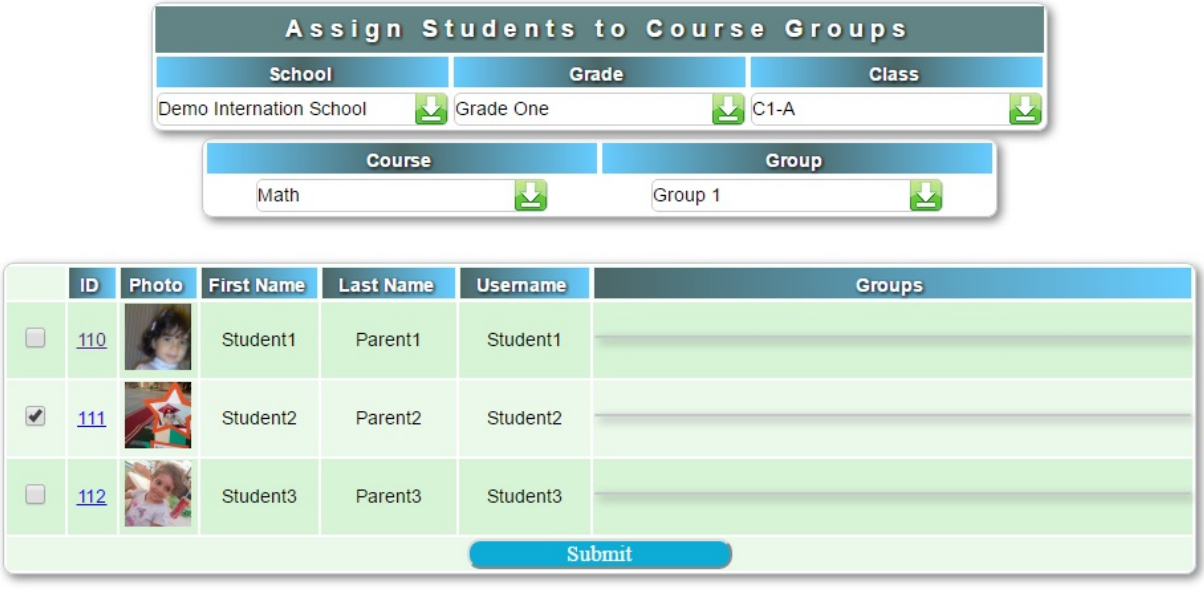
In order to add students into groups, go to Students > Students Groups:



You will get three drop down list as below:

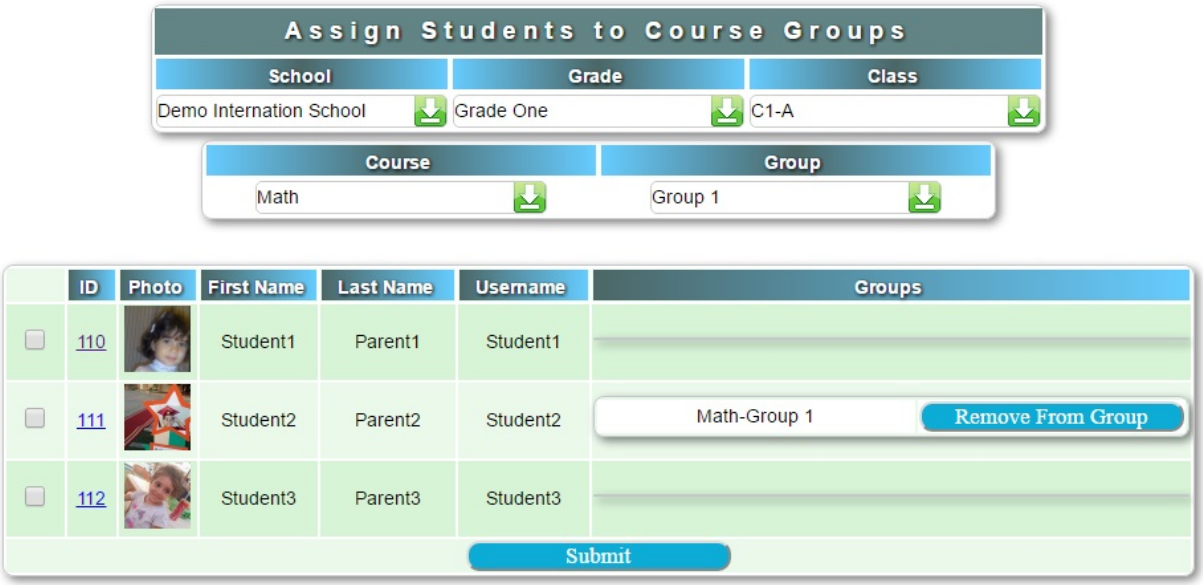


You will need to select school, grade, and class. The system automatically will retrieve the courses related to the selected grade and the students related to the selected class as follows:



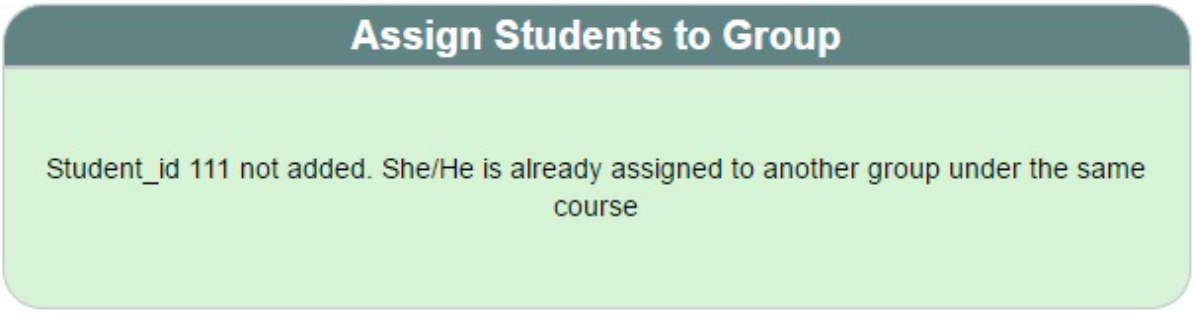
You will notice that the course drop down list contains only the courses that have groups. In our scenario it's only the Math course that has groups therefore only Math will be on that list. Once you select the Math course, the Group drop down list will be populated with the groups related to this course. Select the group from the Group drop down list and then select the students you would like to add to this group. Once you click Submit button, the selected students will be added to the selected group and the system will respond with the following confirmation message:

If the student already added to the group, the following screen will be displayed instead:



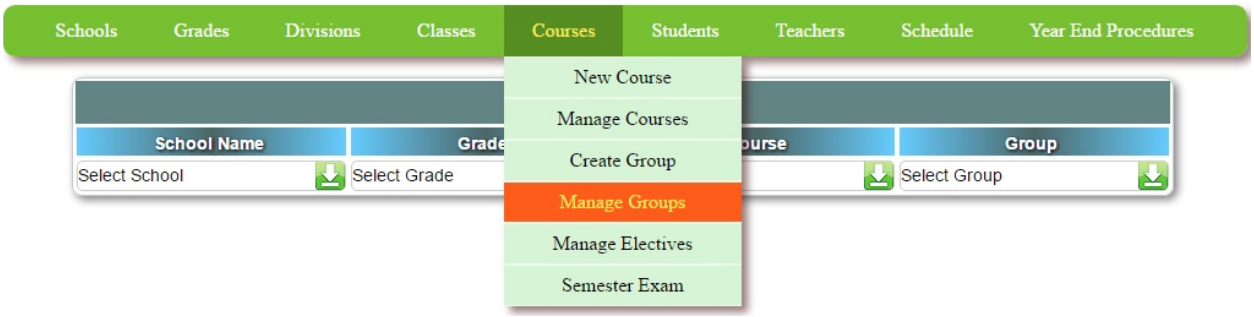
As you can notice, Student2 which we have added to the Group 1 is now having the Math-Group 1 next under the Group column. You will then have the option to remove him from the group if you click on "Remove From Group" button. It's also important to mention here that this student cannot be added again to this group or any other groups under the same course

and the system will respond with the following message if you try to do so



For instance, if the Math course has another group let say Group 2, then Student2 cannot be added to Group2 either. You have to remove him from Group 1 first in order to be able to add him to Group 2. In other words, the same student can only be added to only one group under the same course.

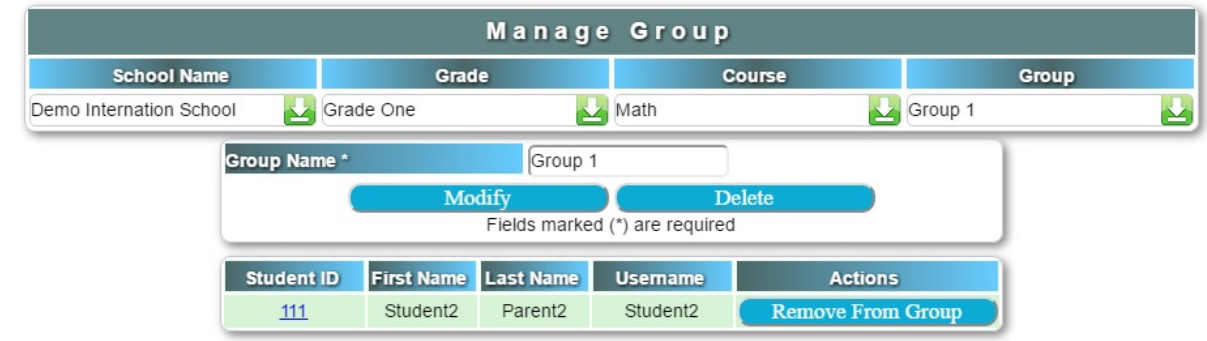
Now you can go to Courses > Manage Groups in order to check the group after we have added students to it:



As mentioned in the Courses section, you will get four drop down lists to select School, Grade, Course and then the Group you would like to manage as follows:

Select school, grade, and course and then select the group you would like to manage.

You will get the following screen if you selected Group 1 under Math course:



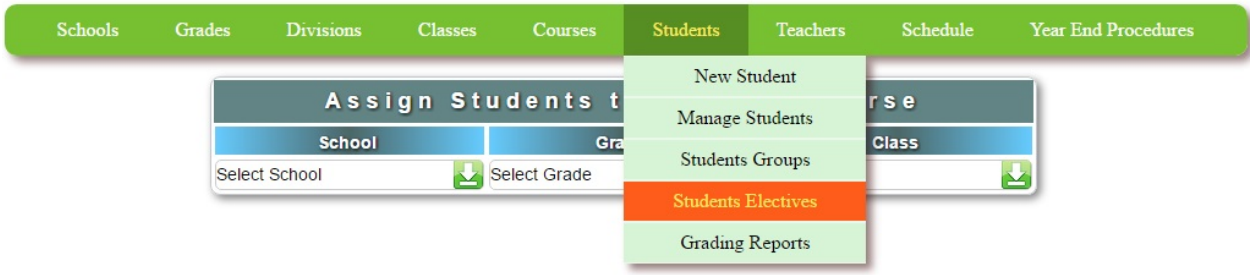
As you can see, now the group is displayed with a list of added students. You can choose to remove a student from the list if you click on "Remove From Group" button.

Students Electives

We have explained earlier in the Course section how to create Elective Courses.

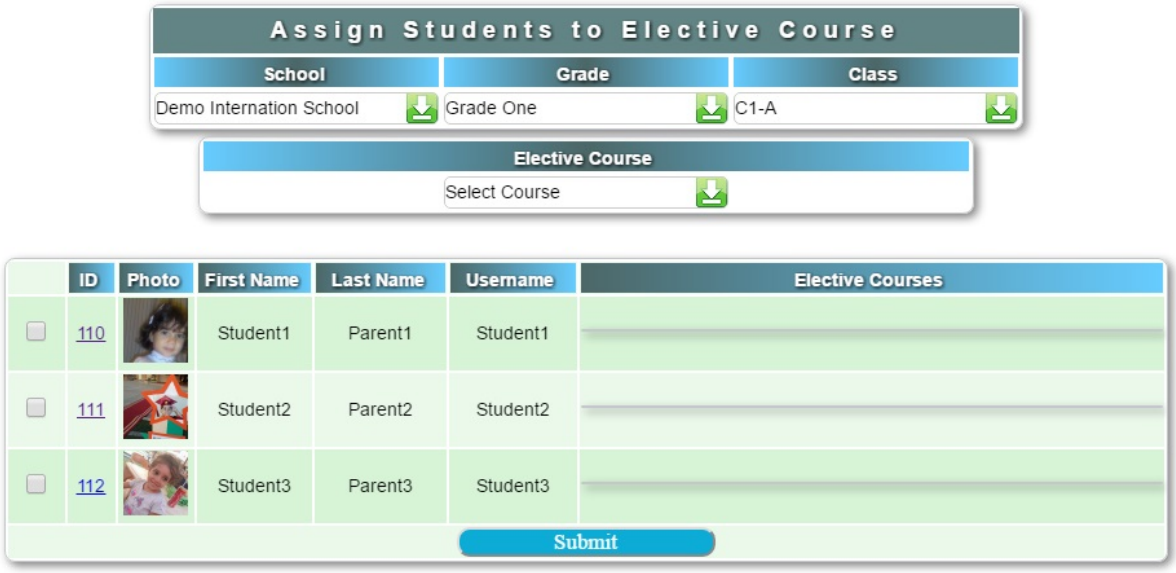
Now we need to explain how to assign students to the elective course.

In order to assign students to elective course, go to Students > Students Electives:



You will get the following drop down lists:

Please select school, grade, and class and you will get the following form:

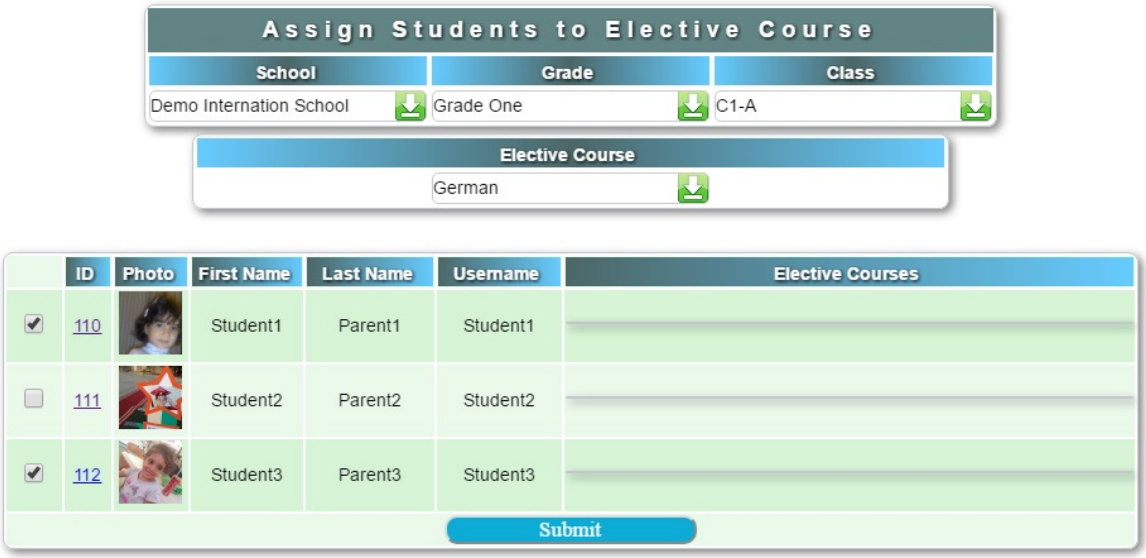


Now notice the Elective Course drop down list. You will only get the elective courses related to the selected grade in that lists. Other core courses will not be included.

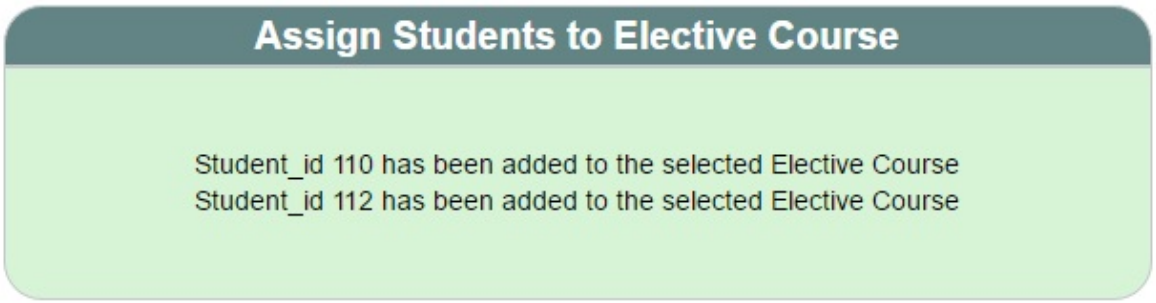
Select the elective course from the Elective Course to drop down the list.

You can also notice that the students related to the selected class have also been listed in that form with a checkbox next to each student allowing you to select students to be assigned to the select elective course.

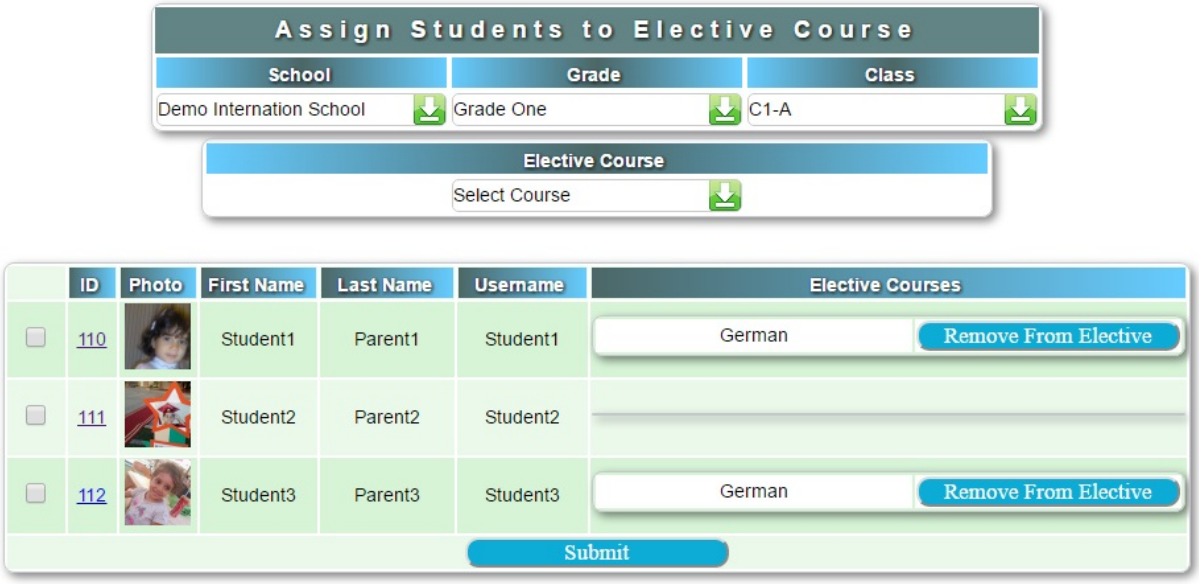
Now select the elective course and select the students to be assigned to that course as follows:



And then click Submit button to complete this action. The system will respond with the following confirmation message:

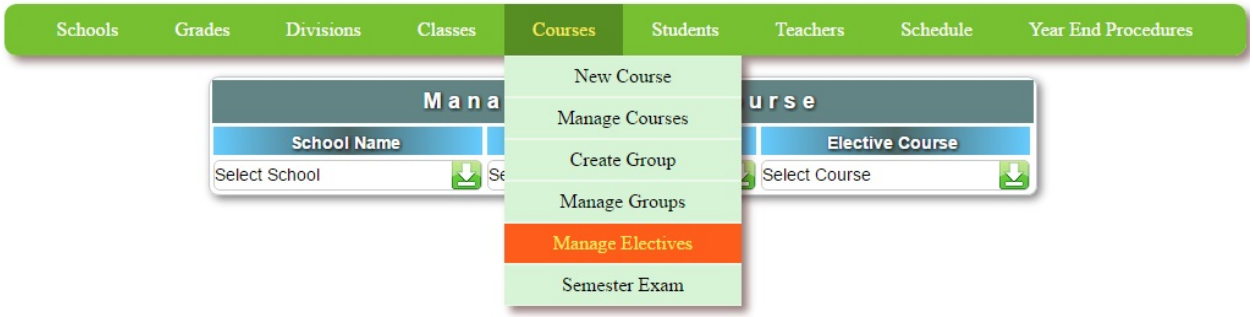


Now follow the same steps to get into the previous form again. This time, you will get the form as below:



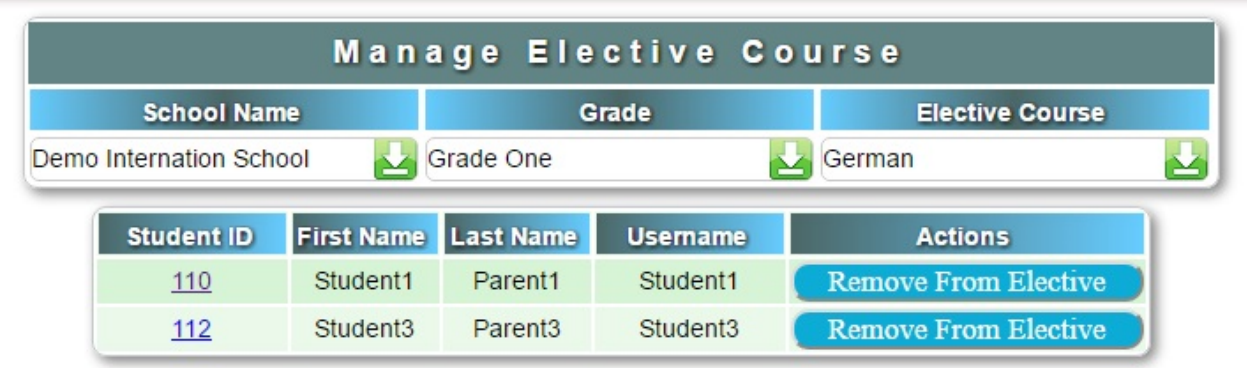
You can notice that the assigned students are now having the elective course added to "Elective Courses" column along with "Remove from Elective" button. If you click on that button you will be able to remove the student from the Elective Course. You can also assign the students to another elective course when you select another course from "Elective Course" drop down the list and then select the students you would like to assign to that elective course.

Now you can go to Courses > Manage Electives in order to check the Elective Course after we have assigned students to it:



As mentioned in the Courses section, you will get three drop down lists to select School, Grade and then the Elective Course you would like to manage as follows:

Select school, grade and then select the elective course you would like to manage. You will get the following screen if you selected German course under Grade One:



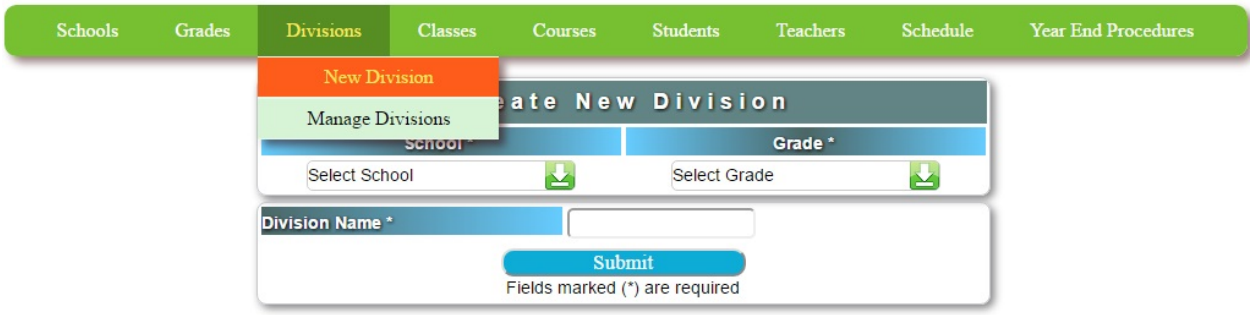
As you can see, now the elective course is displayed with a list of assigned students. You can choose to remove a student from the list if you click on “Remove from Elective” button.

Division Management

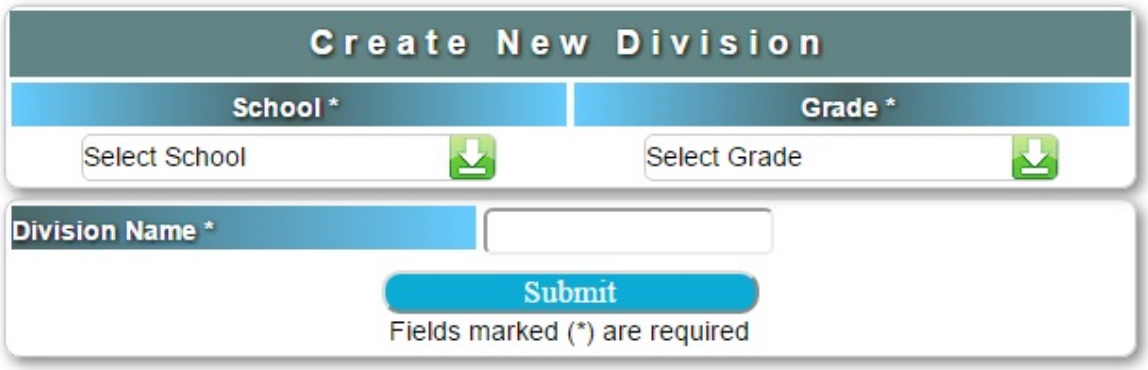
In some cases, the school administration might want to divide the grade into division. In some education systems, you might have a division for science and another one for literature. The division management system will give you the ability to create division and assign courses and classes to that division. Students in that grade and in that class will be automatically added to the division once you assign their classes to that division.

New Division

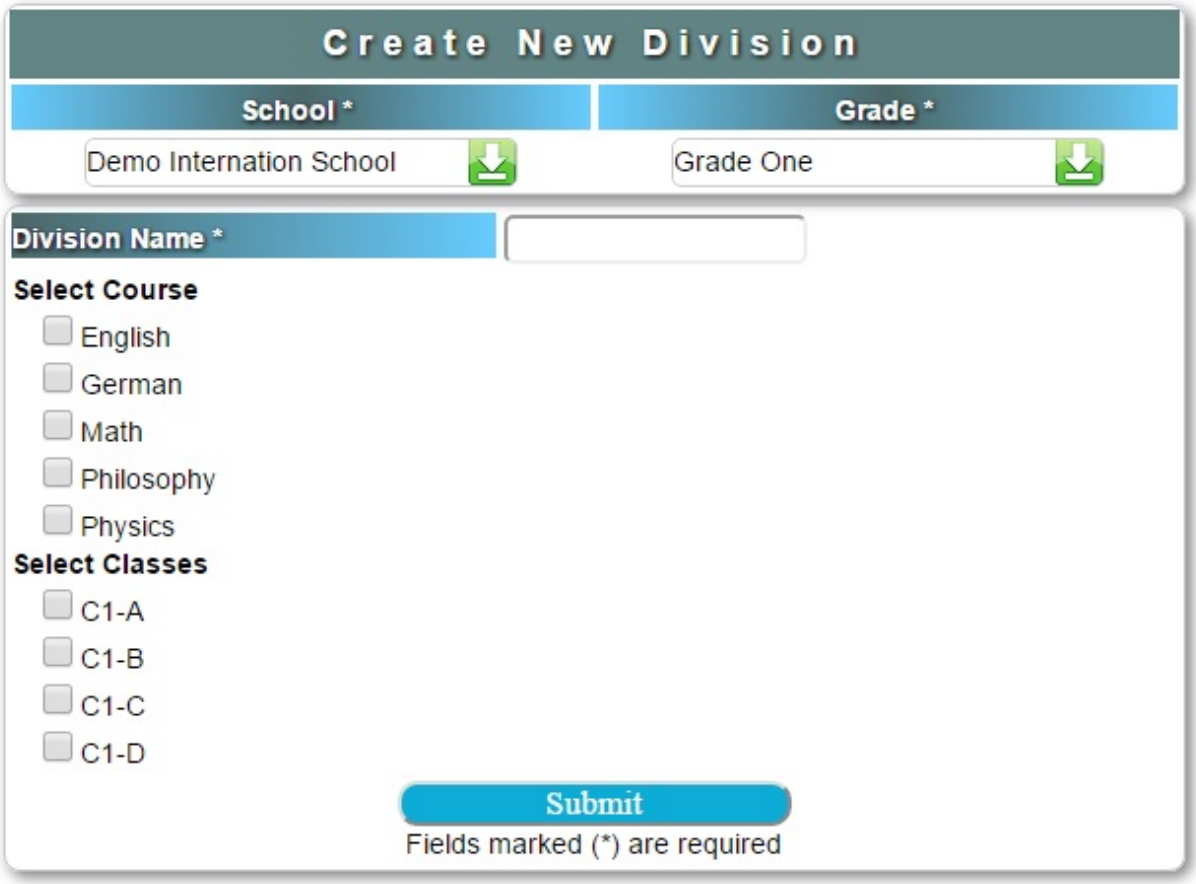
To create new division, go to Divisions > New Division:



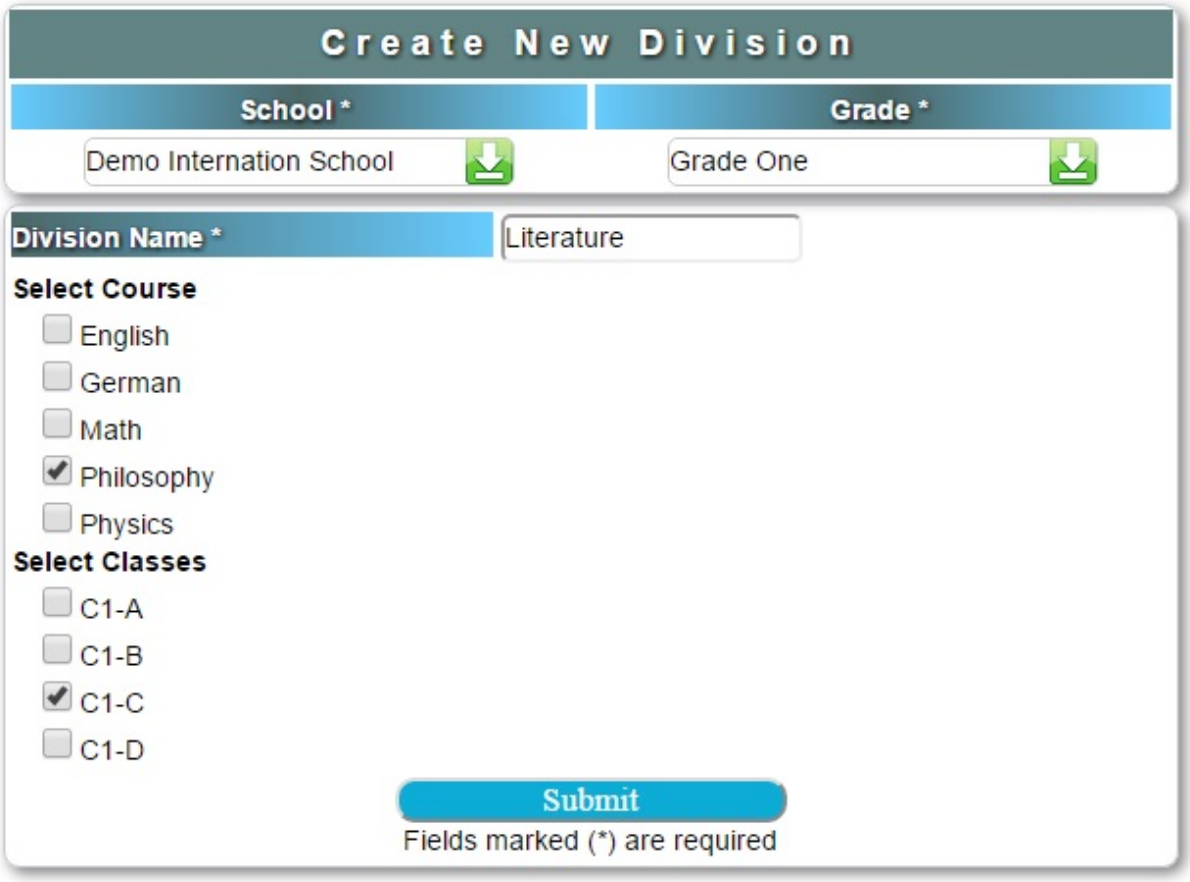
You will get drop down lists to select the school and the grade under which you need to create the division



Select the School and the Grade. Once you select the Grade, a list of courses and another list of classes will be displayed with a checkbox next to each course and class allowing you to select the courses and the classes which will be linked to that division:



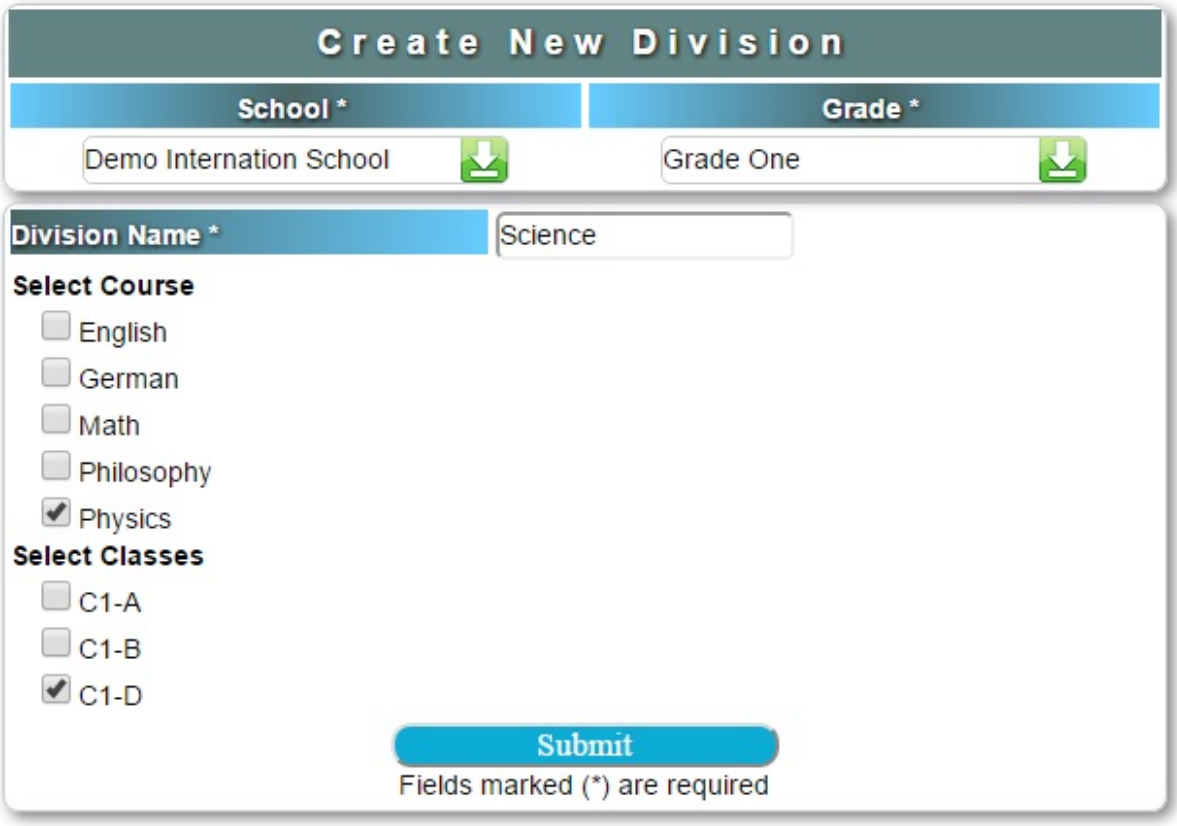
Enter the division name and select the courses and the classes that belong to this division as follows:



Then click submit to add the selected courses and classes to this division. The system will respond with the following confirmation message:

Important Rules:

The same class cannot be added to more than one division. For example, if you are trying to create another division under the same grade, you will notice that class C1-C which was added to the Literature division in the previous step will not appear in the "Create New Division" again. Please see the below screen:



As you can notice, class C1-C is not showing anymore because it already belongs to another division under the same grade.

The Same course can be shared and added to more than one division. You can also notice from the previous screen that although Philosophy was added to Literature division, it is still showing in another new division which means it can be added to another division.

Students who belong to a class that is added to a certain division will be added automatically to this division. If you don't want a certain student to belong to this division, you then need to change his/her class to another one which does not belong to that division.

Manage division

Teacher Management

Teacher Management System will provide you with what you need to create new teachers profiles or to edit the information related to any created teacher profiles.

You will also be provided with all tools that will help you create the teacher authority matrix.

The system differentiates between two types of authority matrices; Class Authority and Content Authority.

By teacher **Class Authority** we mean the list of grades, classes, and courses that the teacher has the authority to take specific actions. Class Authority matrix is created by assigning the teacher to a grade, a class, a course and/or a group in order to take actions such as taking attendance, creating assignments, giving assignments, grading assignments and grading exam semesters for the students who belong to that course, group, and class. In other words, it is the authority given to the teachers to manage their students' day to day operations under the assigned courses, groups, and classes.

By teacher **Content Authority** we mean the list of courses for which the teacher is authorized to create and upload content such as e-Books, Units, Lessons, Assignment Categories, and Standard Assignments. Content Authority matrix is created by assigning the teacher to a grade and a course under this grade.

You will also be provided with the reports to view all the details regarding the teachers' authorities per course on the grade level.

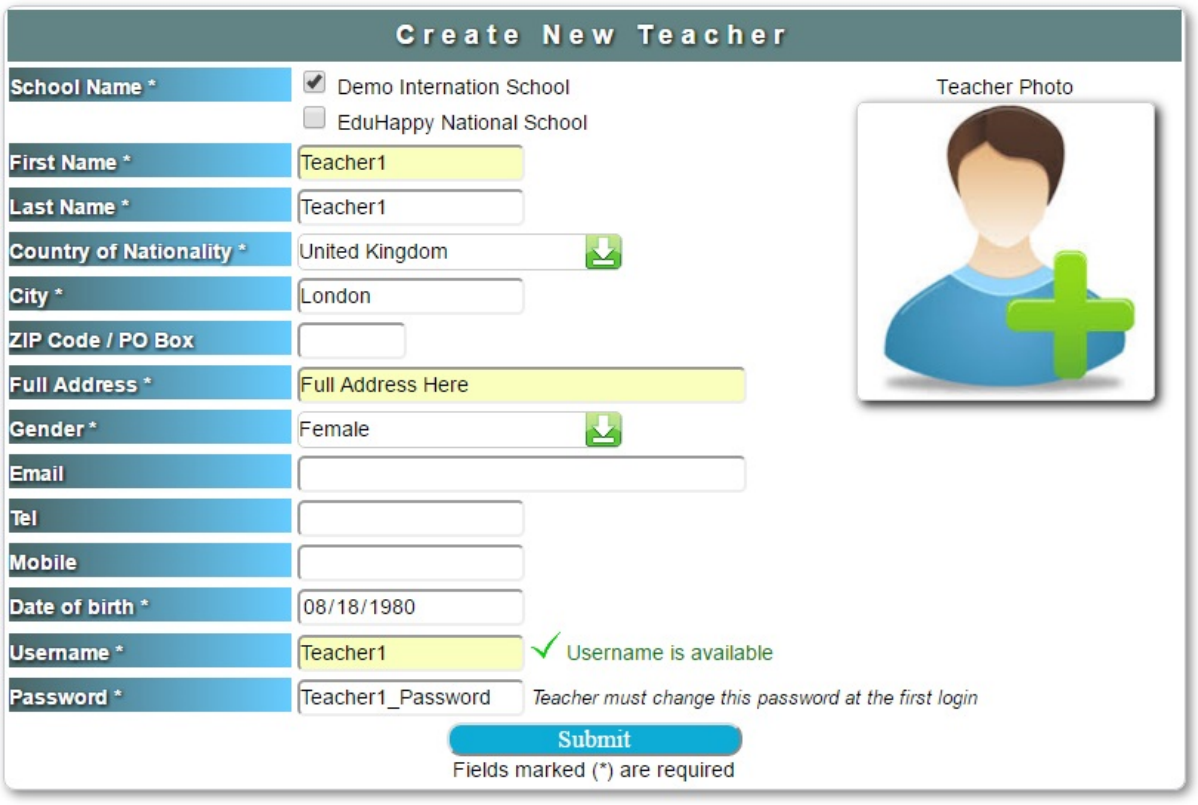
New Teacher

To create new teacher profile, go to Teachers > New Teacher:

You need to fill in all the required fields. Please note that school name field contains all the schools you have created under your account. You can select more than one school to be assigned to the teacher. That means the teacher can belong to many schools at the same time which is true and simulates the reality. You cannot leave this field unselected. In order to create new teacher, you have to assign her/him to at least one school or otherwise you will not be able to proceed further.

You can also upload a photo for each teacher. Just click on the square photo on the upper right of the profile and you will be able to select the photo from your file system in your PC or on your mobile phone if it's connected to the PC. Choose the photo and the system will upload it and attach it to the teacher profile.

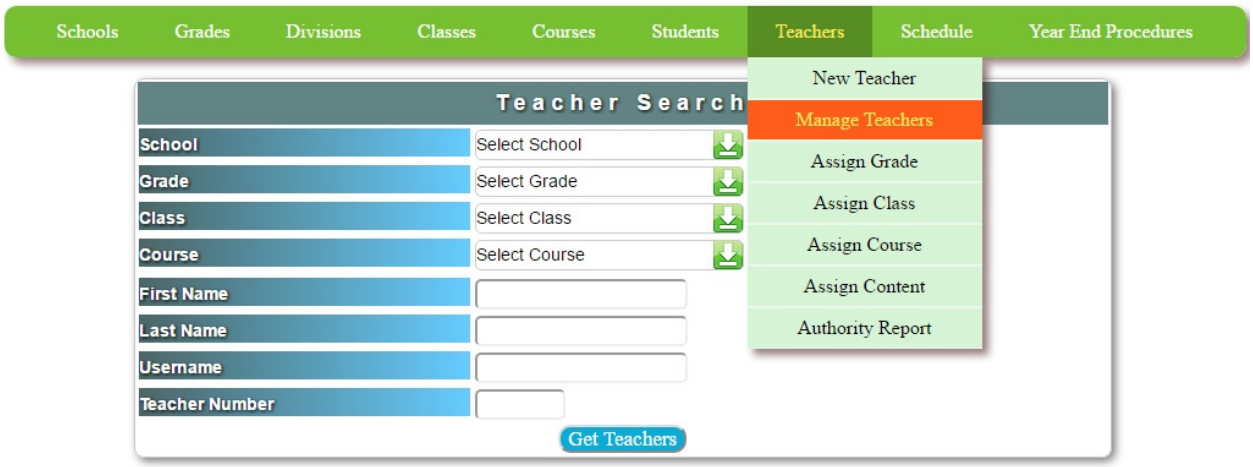
Complete the form and choose the username and password. Username is not case sensitive and has to be unique and not less than 8 characters. The password is case sensitive and cannot be less than 8 characters too and must be changed at the teacher's first login in order to ensure more secure login information.



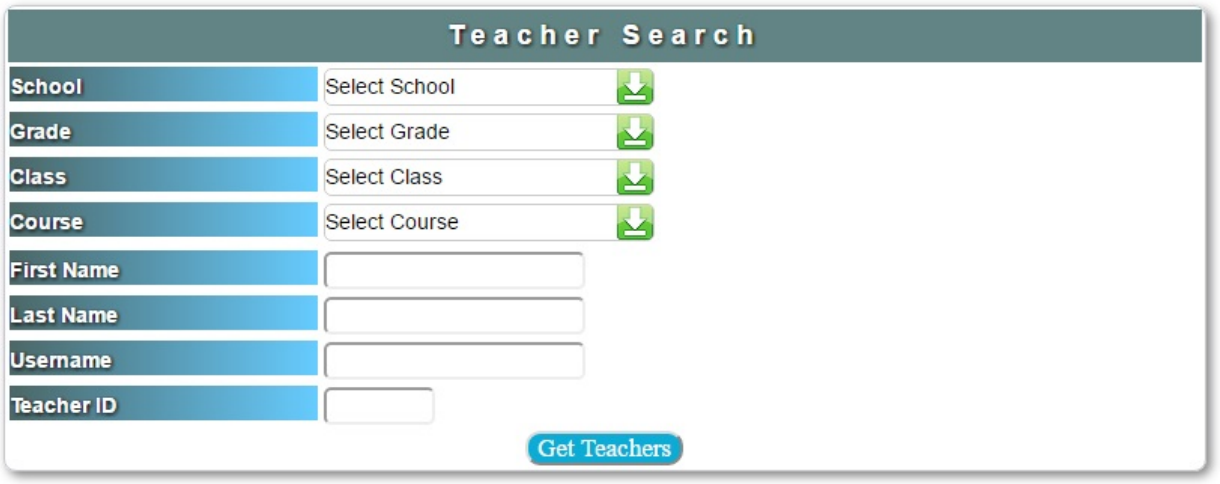
When you finish, click Submit button to create new teacher profile. The system will respond with the following confirmation message:

Manage Teachers

To edit the teacher profile, please go to Teachers > Manage Teachers:



You will get Search Teacher screen as follows:



In Search Teacher form, you can search teacher by School, Grade, Class, First Name, Last Name, Username and Teacher ID. You can use one field or a combination of fields to find and access the teachers from the produced teachers list as shown below:

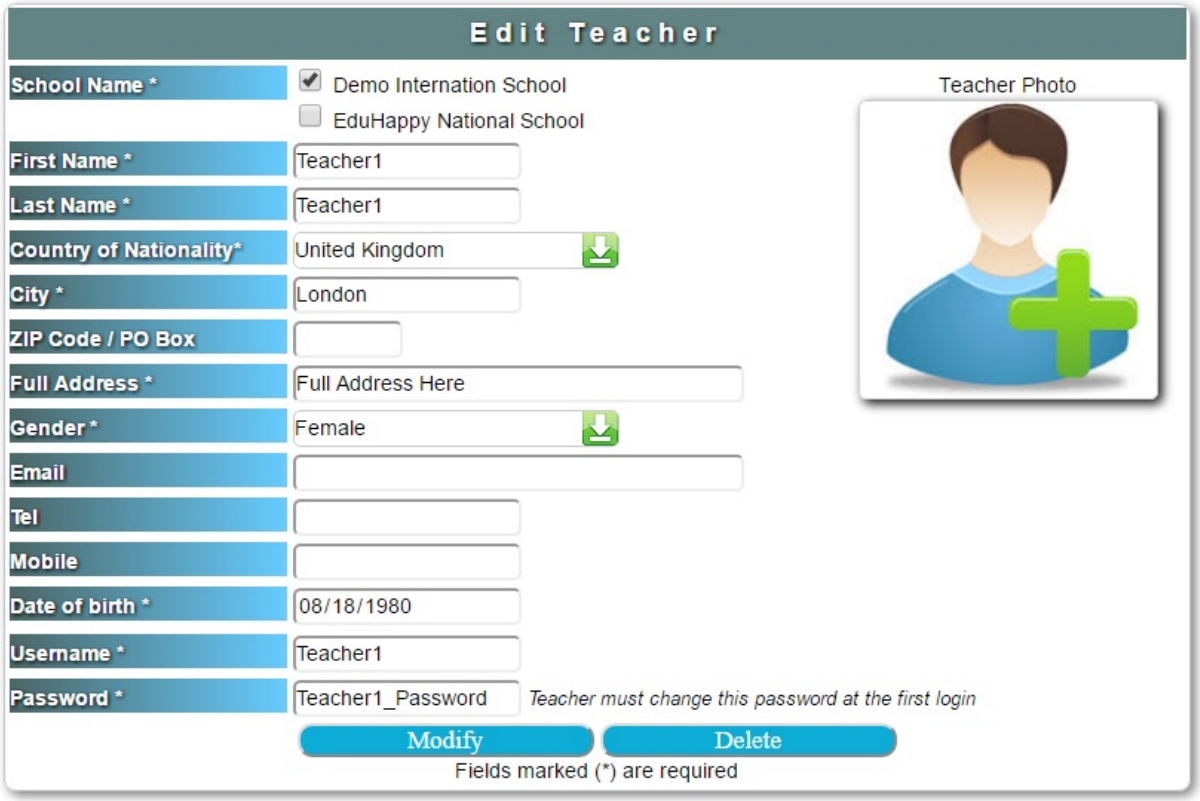
Teacher Search

School	Demo Internation School
Grade	Select Grade
Class	Select Class
Course	Select Course
First Name	
Last Name	
Username	
Teacher ID	

Get Teachers

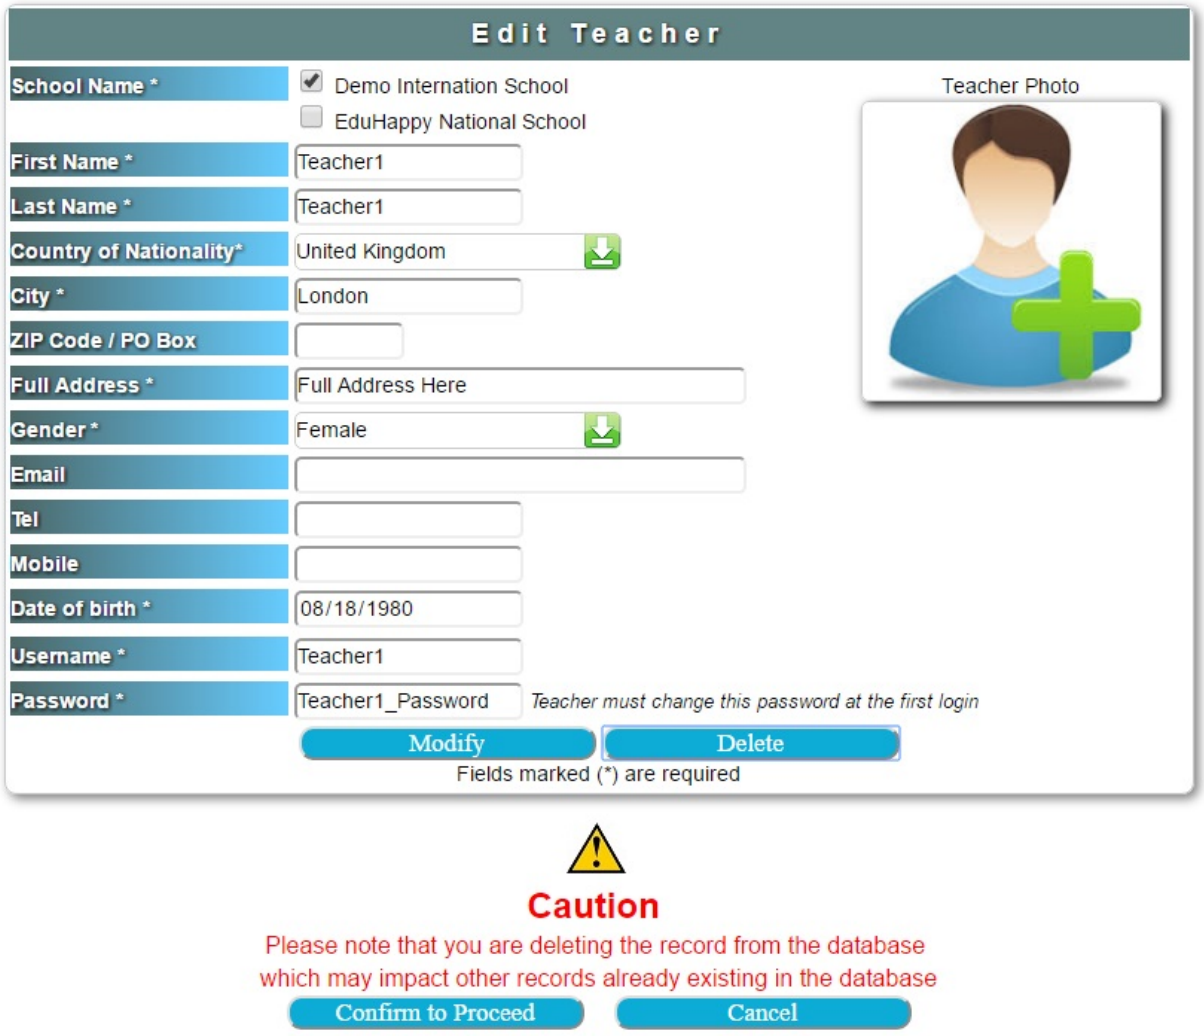
ID	Photo	First Name	Last Name	Username
114		Teacher1	Teacher1	Teacher1
115		Teacher2	Teacher2	Teacher2

If you click on the Teacher ID you will get the edit teacher form so that you can update teacher data as needed. The edit form is shown below:

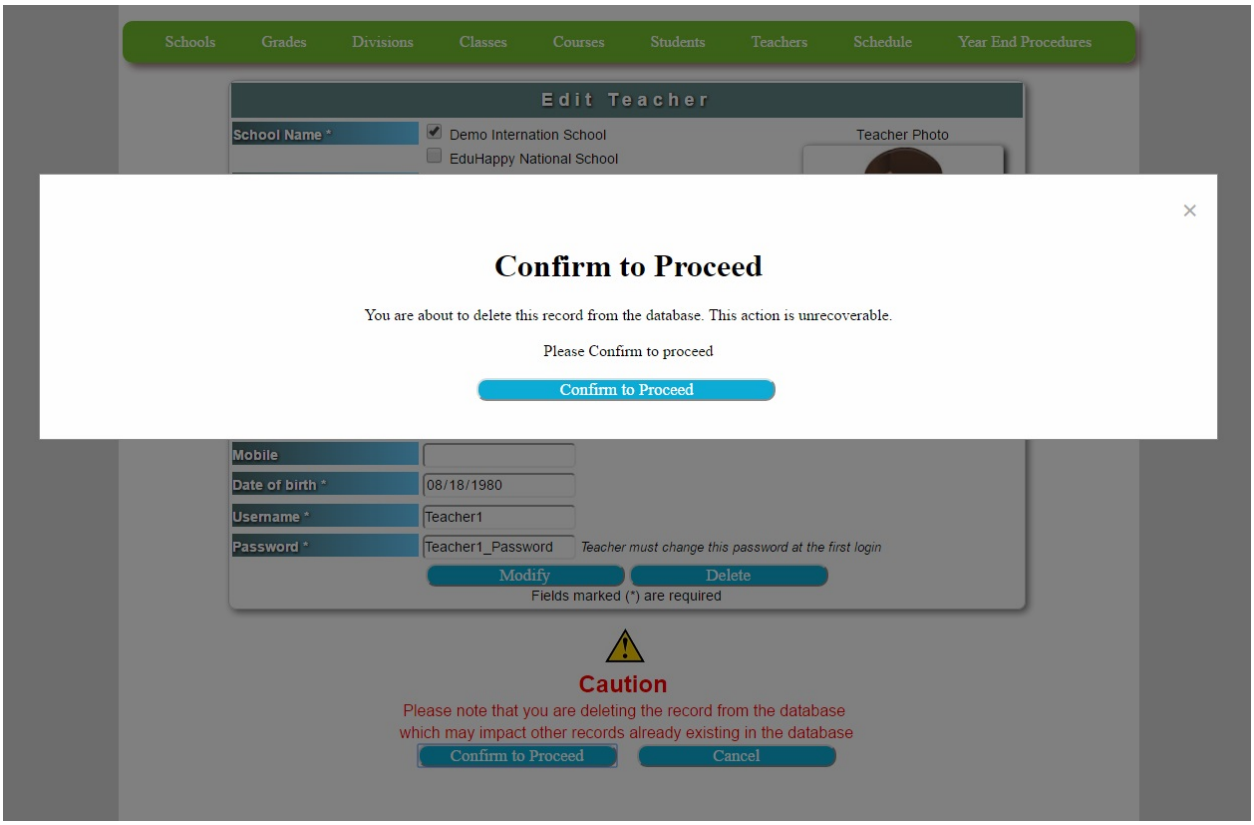


You can now update the form and once finished click Modify button to save the changes.

You can also delete the teacher profile. Click on Delete button if you would like to delete the teacher record from the database. The system will respond with the following caution message:



If you click on “Confirm to Proceed button”, another confirmation dialog will be displayed



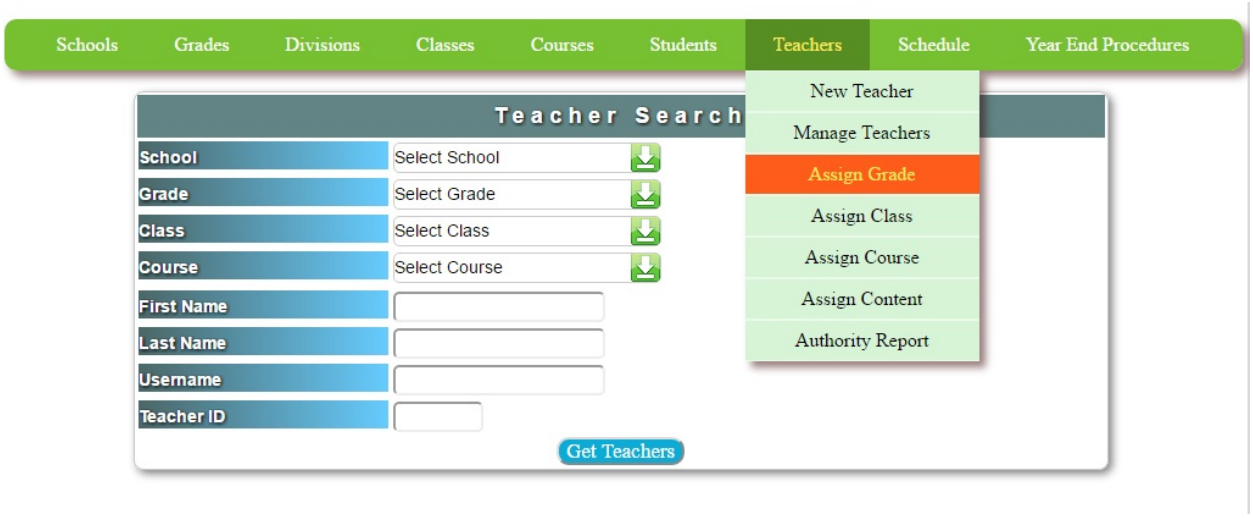
Once you click on the “Confirm to Proceed” button on the dialog box, the system will permanently delete the teacher records and all its related records from the database. Please be careful when taking this action which is unrecoverable. When you delete the teacher record, you will not be able to retrieve any records related to this teacher such as profile and authority matrix.

Teacher Class Authority

In order to build the teacher authority, you will need to start by "Assign Grade" which will assign grades to the teachers based on their schools. Only grades under the teacher's assigned schools will be available.

Assign grade

To assign grades to the teacher, go to Teachers > Assign Grade:



You will then get the Search teacher screen to search and find the teacher to whom you need to assign the grades.

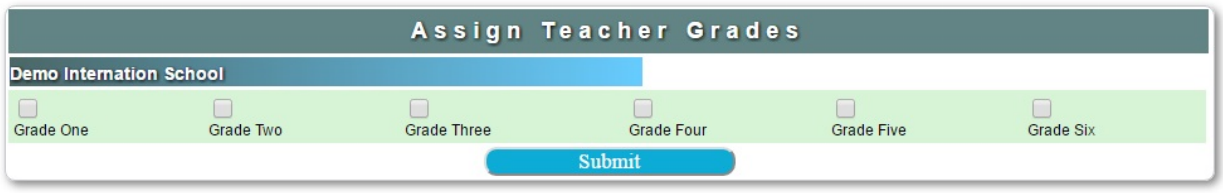
Teacher Search

School	Demo Internation School
Grade	Select Grade
Class	Select Class
Course	Select Course
First Name	
Last Name	
Username	
Teacher ID	

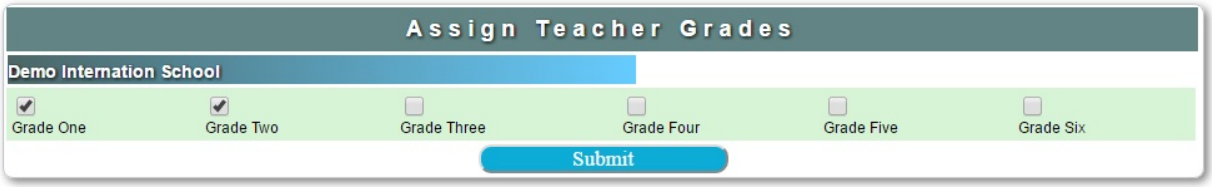
Get Teachers

ID	Photo	First Name	Last Name	Username
114		Teacher1	Teacher1	Teacher1
115		Teacher2	Teacher2	Teacher2

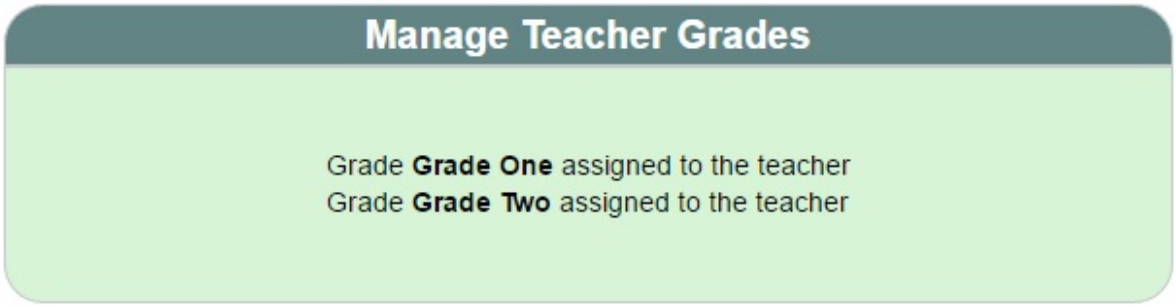
Select the teacher and you will automatically be provided with the Assign Grade form as follows:



Select the checkbox next to each grade you would like to assign the teacher to as follows:

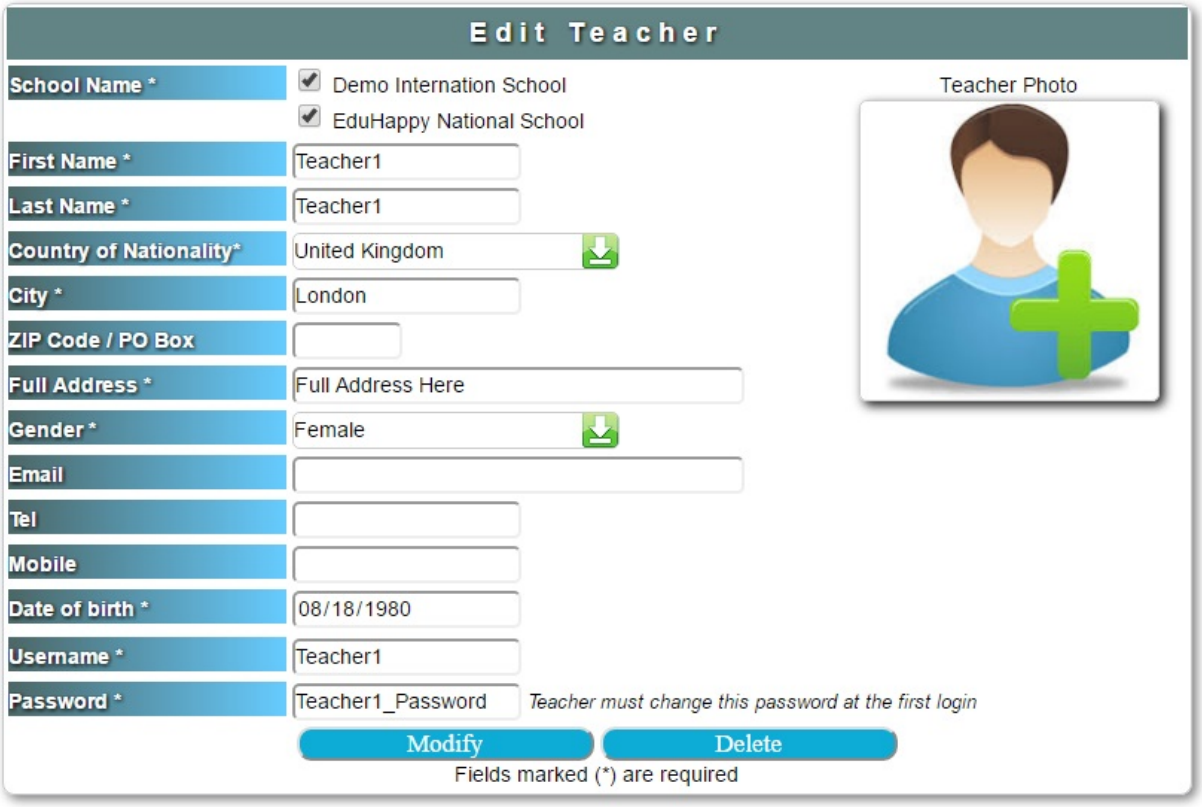


Click Submit to save the changes. System will respond with the following confirmation message:



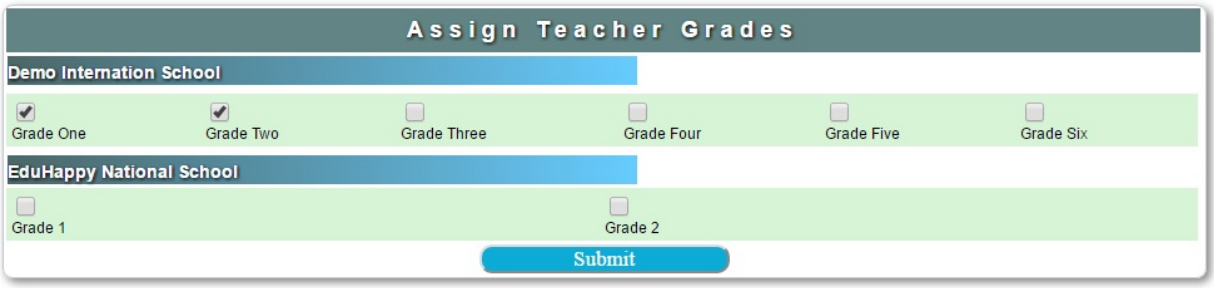
If you need to add more grades or remove any of the previously assigned grades, please go to Teachers > Assign Grades and access the same form to select or deselect the grades.

Now it's important to note that only the school "Demo International School" and the related grades are shown in the form. If we edit the Teacher Profile to add another school, this added school and its related grades will appear in the form. Let's edit the teacher profile to assign another school:



As you can see, we have selected the checkbox next to "EduHappy National School" to add it to the teacher.

Now let's again try to assign new grades to the teacher. In this case, we will get the following form:



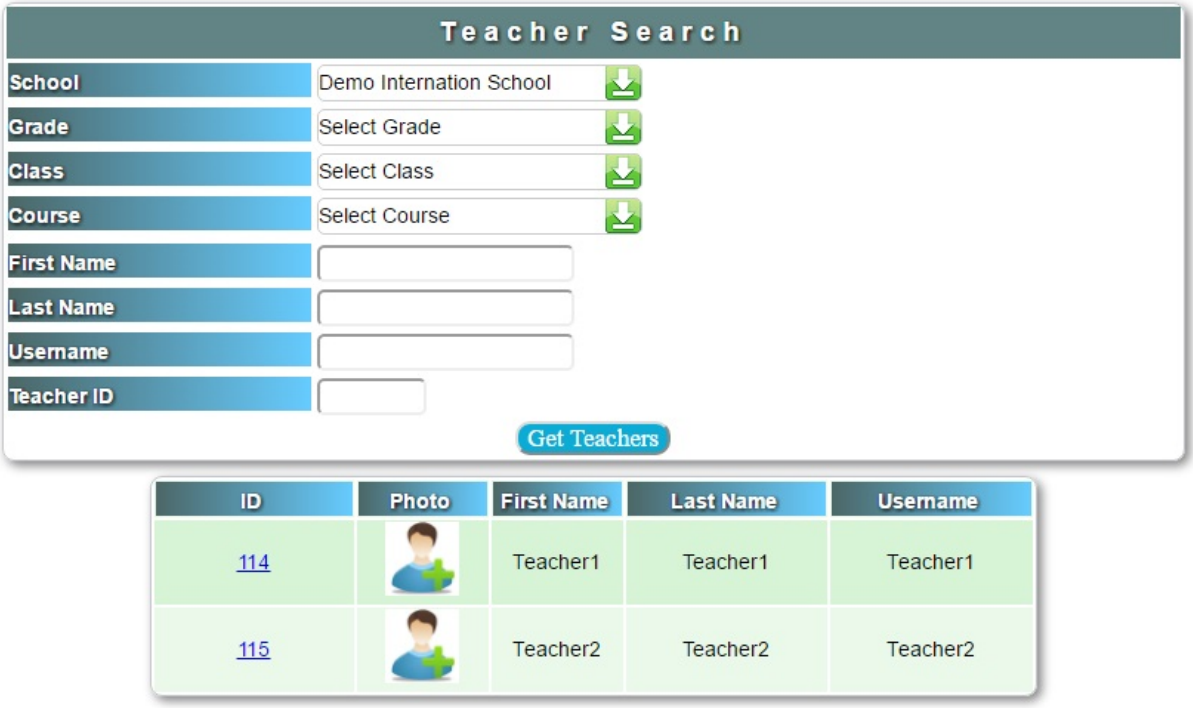
Note that the new school with all the related grades are now shown in the form and you can select one or more of these grades to assign to the teacher and add them to her/his authority list.

Now since we have assigned some grades to the teacher we will go to the next step in building the authority matrix which is Assign Classes.

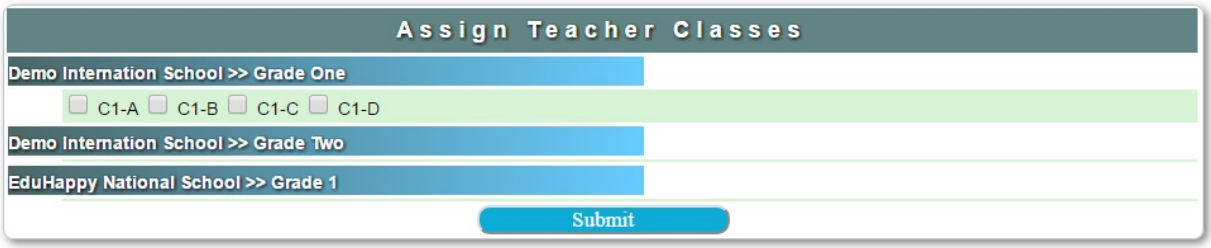
Assign Class

In order to assign classes to the teacher, you go to Teachers > Assign Class

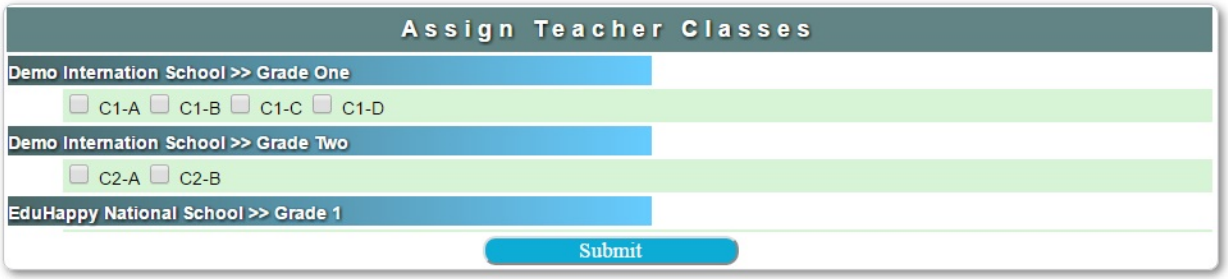
You will again get the Search Teacher screen in order to search, find and access the teacher to whom you would like to assign classes.



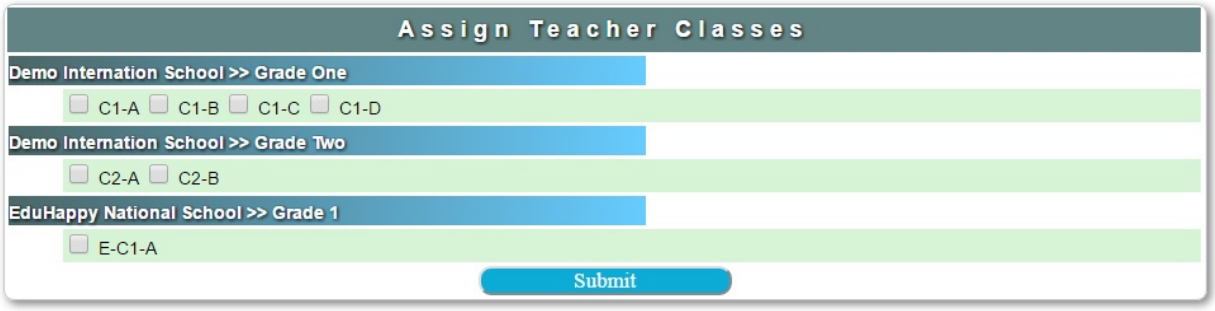
Select the teacher and you will automatically be provided with the Assign Classes form as follows:



Note that there are classes under Grade One while no classes under Grade Two since we haven't yet created any classes under Grade Two. We have created two classes under Grade Two; C2-A and C2-B. Now check this form again and you will find that the newly created classes will appear under Grade Two.

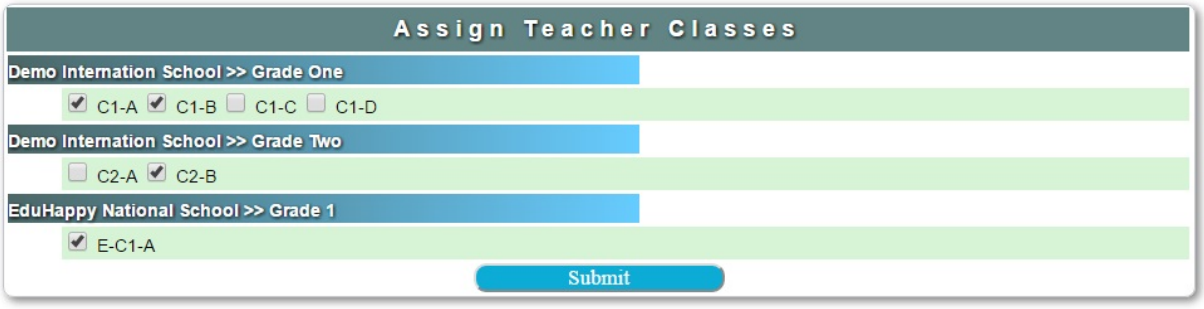


Note also that the same scenario happens with the school “EduHappy National School”. Although the teacher is assigned Grade 1 under this school, there are no classes showing up because we haven’t yet created any classes under Grade 1 in this school. Let’s create a class called E-C1-A under Grade 1 and check this form again:

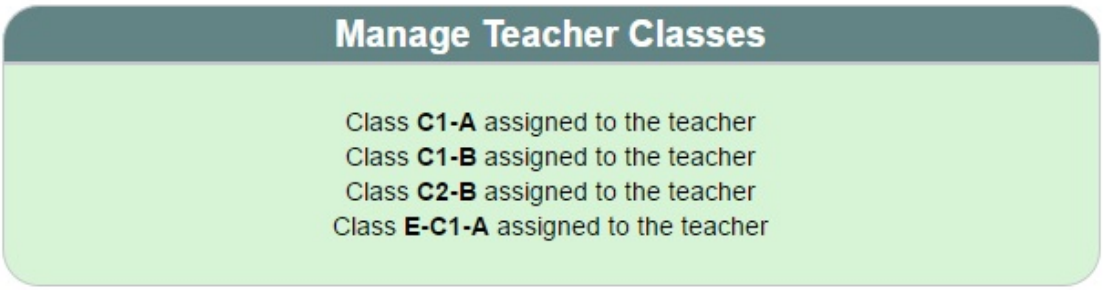


Now you can notice that class E-C1-A is showing up in the form is now available for you to add it to the teacher authority list.

Select the classes you would like to assign to the teacher:



Then click Submit button to save the changes. System will respond with the following confirmation message:



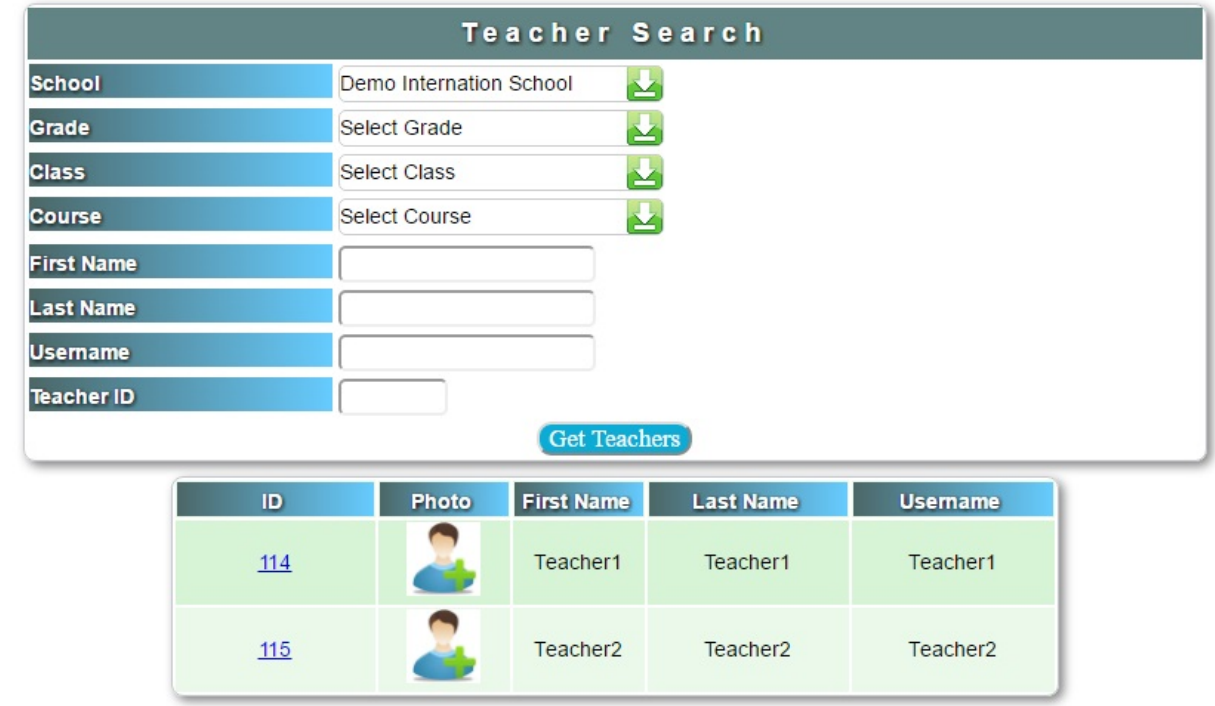
If you need to add more classes or remove any of the previously assigned classed, please go to Teachers > Assign Class and access the same form to select or deselect the classes.

Now after we have assigned some grades and some classes to the teacher, the next step in building the authority list process is to assign courses for that teacher to teach in the assigned classes.

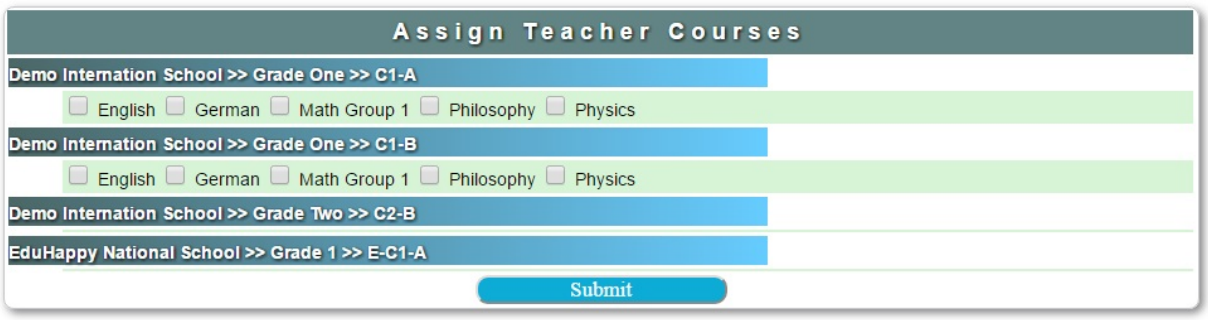
Assign Course

To assign course, go to Teachers > Assign Course:

Search the teacher and you will get the teachers list to select from as below:

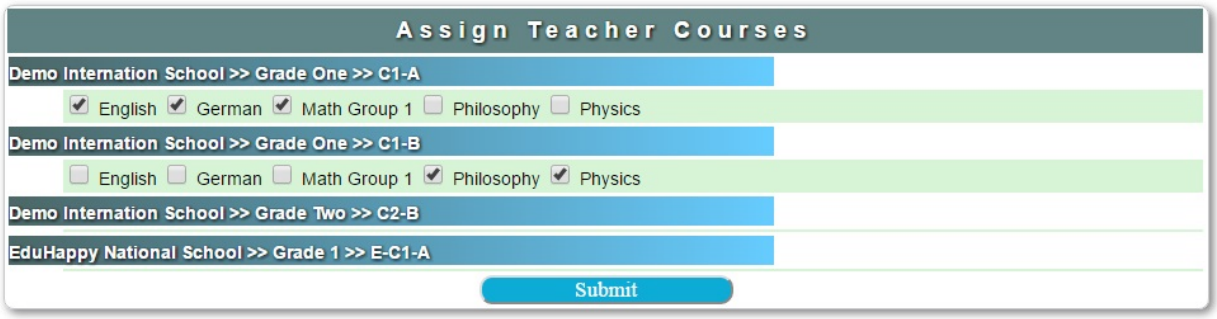


Select the teacher and you will automatically be provided with the Assign Course form as follows:

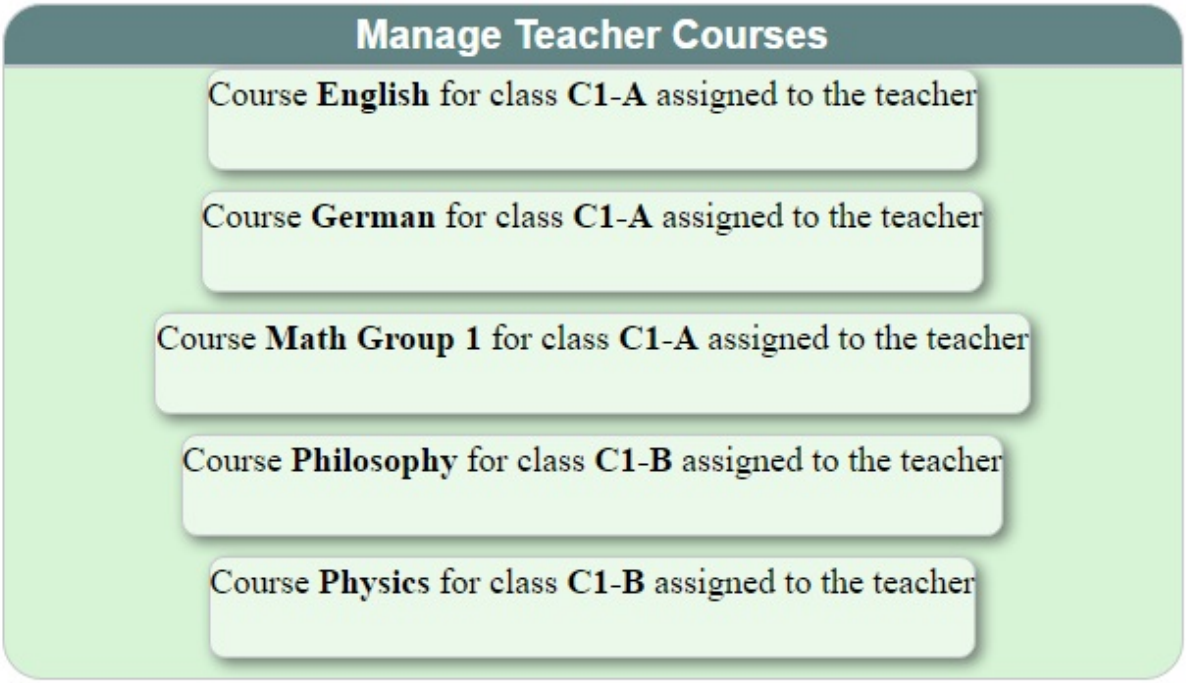


As you can notice, there are courses showing up under Demo International School > Grade One because we have created courses under this grade. On the other hand, you will also notice that there are no courses under Demo International School > Grade Two or Eduhappy National School > Grade 1 because we haven't yet created any courses under these grades. You can try yourself what happens when you create under these two grades.

Now select the courses by checking the checkbox next to each course you need to assign to the teacher:

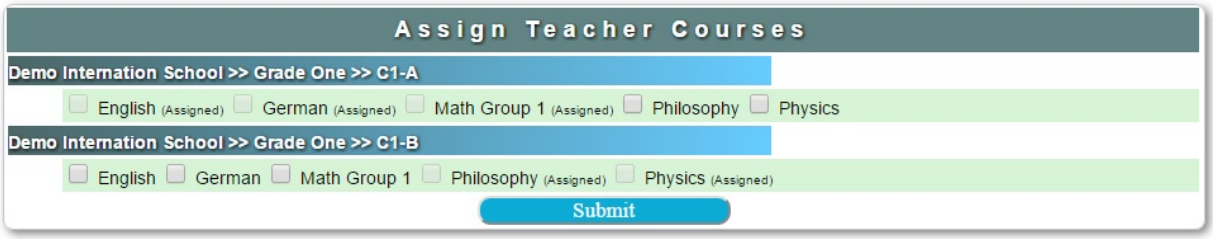


When you finish, click Submit button to save changes and add the courses to the teacher's authority list. The system will respond with the following confirmation message:

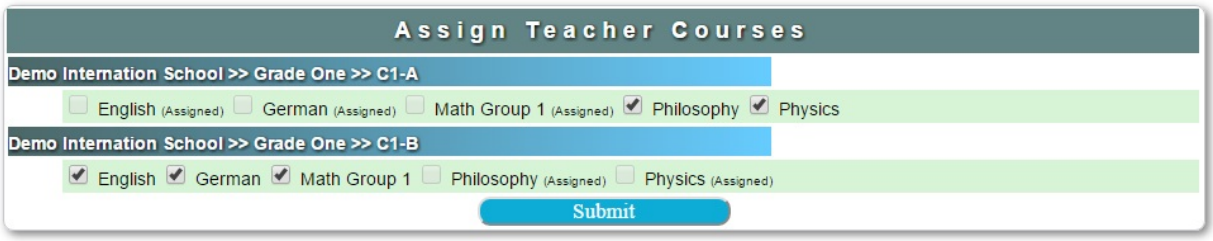


Important Rules:

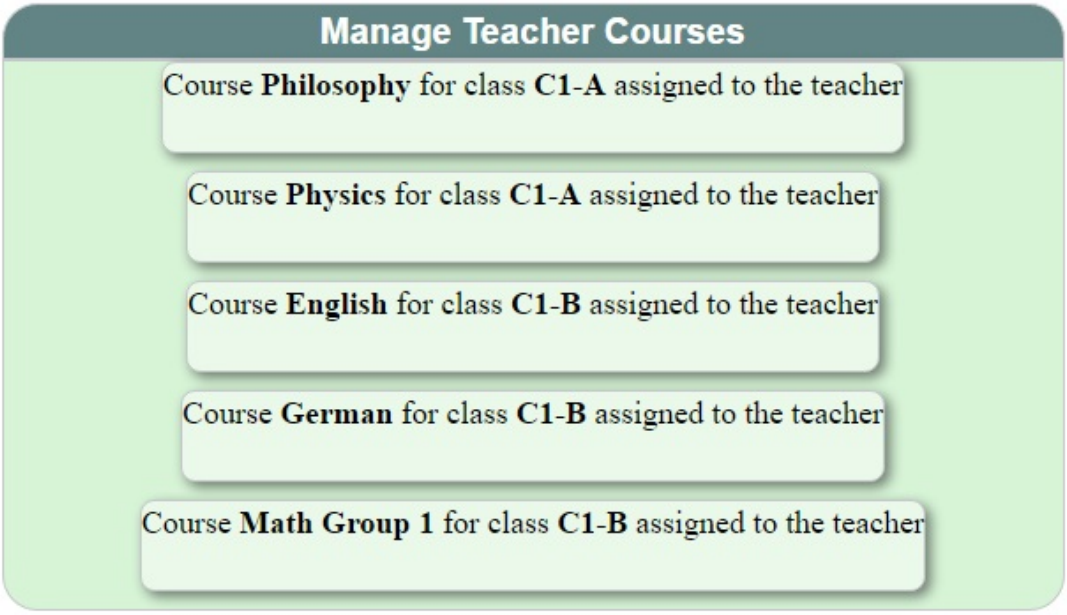
The Same course can only be assigned to one teacher under the same class. Let's see what happens when we try to build authority list for Teacher 2. We will assume that we have assigned Teacher 2 Grade One under Demo school and Class C1-A and C1-B under Grade one. Now let's try to assign courses to that teacher:



Look at the courses that you have previously assigned to Teacher 1. You will notice that the checkbox is dimmed which means you cannot select and add these courses to Teacher 2. You will also notice the word (Assigned) next to the course name. This is to inform you that this course is already assigned and you cannot assign it again to any other teachers. The remaining courses are available to be assigned. Check the checkboxes next to each of the courses you need to assign to Teacher 2 as below:



Click Submit button to add these courses to Teacher 2 authority list. System will respond with the following confirmation message:



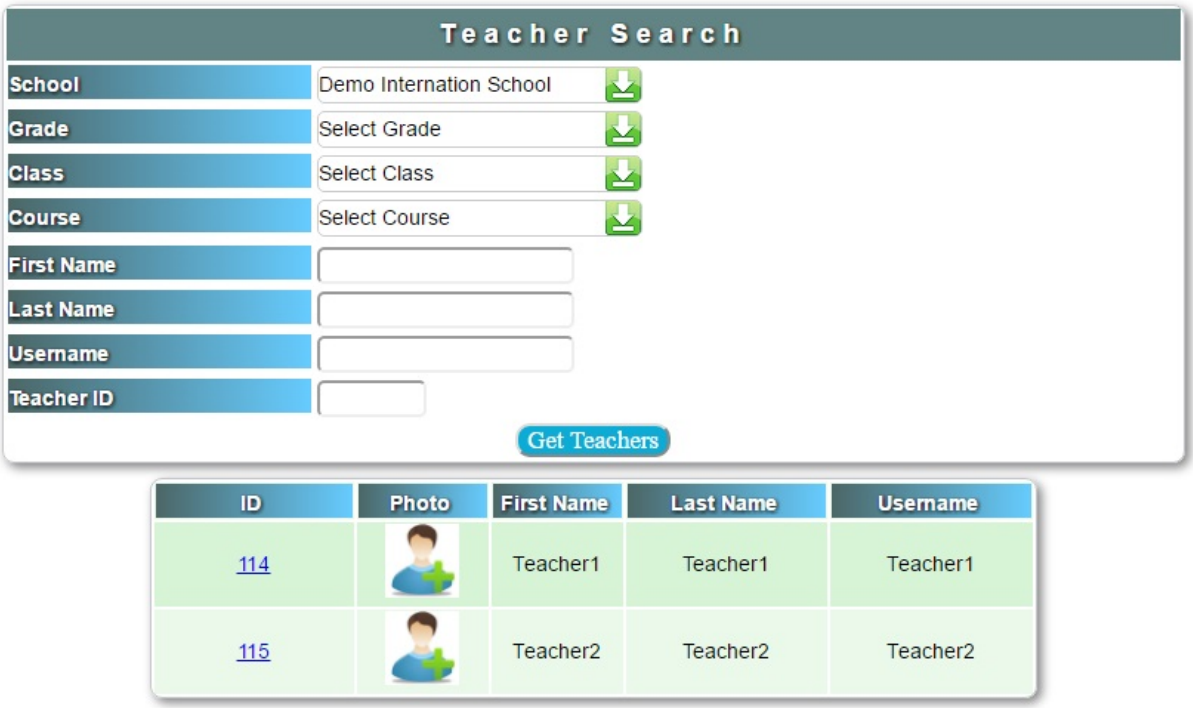
Teacher Content Authority

As mentioned earlier, the content authority is the list of courses for which the teachers are authorized to create and upload content. By course content we mean the course e-books, the structuring of the course into units, the lessons under each course unit, the assignment category which is responsible for classifying the assignments into, for example, homework, class work, quizzes, and so on. Content also includes the Assignments themselves which can be standard and non-standard. Standard Assignments are the assignments created by the content teacher who is authorized to create content for the specific course. Standard Assignments cannot be edited or deleted by any teacher who does not have content authority for the course that contains this assignment. Standard Assignment also can be shared between all class teachers who have class authority to teach the course that contains this assignment. We call it Standard because we believe that these assignments are coming with the course curriculum to be given to all students without differentiation. They will also be having same "maximum possible points" so that when the students are graded on that assignment they will be fairly evaluated since the maximum grading is the same. On the other hand, the system provides another type of assignments called non-standard assignments. These assignments are Class Teacher tailored assignments which mean they are created by each teacher in her/his class(s) and cannot be shared with other teachers. This is given as a sort of flexibility to allow teachers to create their own assignments and make their own evaluation on some specific aspects they might think not fully covered by the standard assignments. The non-standard assignments have their own grading points based on the judgment of each teacher who creates the assignments and this teacher is the only one who can edit or delete these assignments.

Assign Content

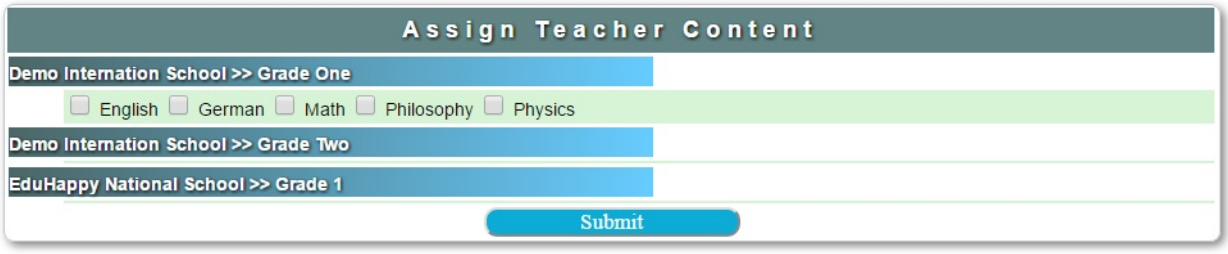
In order to build the Content Authority list, you need to go to Teachers > Assign Content as follows:

You will get the search teacher screen to search, find and access the teacher to whom you would like to assign content authority to.

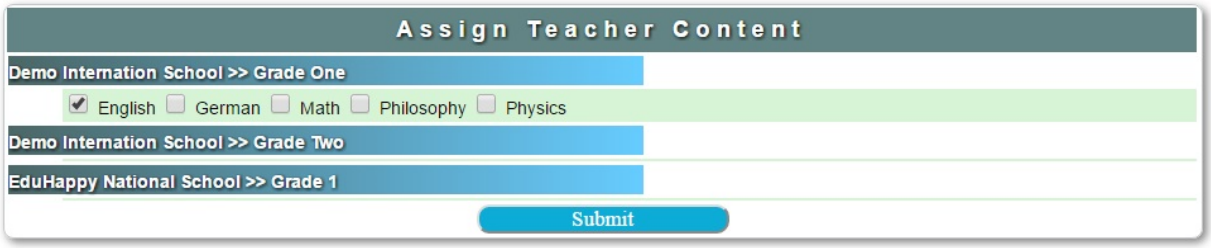


Select the teacher and you will automatically be provided with the Assign Content form as follows:

Note: Class Teacher can also be a Content Teacher in the same time.

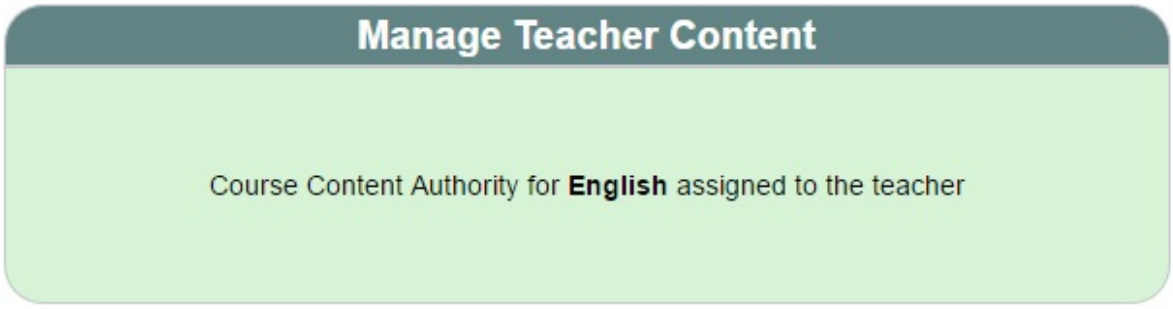


Select the course you would like to assign its content authority to the teacher as below:



Assign Teacher Content
Demo Internation School >> Grade One
English
German
Math
Philosophy
Physics
Demo Internation School >> Grade Two
EduHappy National School >> Grade 1
Submit

Click on Submit button to add the course to the Content Authority list related to that teacher. The system will respond with the following confirmation message:

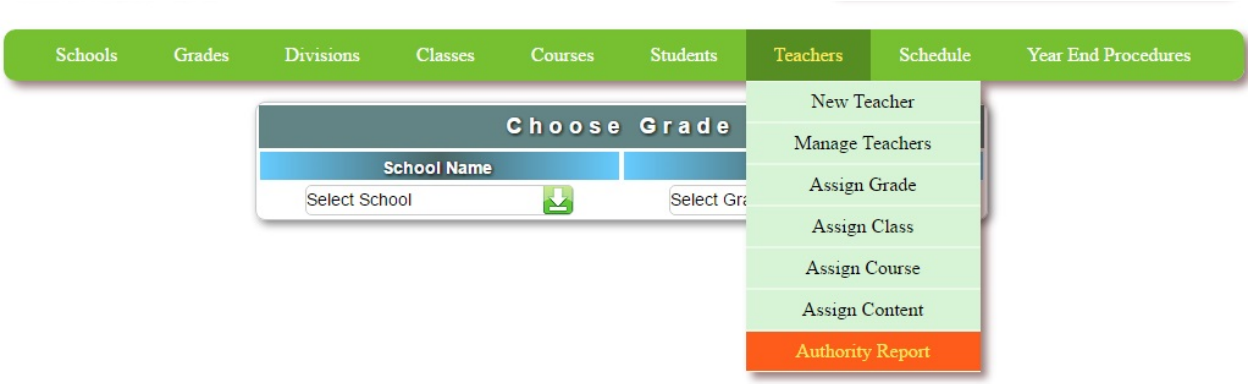


Note that there is no restriction on the number of teachers who can be authorized to create and upload course content. In other words, you will be able to assign the same course to many teachers to be added to their content authority lists.

Authority Report

Authority Report gives you all the details about the teacher class authority as well as the teacher content authority per course.

Go to Teachers > Authority Report as below:



You will get two drop down lists as below:

Select a school and then select the grade for which you want to get the authority report. Once you selected the grade, the following report will be displayed:

As you can see from the previous report, all the course we have created under Grade One are listed with teacher class authority and content authority next to each course. This will give you the information required to recognize what course has been assigned to what teacher whether to teach in a class or to create and upload content. For instance, you now know that English course is already assigned to Teacher 1 to be responsible for its content while rest of the courses do not have any content teachers assigned.

Schedule Management

Schedule Management System is an integrated and automated system that builds and manages the schedule for each class in the school. It integrates with the school recognize the weekends and exclude them from the weekdays. It also integrates with the grade session to recognize how many sessions for the grade are there and the time from and time to for each session and displays the sessions in each class schedule under this grade. It integrates with the course management system to recognize the courses under each grade and list them in the schedule to allow the admin to select the course per session in each day in the weekdays. It also integrates with the teacher management system to recognize, from the teacher authority list, the teacher who is assigned to teach each course under the grade. It integrates with the attendance management system to feed it with the all the details of each session in terms of the teacher who is teaching in that session in what class, consequently what students, and what course in a specific date and time. Once the schedule is built for a class, the teachers will automatically be provided with their schedule and can retrieve the schedule through their Teacher System when they login into their accounts. The students who belong to that class will as well be able to retrieve their class schedule through the Student Portal.

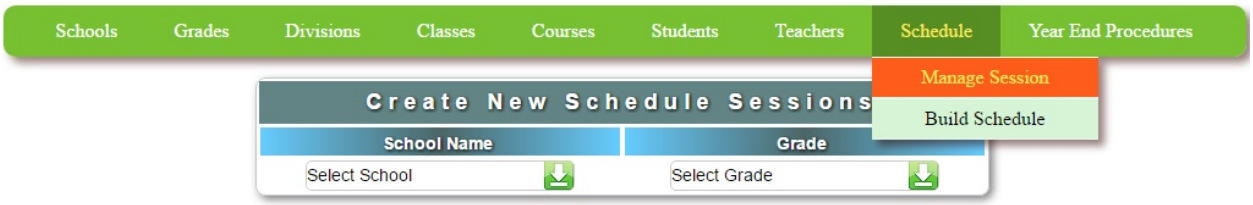
To build class schedule, you will first need to create sessions under the grade to which this class belongs.

Sessions

Manage Sessions

A session is a unit of time in a day. Each grade has its own day sessions. From example, Grade One might have 6 sessions while Grade 6 might have 7 sessions. These sessions may also be different in their time from and time to. For example, session one in Grade one might start at 8:00 AM and ends at 8:45 AM while session one in Grade two might start at 8:00 AM and end at 9:00 AM. Therefore, the system manages the sessions of each grade separately. That means each grade will have to have its own sessions.

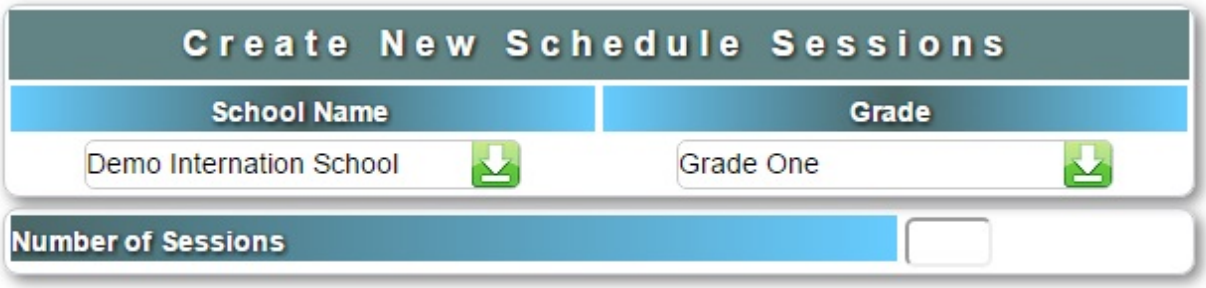
To create and manage sessions, go to Schedule > Manage Session:



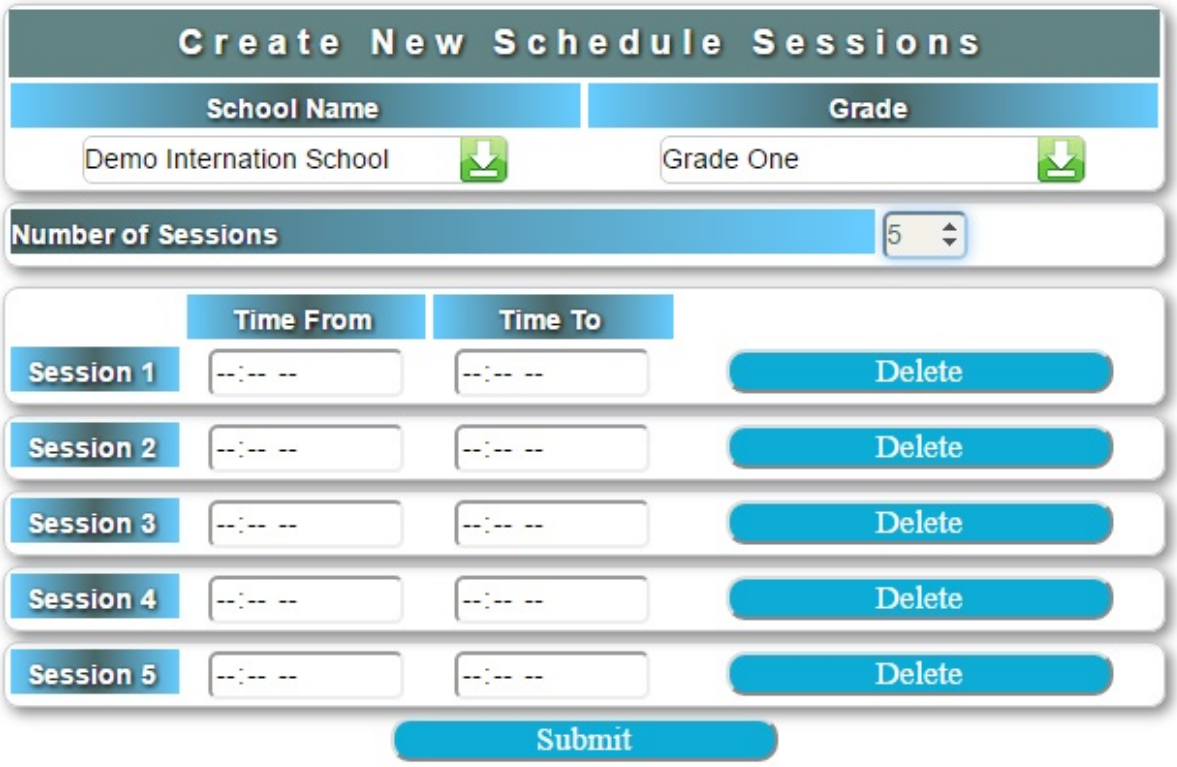
You will get two drop down lists as follows:

As mentioned, each grade will have its own sessions. Hence, you will need to select a school and then select the grade under which you would like to create or manage sessions.

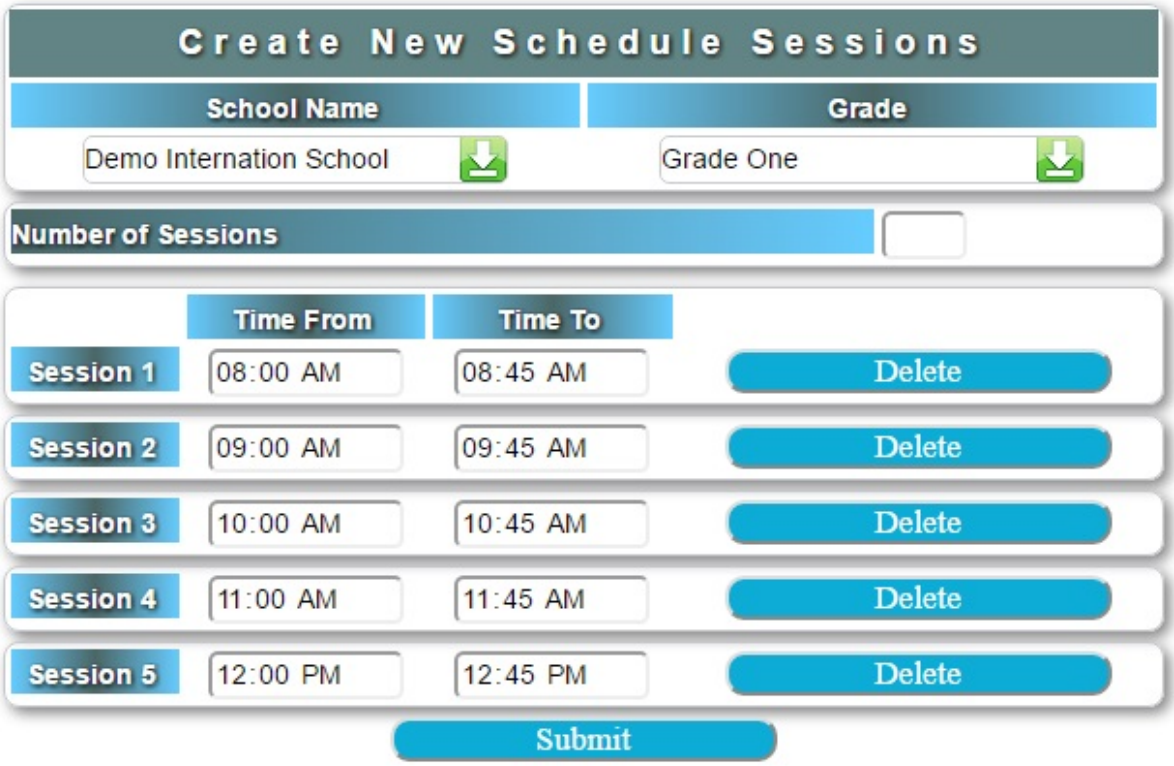
Now select Demo International School and then select Grade One. You will get the following form asking you how many sessions you want to create under this grade:



Enter the number of sessions, let say 5, for Grade One. You will get the following form which consists of 5 sessions with Time From and Time To fields:



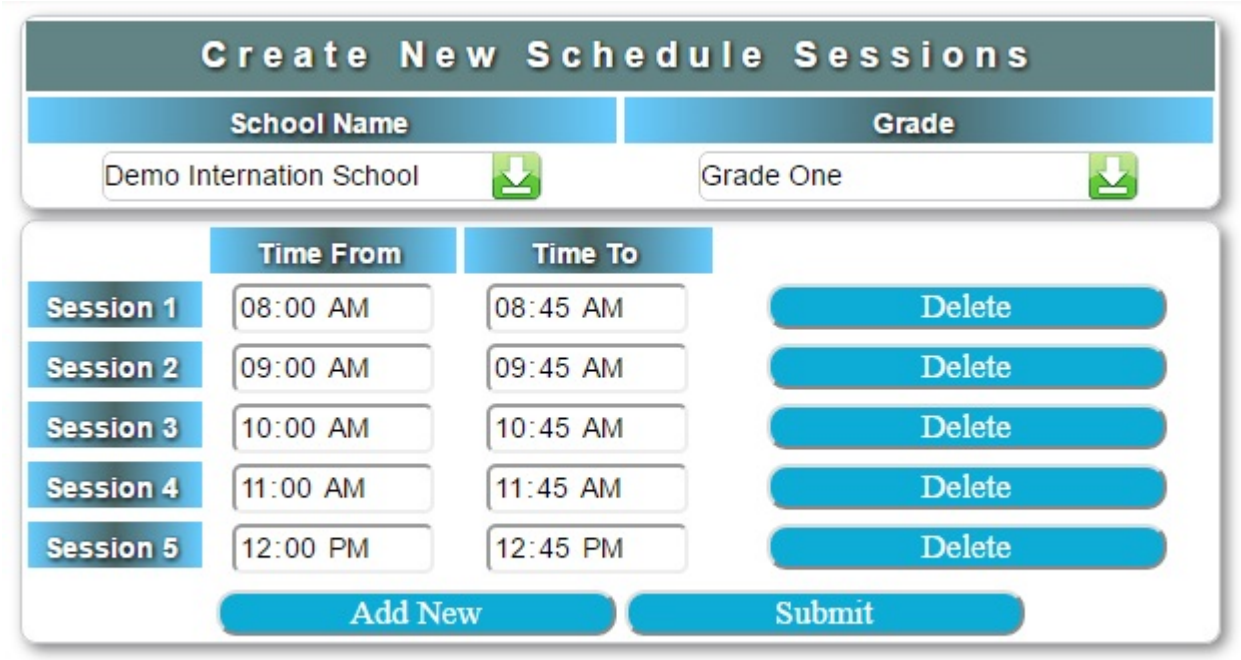
Enter time from and time to for each session as below:



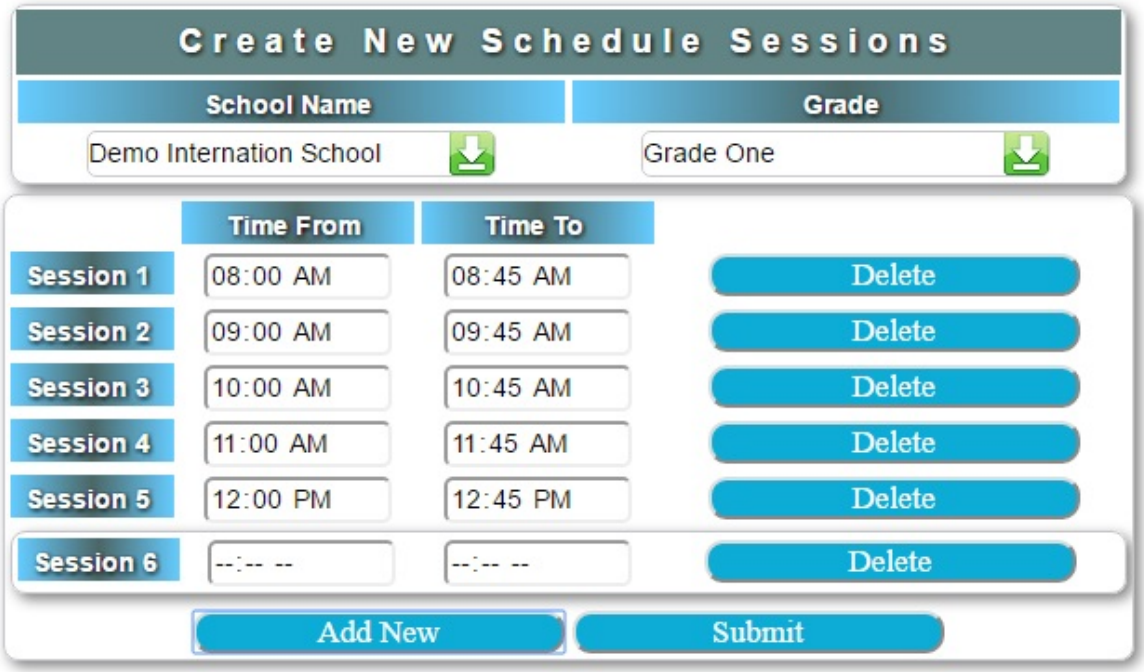
If you would like to delete any session before submission, just click Delete button and the session will disappear.

When finished, click Submit button to create the 5 sessions under Grade One. Once you click Submit button, the system will respond with the following confirmation message:

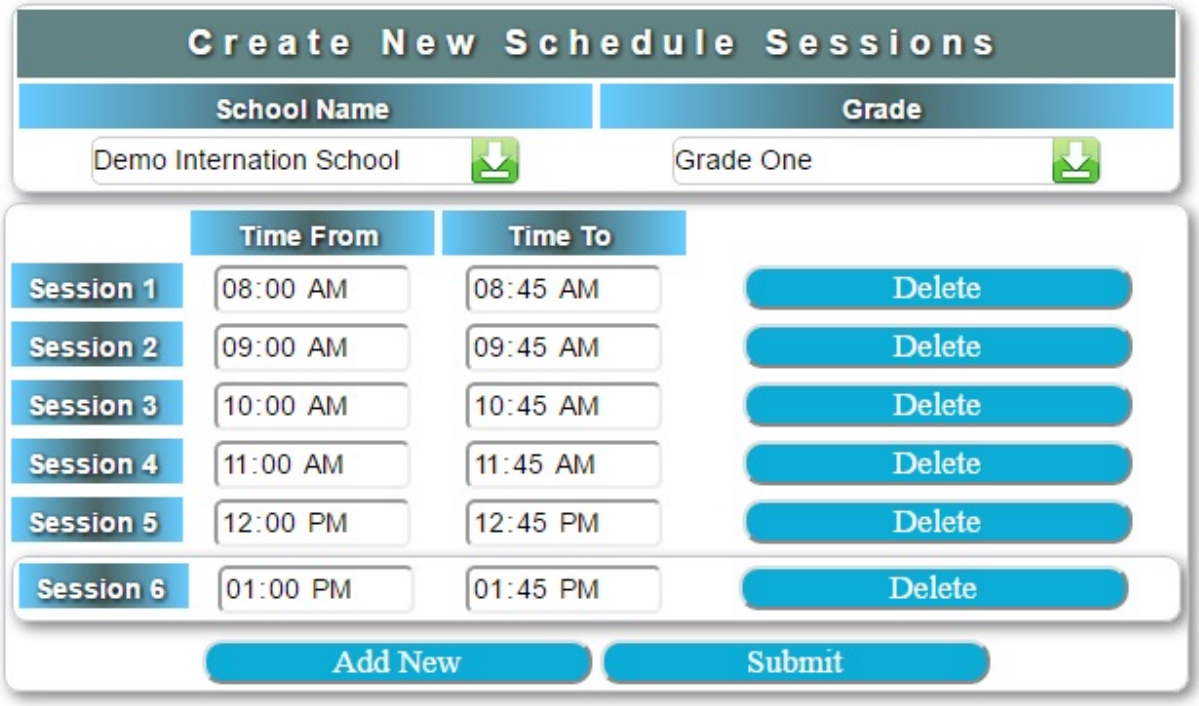
In case you would like to manage these sessions, later on, you can go to Schedule > Manage Session and select Grade One. You will get the following form:



As you can see, you can modify any of the time from or time to for any session or you can completely delete a session if you click Delete button or you can even add a new session if you click on Add New button. Let's click on Add New button to get the following:

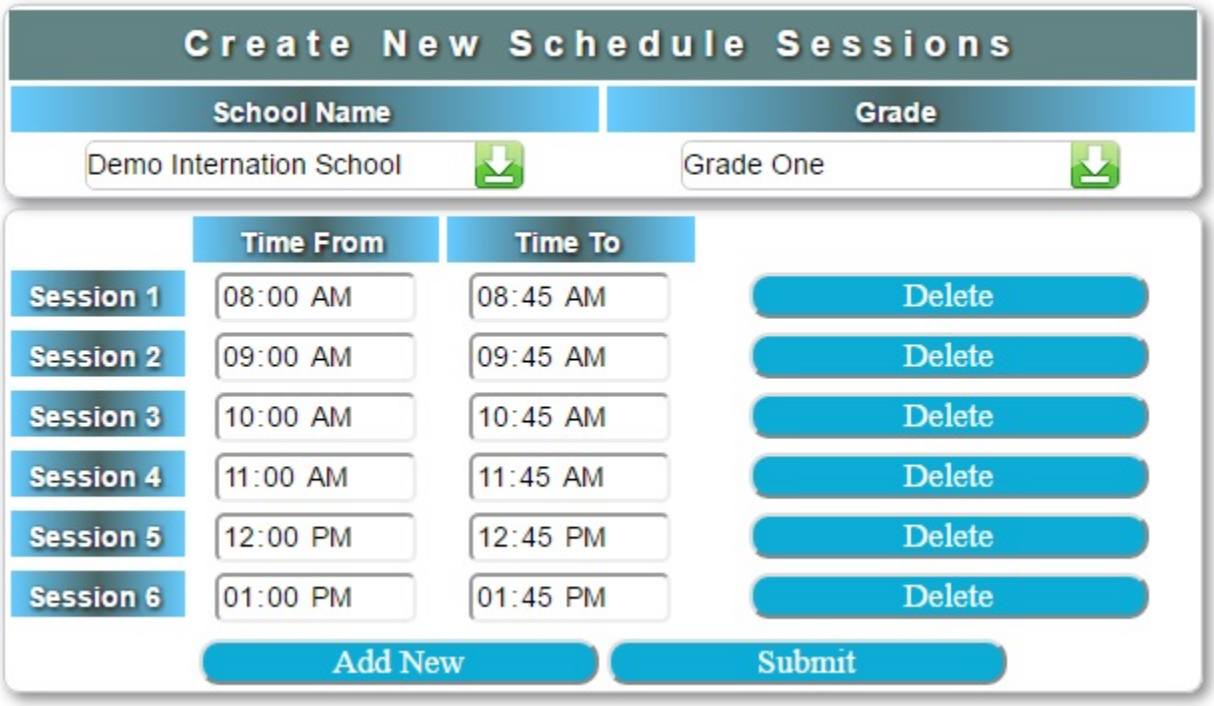


You can notice that session 6 has been added to the form. Just enter the Time from and Time to as below:

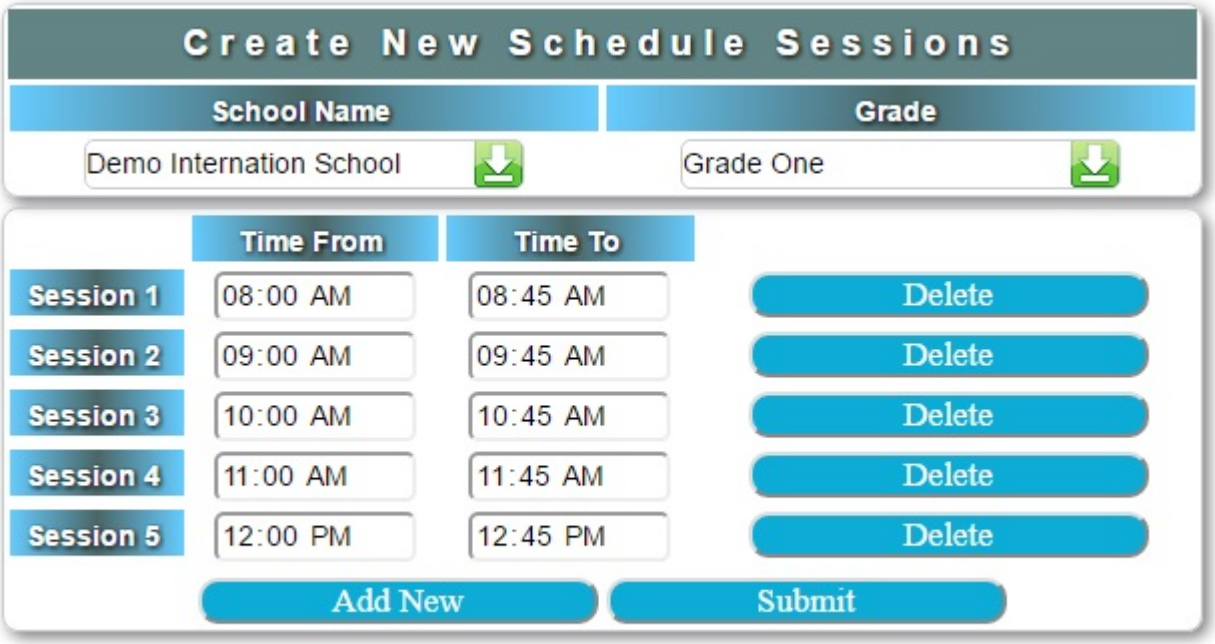


Then click Submit to add the new session. The system will respond with the following confirmation message:

Now get the sessions form again and try to delete session 6 that we have just added:



Now click on Delete button next to Session 6. Now the form becomes as below:



You can notice that Session 6 has been deleted.

Important Rules

Session time from can not be greater than Session time to.

Sessions can never be overlapped

You can enter the time in any order and the system will order the sessions according to their timing.

If there is an attendance taken already in any of the sessions, you will not be able to delete this session and the Delete button will not be available.

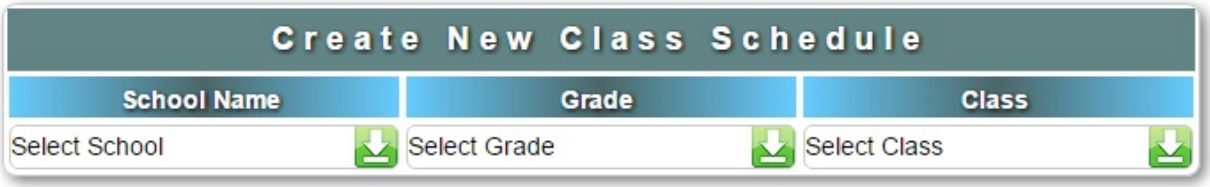
Schedule

Since the schedule is built on the class level, you will have to select the class first and then start building the schedule that will be linked to this class.

Build Schedule

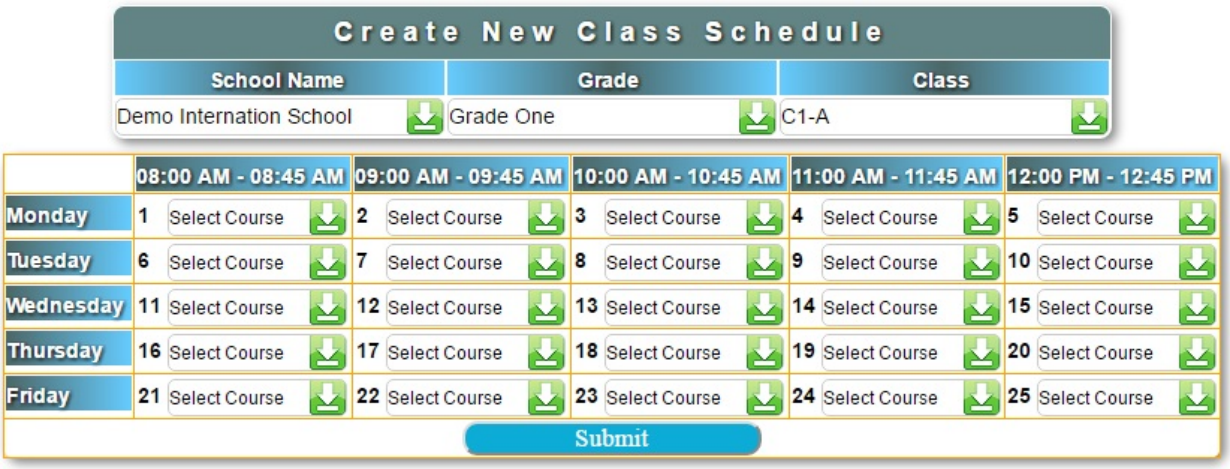
In order to build the schedule, go to Schedule > Build Schedule as below:

You will get three drop down lists:



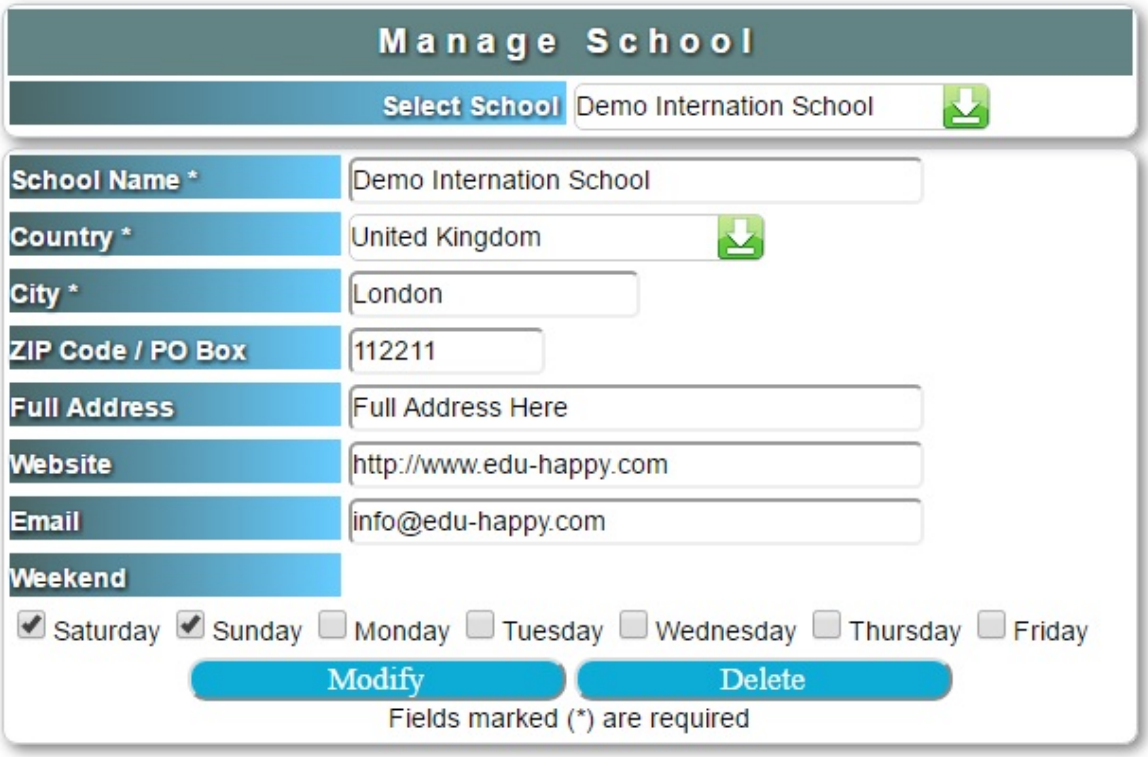
You need to select school, grade and then select the class for which you would like to build the schedule.

Once you have selected the class, the system will display the following form:



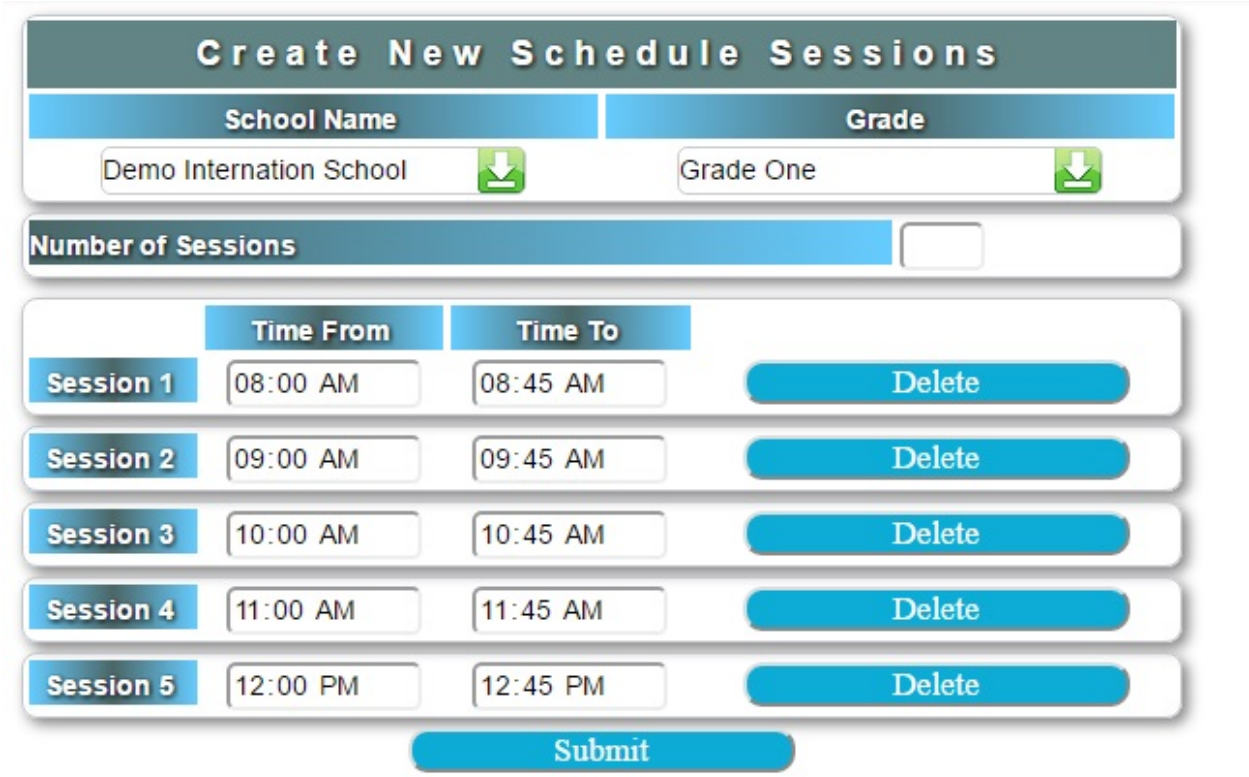
The form consists of:

Week Days: weekdays are presented vertically and include all the week days except the weekend days which are selected when you created the school profile. As a reminder screen, we have shown it below the profile for Demo International School:



Notice that we have previously select Saturday and Sunday as weekend days for that school. Consequently, the schedule Week Days have excluded these two days and displayed the rest of the weekdays as shown in the schedule form.

Grade Sessions: grade sessions are displayed horizontally and they are the sessions we have created earlier in the previous section Manage Sessions. As a reminder screen, we have shown below the sessions form that lists the sessions we have created under Grade One:

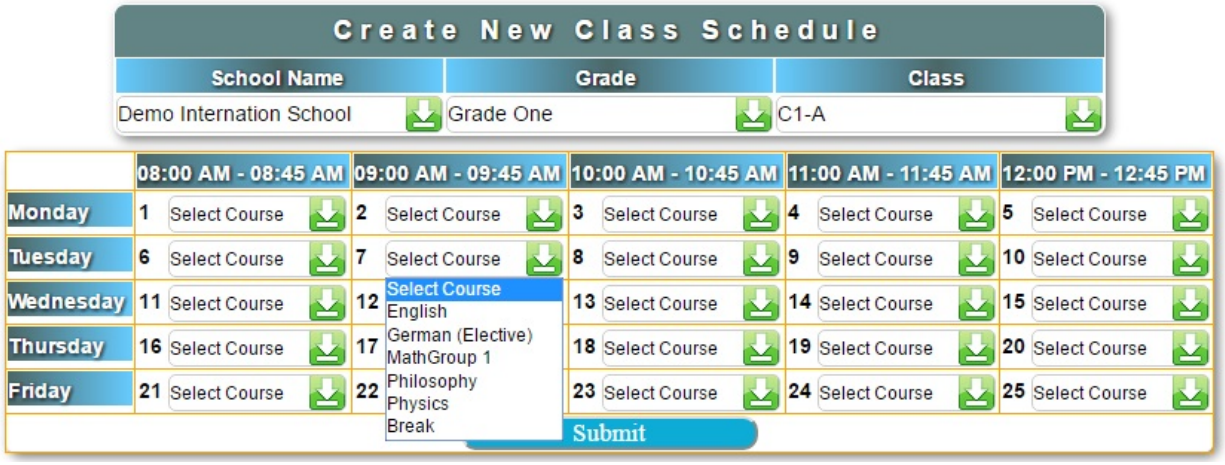


As you can notice, they are the same sessions that are displayed in the Schedule form.

Courses drop down list: This list includes all the courses that are created under Grade One. Since we are building schedule for class C1-A which belongs to Grade One, only courses that belong to Grade One will be listed in this drop down list.

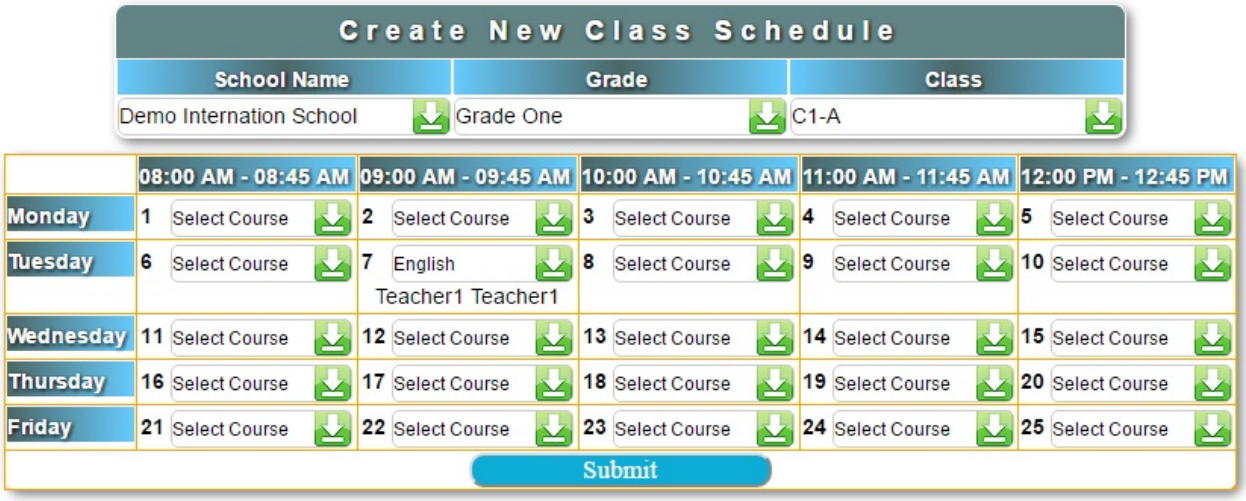
Now, let's start building the schedule. It is extremely easy and straightforward. You just need to select the course from the drop down list for each cell in the schedule. You can also select "Break" instead of the course if the session is a break session. You don't need to select the course in all the cells. Rather, you can leave a certain cell unselected until you decide later what course will be scheduled for that cell.

Click on the arrow to the right of the courses drop down list and select the course that you need to be scheduled at specific session on a specific day:



Notice what are displayed in the course drop down list in cell number 7. They are the courses that are created under Grade One as mentioned before. It will be the same list in all cells not only cell number 7.

Select one of the courses in the list. Let say we select English course in cell number 7, the following will be displayed:



Note that in cell number 7 the English course is now selected and under the drop down list you will see the teacher first name and last name. This is the teacher who is assigned to teach this course in the class C1-A as per her/his class authority list.

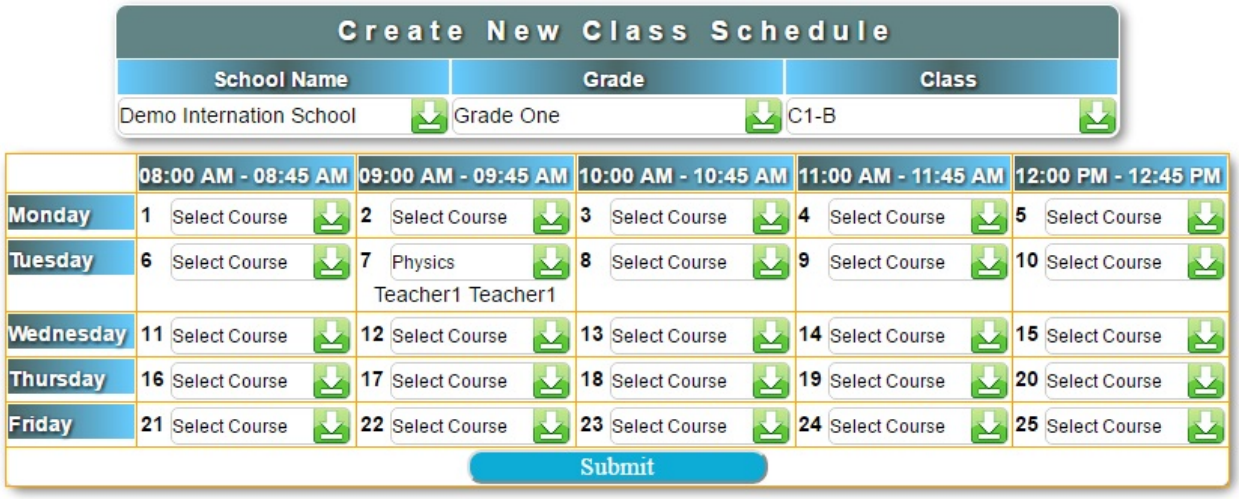
Now click on Submit button to save the selection and the system will respond with the following confirmation message:

According to the above selection, The English course has been scheduled for Tuesday of each week at 9:00 AM and Teacher 1 is the one who will step in the class at that time to teach the course.

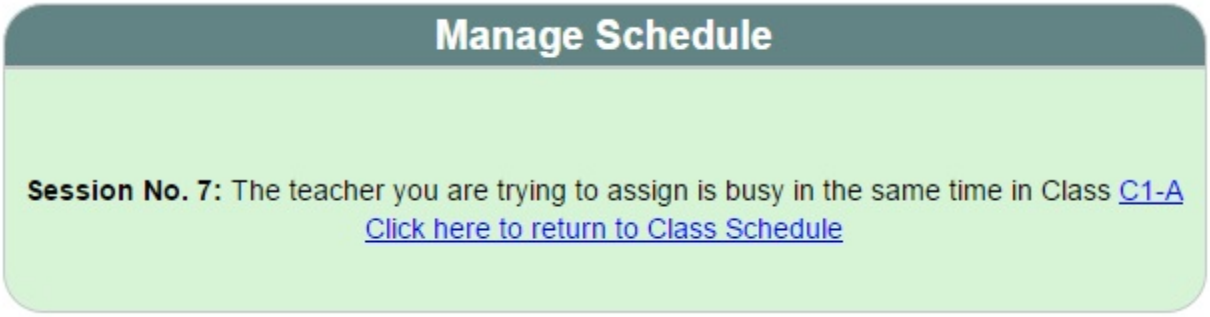
Teacher Conflict Detection

Since there is no way to have the same teacher teaching at two classes at the same time, the schedule system will intelligently check for such a conflict when you try to update any session on the schedule.

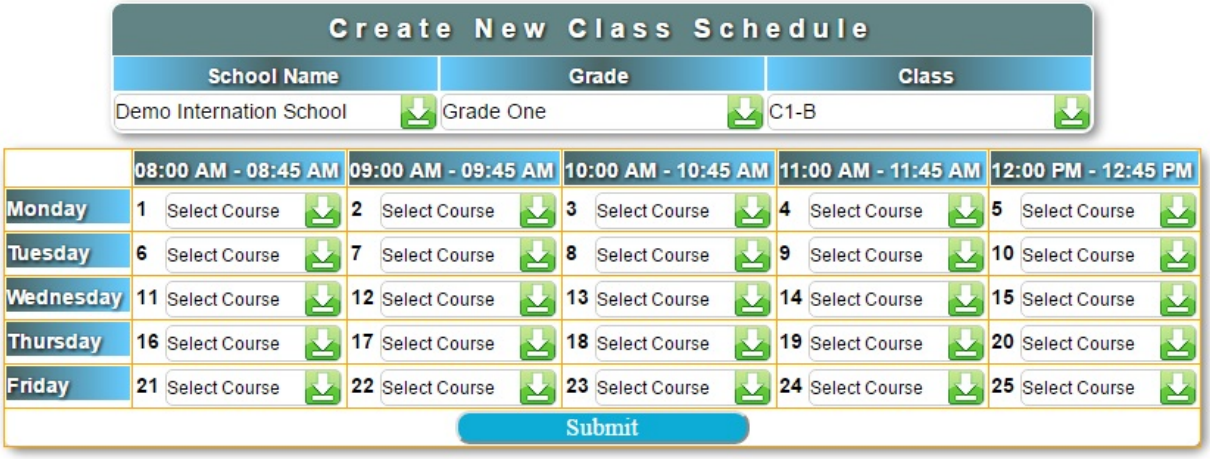
In order to simulate this scenario, go to Schedule > Build Schedule and then select another class, let say C1-B this time. Since Teacher 1 is assigned to the Physics course to class C1-B we will select this course to be scheduled on the same time the same teacher is giving the English course to class C1-A which is in cell number 7 as shown below:



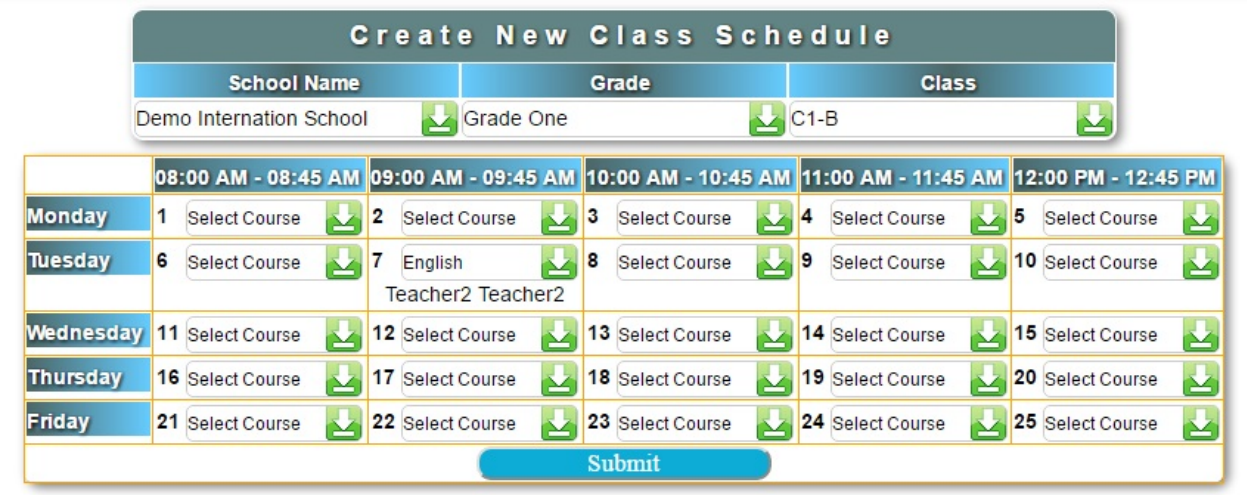
Now click the Submit button. The system will detect the conflict and will not update the session and will display the following message:



If you click on "..return to Class Schedule" you will find that the session is not updated as below:



Now let's select another course in cell number 7 in class C1-B but this time, we will make sure to avoid teacher's conflict. So even we have chosen the same course, the English course, but since it's been assigned to Teacher 2 for class C1-B, then the system will accept it this time since there is no conflict.



Click on Submit button to update the session. The system will respond with the following confirmation message:

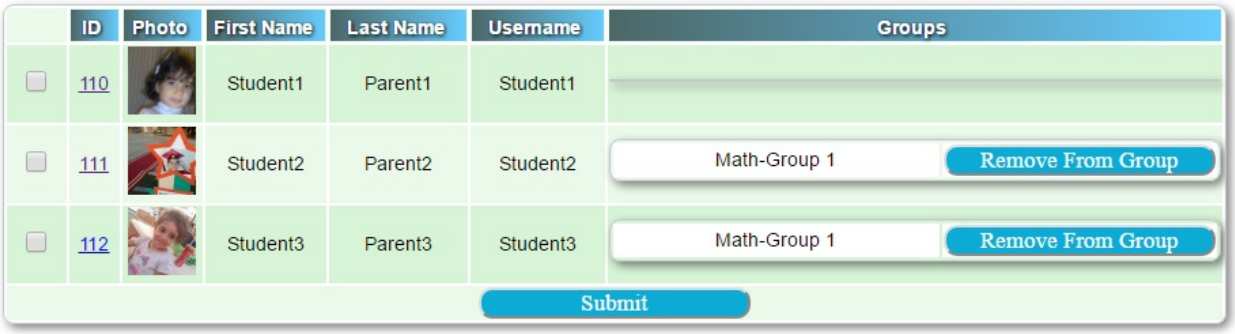
This time, the system accepted the update and scheduled the English course at the same time without any conflict since the teachers are different.

Student Conflict Detection

Similarly, there is no way to have a same student attending scheduled courses in two different classes at the same time. You may wonder how this may possibly happen while we have the student belong to only one class. To explain this, we need to remind you with those students who may be added to groups and those who may be added to elective courses. In this case, the student may be required to attend the course in another class different than his assigned class.

To simulate these scenarios, we will try to schedule a session in class C1-B, also in cell number 7, that will generate this conflict.

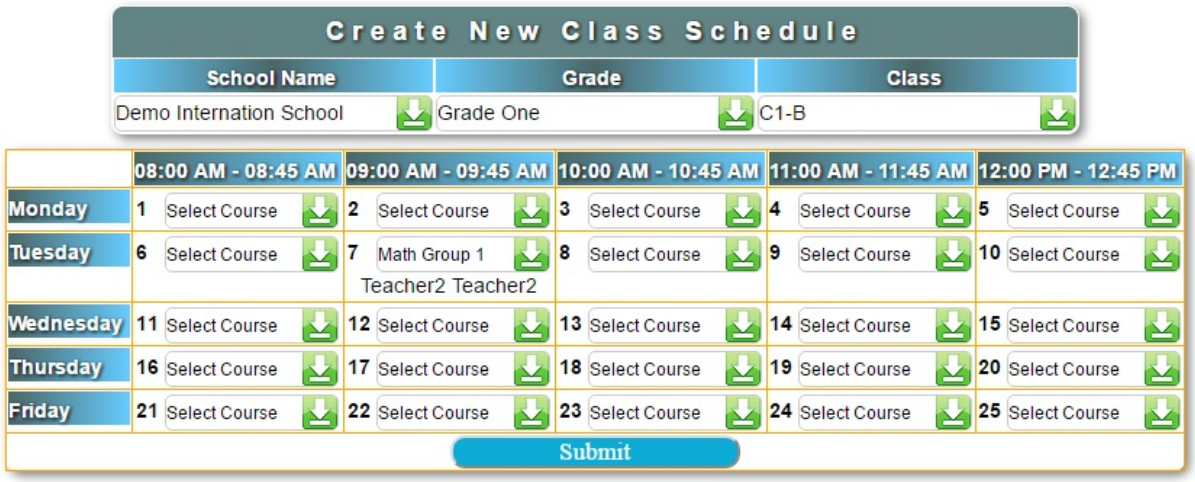
To do this, we will have to remind you that Student2 and Student3 are part of Math-Group1 as shown in the below screen:



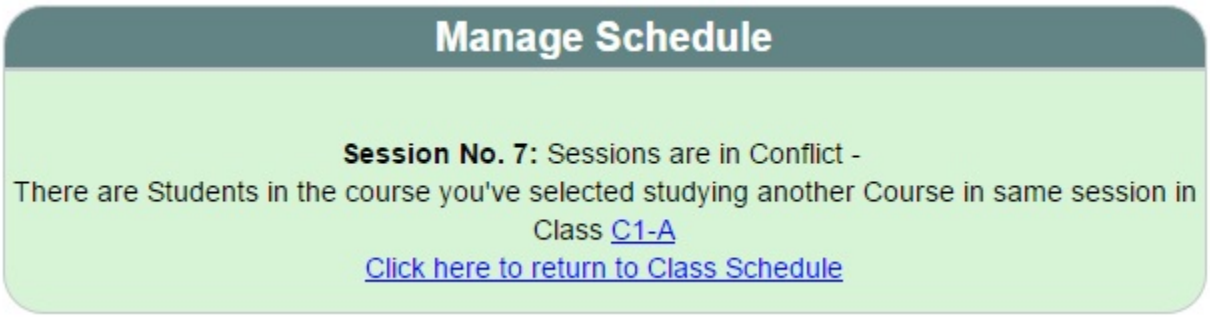
These two students also belong to class C1-A which has a scheduled session, in cell number 7, for English course.

Now, let try to schedule Math-Group1 in class C1-B schedule in cell number 7. This means, the students who belong to Math Group1 are required to attend Math course Group1 in class C1-B. However, since there is the English course scheduled in class C1-A in the same session, then definitely there is a student conflict in this case. How the system will respond to this conflict, let's see.

Get class C1-B schedule and select Math Group 1 in cell number 7 as shown below:

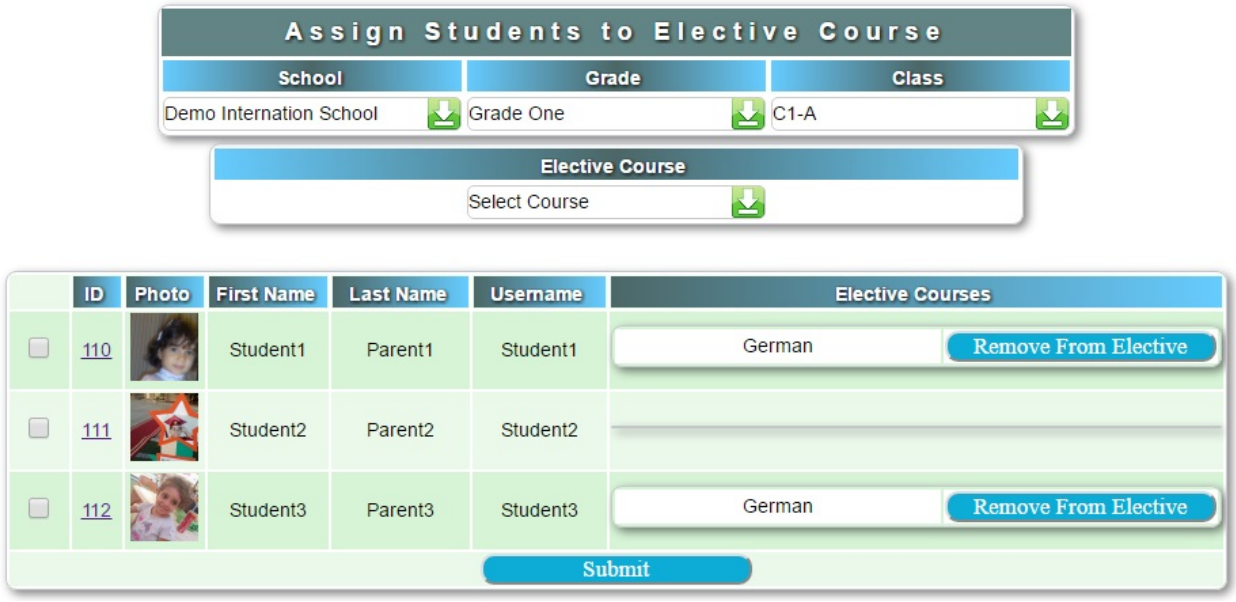


Now click on Submit button to update the session. Here is the message that the system will display:

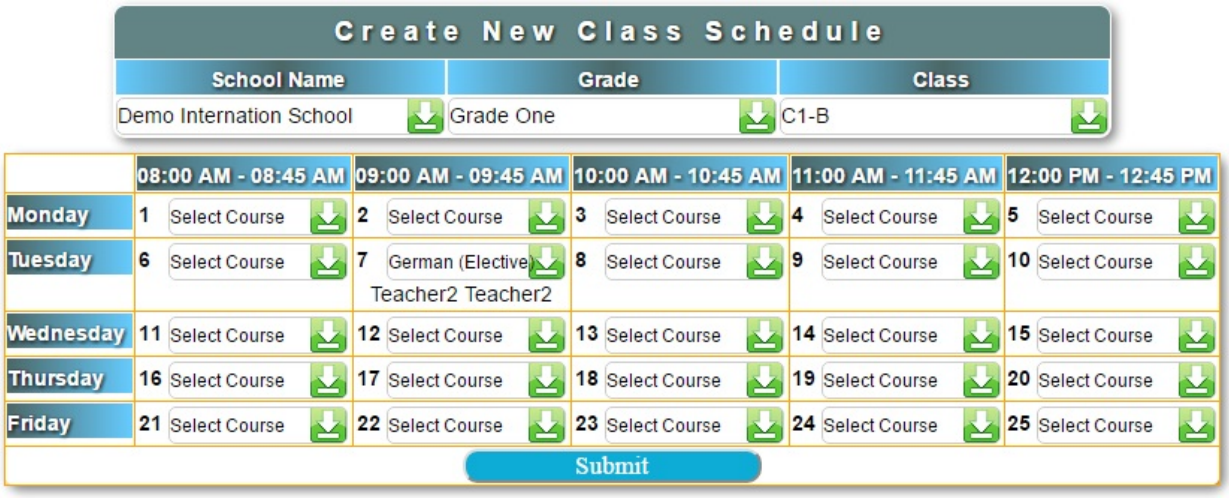


Of course, the session in conflict mentioned in the above message is session number 7 in class C1-A since Student2 and Student3 are having English course scheduled at the same time.

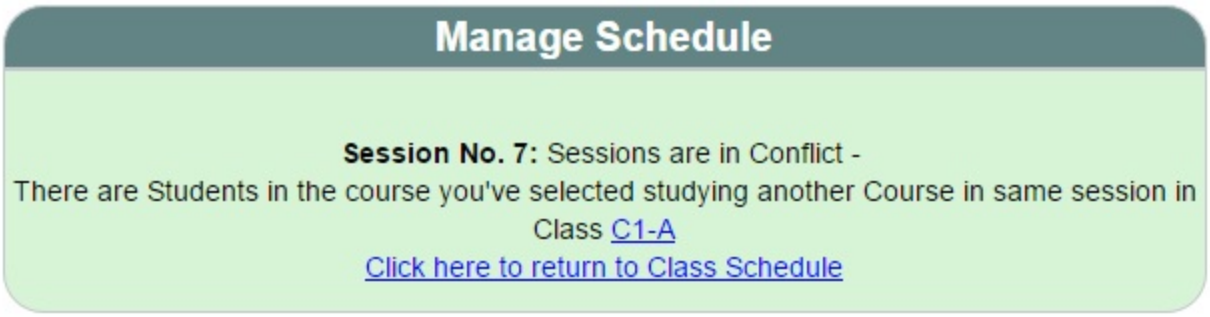
The Same scenario will also be repeated regarding students in Elective Courses. We will again remind you that Student1 and Student3 are assigned to German elective course as shown below:



Therefore, if we are trying to schedule the German course in the cell number 7 in C1-B class schedule, the student conflict will happen and will be detected by the scheduling system:



If you click Submit button, the system will respond with the following message:



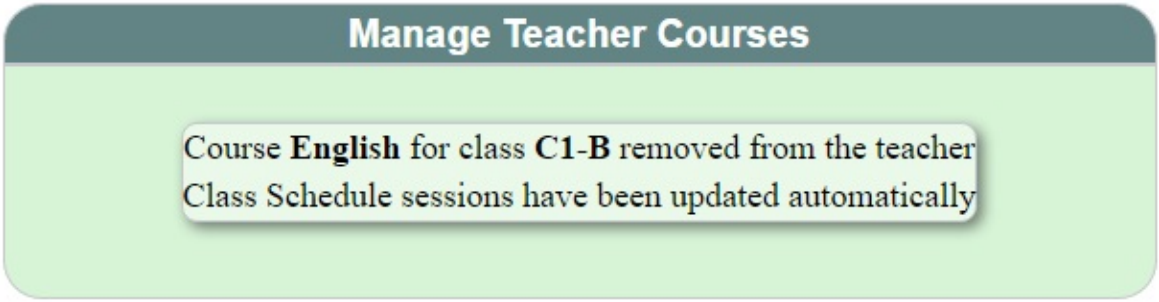
Obviously, the English course scheduled on the same time in class C1-A schedule at cell number 7 is in conflict with the session you are trying to update for German elective course since we have students in common and cannot exist in two places at the same time.

However, if you add the students to the groups or electives after the schedule has been created, the system will not prevent the conflict in order to allow flexibility to the school administration to assign the students to groups or elective courses. Nevertheless, the system will still detect any conflict and will display conflict messages in the schedule informing the school administration that the conflict has happened already in the schedule and will spot these cells that are in conflict to give the admin the chance to resolve these conflicts.

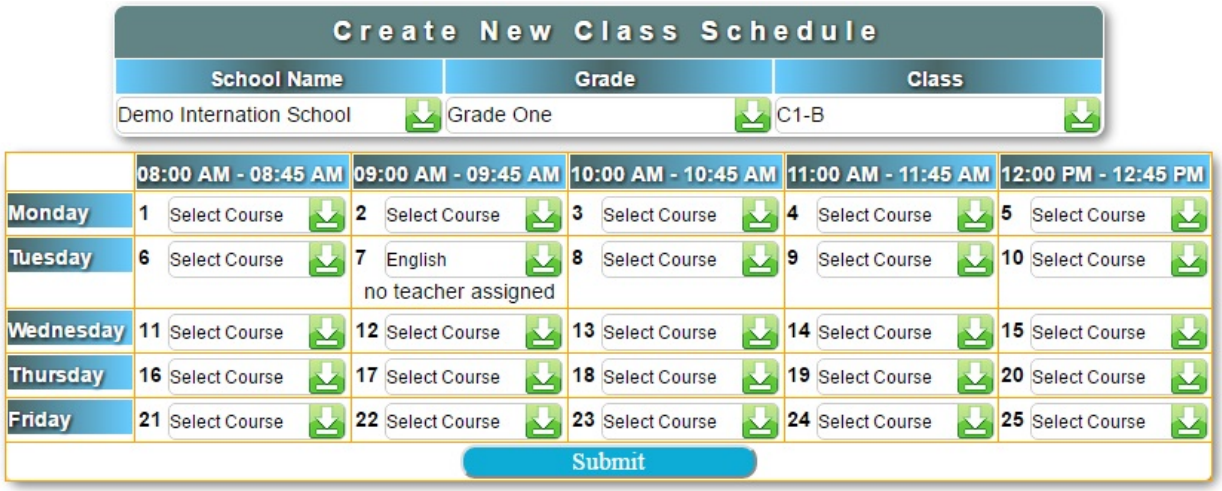
Integration with Teacher Class Authority

As discussed before, the Schedule System is well integrated with the teacher class authority system.

For example, if we remove English course under class C1-B from Teacher2 authority list, the schedule system will automatically remove the courses scheduled for this teacher from class C1-B schedule. See the message below when we removed English course from Teacher2 for class C1-B:

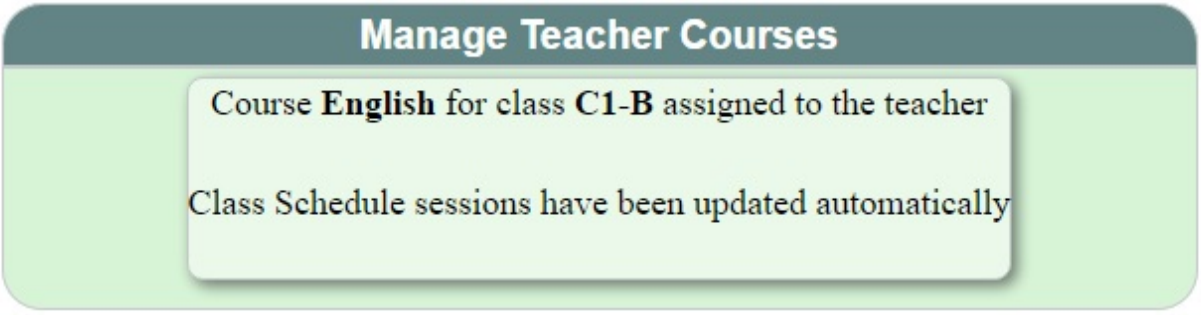


Here is the class C1-B schedule after this action:

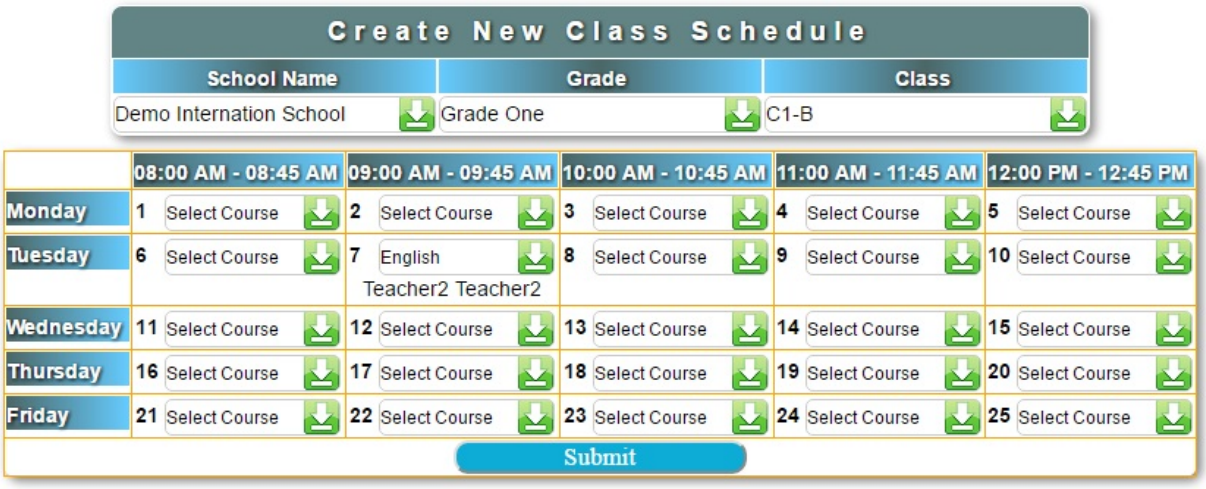


You can notice that English course now has no teacher assigned.

If we reassign the course back to the teacher, we will get the following message:

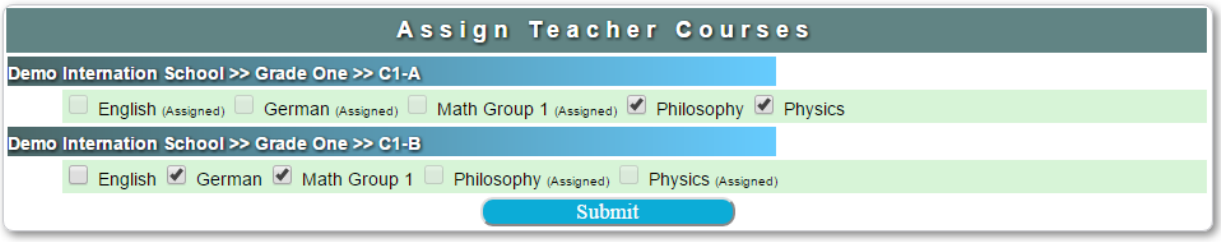


Now let's check class C1-B schedule after this action:

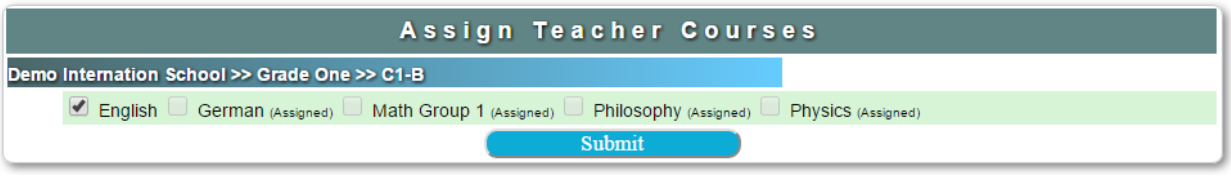


You can notice that English course has now Teacher2 back in the schedule.

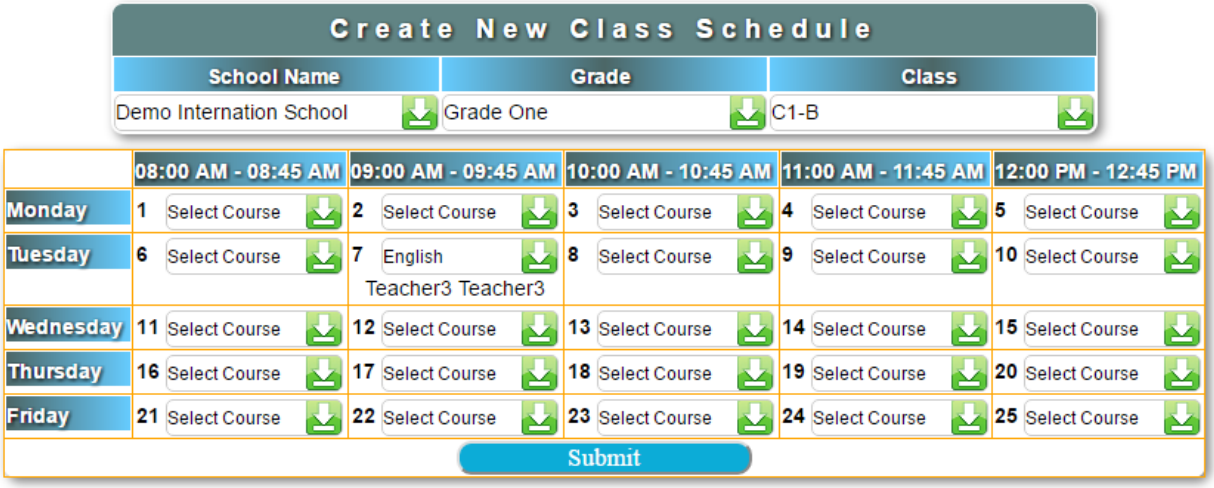
Furthermore, if we replace the authority, the schedule will replace the teachers accordingly. For example, let's remove English course for class C1-B from Teacher2:



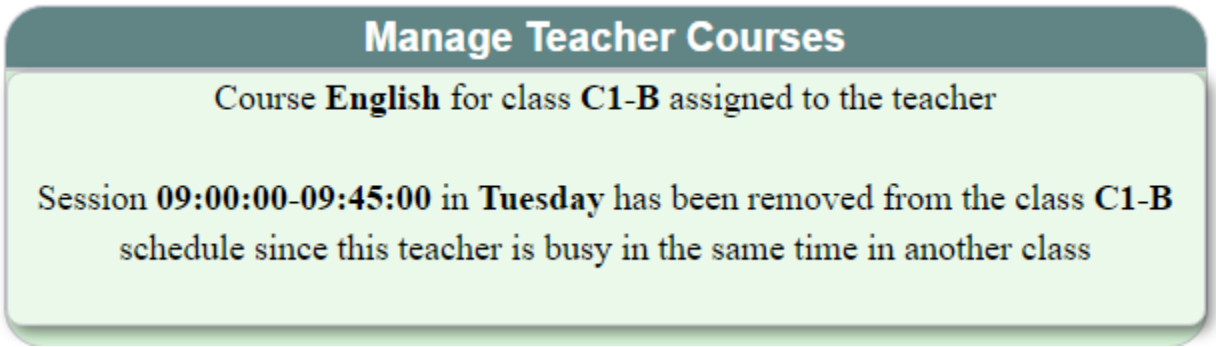
Then assign it to Teacher3:



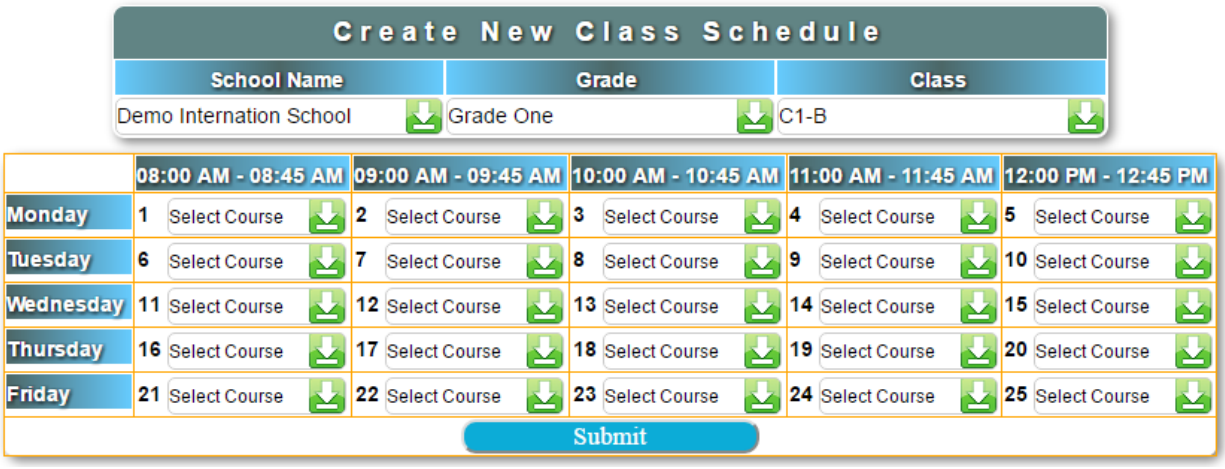
Now look at cell number 7, you will notice that Teacher3 is now the one who is displayed under the English course for the scheduled session.



However, in case you are replacing Teacher3 with another teacher who causes a conflict, the session will be removed from the schedule and the system will inform you that the session has been removed since the teacher is busy at the same time in another class. You will then need to update the session manually. For example, let's replace Teacher3 with Teacher1. When you assign Teacher1 the English course for class C1-B, here is what you get:



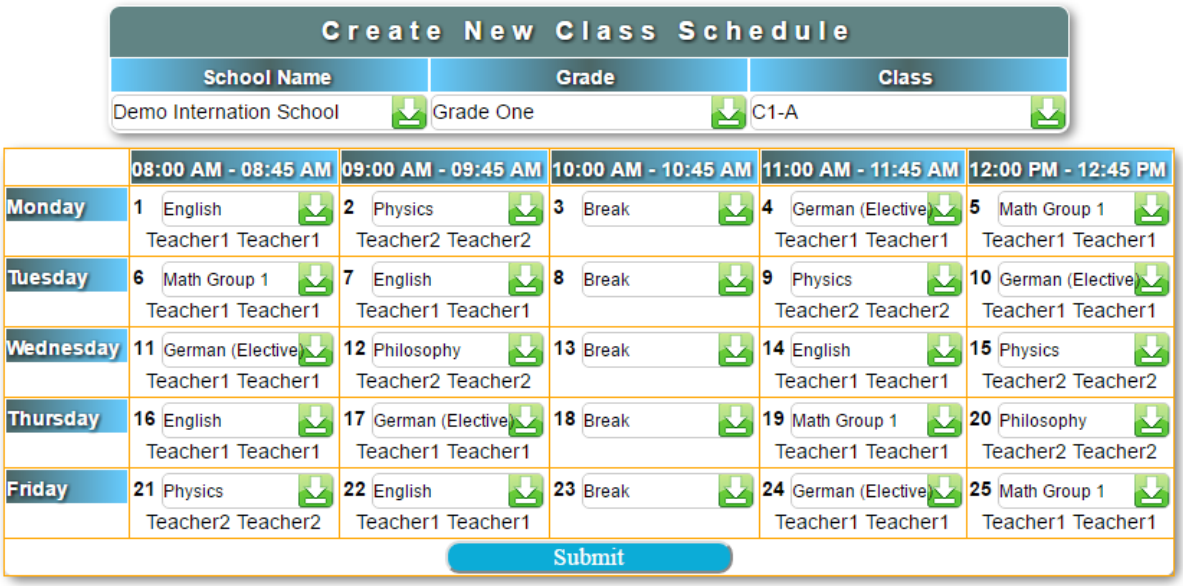
Now check the class C1-B schedule and look at cell number 7:



You can notice that the English course scheduled session has been removed and now you need to update it manually.

Schedule in the Student Portal

Now let's continue in building class C1-A schedule and then login as a student to see how it looks like from the student point of view.



Click the Submit button to create the above schedule. The system will respond with the following confirmation message:

Manage Schedule

Click here to return to Class Schedule

Let's now log in to the student portal using login information for Student1 who belongs to class C1-A.

We have logged in and accessed the schedule for that student and here is what we've got regarding her schedule

Student Schedule

	08:00 AM - 08:45 AM	09:00 AM - 09:45 AM	10:00 AM - 10:45 AM	11:00 AM - 11:45 AM	12:00 PM - 12:45 PM
Monday	Course: English Class: C1-A Teacher: Teacher1 Teacher1	Course: Physics Class: C1-A Teacher: Teacher2 Teacher2	Break	Course: German(Elective) Class: C1-A Teacher: Teacher1 Teacher1	Break
Tuesday	Break	Course: English Class: C1-A Teacher: Teacher1 Teacher1	Break	Course: Physics Class: C1-A Teacher: Teacher2 Teacher2	Course: German(Elective) Class: C1-A Teacher: Teacher1 Teacher1
Wednesday	Course: German(Elective) Class: C1-A Teacher: Teacher1 Teacher1	Course: Philosophy Class: C1-A Teacher: Teacher2 Teacher2	Break	Course: English Class: C1-A Teacher: Teacher1 Teacher1	Course: Physics Class: C1-A Teacher: Teacher2 Teacher2
Thursday	Course: English Class: C1-A Teacher: Teacher1 Teacher1	Course: German(Elective) Class: C1-A Teacher: Teacher1 Teacher1	Break	Break	Course: Philosophy Class: C1-A Teacher: Teacher2 Teacher2
Friday	Course: Physics Class: C1-A Teacher: Teacher2 Teacher2	Course: English Class: C1-A Teacher: Teacher1 Teacher1	Break	Course: German(Elective) Class: C1-A Teacher: Teacher1 Teacher1	Break

If we compare it with the schedule we have created through the admin module, you will notice that both are the same except for the session scheduled as Math Group1 as below:

	08:00 AM - 08:45 AM	09:00 AM - 09:45 AM	10:00 AM - 10:45 AM	11:00 AM - 11:45 AM	12:00 PM - 12:45 PM
Monday	1 English Teacher1 Teacher1	2 Physics Teacher2 Teacher2	3 Break	4 German (Elective) Teacher1 Teacher1	5 Math Group 1 Teacher1 Teacher1
Tuesday	6 Math Group 1 Teacher1 Teacher1	7 English Teacher1 Teacher1	8 Break	9 Physics Teacher2 Teacher2	10 German (Elective) Teacher1 Teacher1
Wednesday	11 German (Elective) Teacher1 Teacher1	12 Philosophy Teacher2 Teacher2	13 Break	14 English Teacher1 Teacher1	15 Physics Teacher2 Teacher2
Thursday	16 English Teacher1 Teacher1	17 German (Elective) Teacher1 Teacher1	18 Break	19 Math Group 1 Teacher1 Teacher1	20 Philosophy Teacher2 Teacher2
Friday	21 Physics Teacher2 Teacher2	22 English Teacher1 Teacher1	23 Break	24 German (Elective) Teacher1 Teacher1	25 Math Group 1 Teacher1 Teacher1

Submit

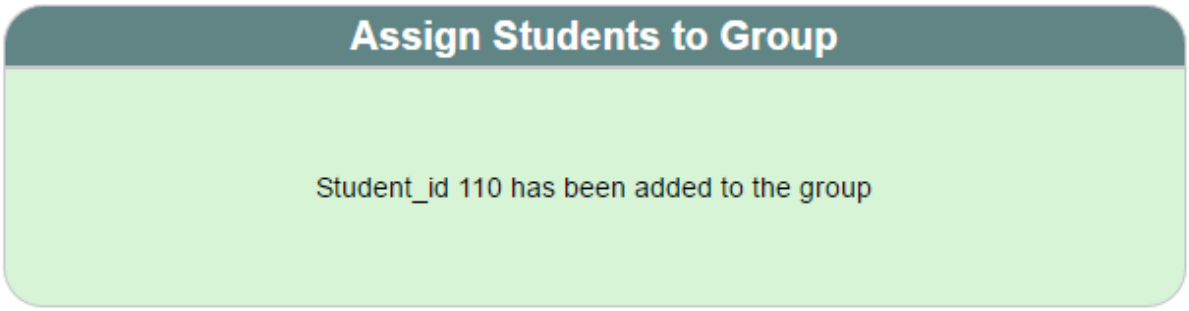
The reason for that is that Student1 is not added to Math Group 1.

Let's add Student1 into Math Group 1 as follows:

	ID	Photo	First Name	Last Name	Username	Groups
☑	110		Student1	Parent1	Student1	
☐	111		Student2	Parent2	Student2	Math-Group 1 Remove From Group
☐	112		Student3	Parent3	Student3	Math-Group 1 Remove From Group

Submit

Submit and you will get the following confirmation message:



Check the group again:

	ID	Photo	First Name	Last Name	Username	Groups
☐	110		Student1	Parent1	Student1	Math-Group 1 Remove From Group
☐	111		Student2	Parent2	Student2	Math-Group 1 Remove From Group
☐	112		Student3	Parent3	Student3	Math-Group 1 Remove From Group

Submit

Now Student1 has been successfully added to Math Group 1. Let's then check her schedule again:

Student Schedule

	08:00 AM - 08:45 AM	09:00 AM - 09:45 AM	10:00 AM - 10:45 AM	11:00 AM - 11:45 AM	12:00 PM - 12:45 PM
Monday	Course: English Class: C1-A Teacher: Teacher1 Teacher1	Course: Physics Class: C1-A Teacher: Teacher2 Teacher2	Break	Course: German(Elective) Class: C1-A Teacher: Teacher1 Teacher1	Course: Math Group 1 Class: C1-A Teacher: Teacher1 Teacher1
Tuesday	Course: Math Group 1 Class: C1-A Teacher: Teacher1 Teacher1	Course: English Class: C1-A Teacher: Teacher1 Teacher1	Break	Course: Physics Class: C1-A Teacher: Teacher2 Teacher2	Course: German(Elective) Class: C1-A Teacher: Teacher1 Teacher1
Wednesday	Course: German(Elective) Class: C1-A Teacher: Teacher1 Teacher1	Course: Philosophy Class: C1-A Teacher: Teacher2 Teacher2	Break	Course: English Class: C1-A Teacher: Teacher1 Teacher1	Course: Physics Class: C1-A Teacher: Teacher2 Teacher2
Thursday	Course: English Class: C1-A Teacher: Teacher1 Teacher1	Course: German(Elective) Class: C1-A Teacher: Teacher1 Teacher1	Break	Course: Math Group 1 Class: C1-A Teacher: Teacher1 Teacher1	Course: Philosophy Class: C1-A Teacher: Teacher2 Teacher2
Friday	Course: Physics Class: C1-A Teacher: Teacher2 Teacher2	Course: English Class: C1-A Teacher: Teacher1 Teacher1	Break	Course: German(Elective) Class: C1-A Teacher: Teacher1 Teacher1	Course: Math Group 1 Class: C1-A Teacher: Teacher1 Teacher1

Compare it with the created schedule by the admin:

	08:00 AM - 08:45 AM	09:00 AM - 09:45 AM	10:00 AM - 10:45 AM	11:00 AM - 11:45 AM	12:00 PM - 12:45 PM
Monday	1 English Teacher1 Teacher1	2 Physics Teacher2 Teacher2	3 Break	4 German (Elective) Teacher1 Teacher1	5 Math Group 1 Teacher1 Teacher1
Tuesday	6 Math Group 1 Teacher1 Teacher1	7 English Teacher1 Teacher1	8 Break	9 Physics Teacher2 Teacher2	10 German (Elective) Teacher1 Teacher1
Wednesday	11 German (Elective) Teacher1 Teacher1	12 Philosophy Teacher2 Teacher2	13 Break	14 English Teacher1 Teacher1	15 Physics Teacher2 Teacher2
Thursday	16 English Teacher1 Teacher1	17 German (Elective) Teacher1 Teacher1	18 Break	19 Math Group 1 Teacher1 Teacher1	20 Philosophy Teacher2 Teacher2
Friday	21 Physics Teacher2 Teacher2	22 English Teacher1 Teacher1	23 Break	24 German (Elective) Teacher1 Teacher1	25 Math Group 1 Teacher1 Teacher1

Submit

You will now notice that both schedules screens are identical in terms of the scheduled sessions.

Schedule in the Teacher Module

Now let's login to teacher module using the login information of Teacher1 and see how the schedule will look like from the teacher point of view:

Teacher Schedule

	08:00 AM–08:45 AM	09:00 AM–09:45 AM	11:00 AM–11:45 AM	12:00 PM–12:45 PM
Monday	Demo Internation School Grade One C1-A English		Demo Internation School Grade One C1-A German	Demo Internation School Grade One C1-A Math Group 1
Tuesday	Demo Internation School Grade One C1-A Math Group 1	Demo Internation School Grade One C1-A English		Demo Internation School Grade One C1-A German
Wednesday	Demo Internation School Grade One C1-A German		Demo Internation School Grade One C1-A English	
Thursday	Demo Internation School Grade One C1-A English	Demo Internation School Grade One C1-A German	Demo Internation School Grade One C1-A Math Group 1	
Friday		Demo Internation School Grade One C1-A English	Demo Internation School Grade One C1-A German	Demo Internation School Grade One C1-A Math Group 1

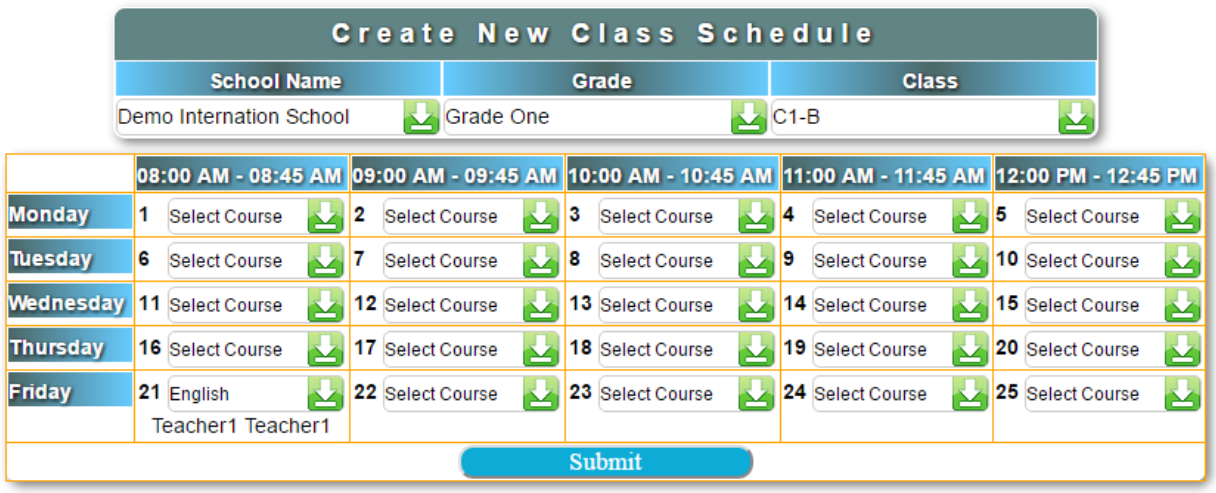
Now compare it to the schedule that the admin has created for class C1-A

	08:00 AM - 08:45 AM	09:00 AM - 09:45 AM	10:00 AM - 10:45 AM	11:00 AM - 11:45 AM	12:00 PM - 12:45 PM
Monday	1 English Teacher1 Teacher1	2 Physics Teacher2 Teacher2	3 Break	4 German (Elective) Teacher1 Teacher1	5 Math Group 1 Teacher1 Teacher1
Tuesday	6 Math Group 1 Teacher1 Teacher1	7 English Teacher1 Teacher1	8 Break	9 Physics Teacher2 Teacher2	10 German (Elective) Teacher1 Teacher1
Wednesday	11 German (Elective) Teacher1 Teacher1	12 Philosophy Teacher2 Teacher2	13 Break	14 English Teacher1 Teacher1	15 Physics Teacher2 Teacher2
Thursday	16 English Teacher1 Teacher1	17 German (Elective) Teacher1 Teacher1	18 Break	19 Math Group 1 Teacher1 Teacher1	20 Philosophy Teacher2 Teacher2
Friday	21 Physics Teacher2 Teacher2	22 English Teacher1 Teacher1	23 Break	24 German (Elective) Teacher1 Teacher1	25 Math Group 1 Teacher1 Teacher1

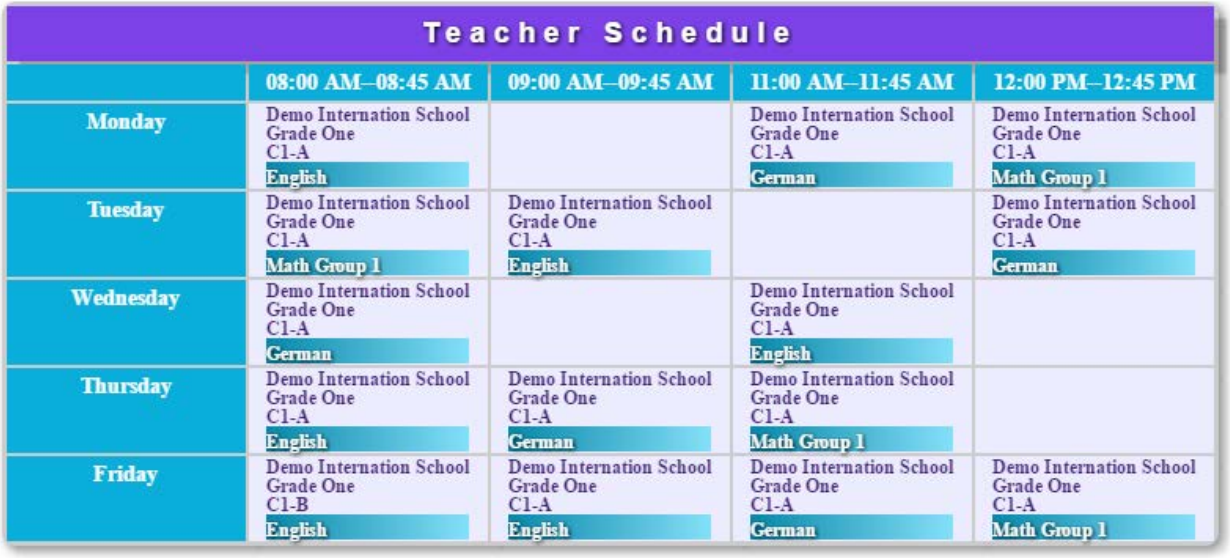
Submit

You can notice that all sessions that have Teacher1 assigned are being displayed in the teacher schedule.

If we schedule a session for the same teacher in class C1-B schedule, let say cell number 21 as below:



Now check the teacher schedule again to see the changes:



As you can notice, on Friday from 8:00 AM to 8:45 AM the session, which was empty before, now filled with English course for C1-B class as scheduled by the admin.

Subscription

When you create the account to use the system, we give you 14-day trial period to have the chance to fully test our system and to get hands-on experience with all the features the system is providing.

During the trial period, we don't force any restrictions on any features. All features are available until the trial period expires. You can create up to 50 student profiles during the trial period.

After the trial period expires you will need to subscribe for the service in order to continue using the system. The subscription is only payment for a number of students' licenses. No licenses are required for admin or teachers. Once you subscribe, there is no limitations on the number of schools or teachers you create in the system.

The subscription module provides you with the ability to subscribe and pay the subscription fees online through PayPal; the world number one online payment gateway.

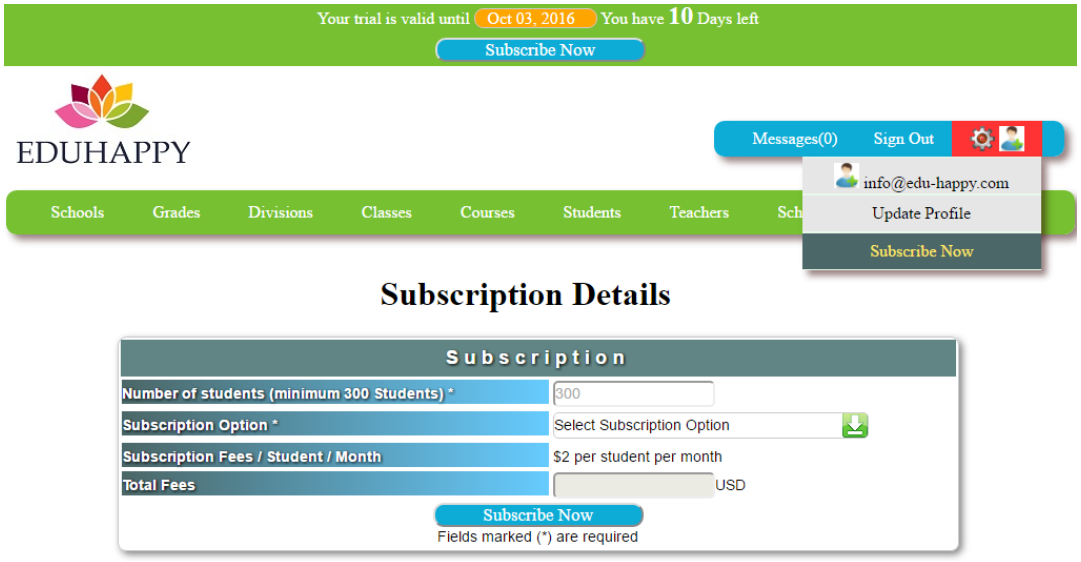
We don't get any payment information through our system. We don't ask for any credit card information to subscribe you for the service. Instead, we redirect you to PayPal and the payment will be done there. All your credit card information are being requested and processed by PayPal which provides you with high security for your payment information.

If you have PayPal account then all you need is to login to your account and pay online then PayPal will redirect you back to our website. If you don't have PayPal account, don't worry, the process is simple, just create a new account in PayPal which takes a couple of minutes then login with your account to complete the payment process.

New Subscription

To subscribe, click on Subscribe Now button at the top of any page:

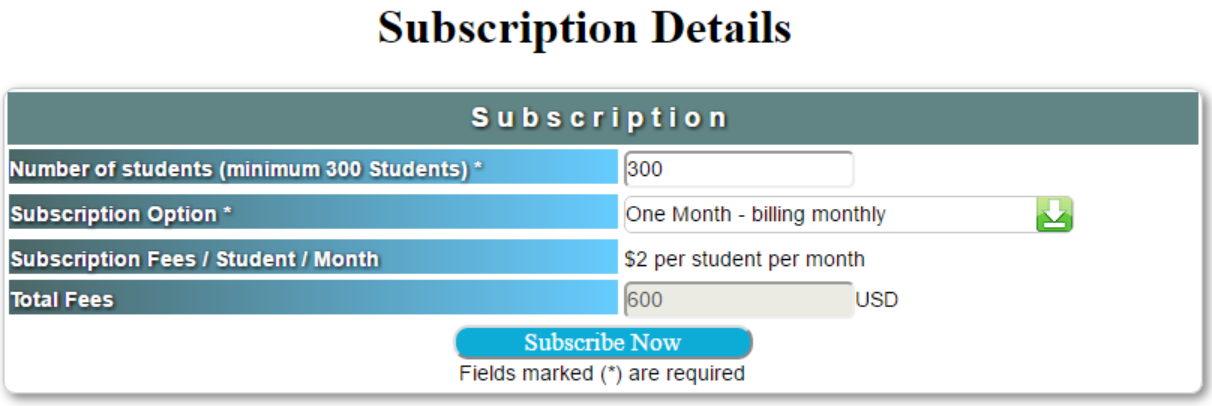
You can also go to your account setting and choose Subscribe Now from the menu as shown below:



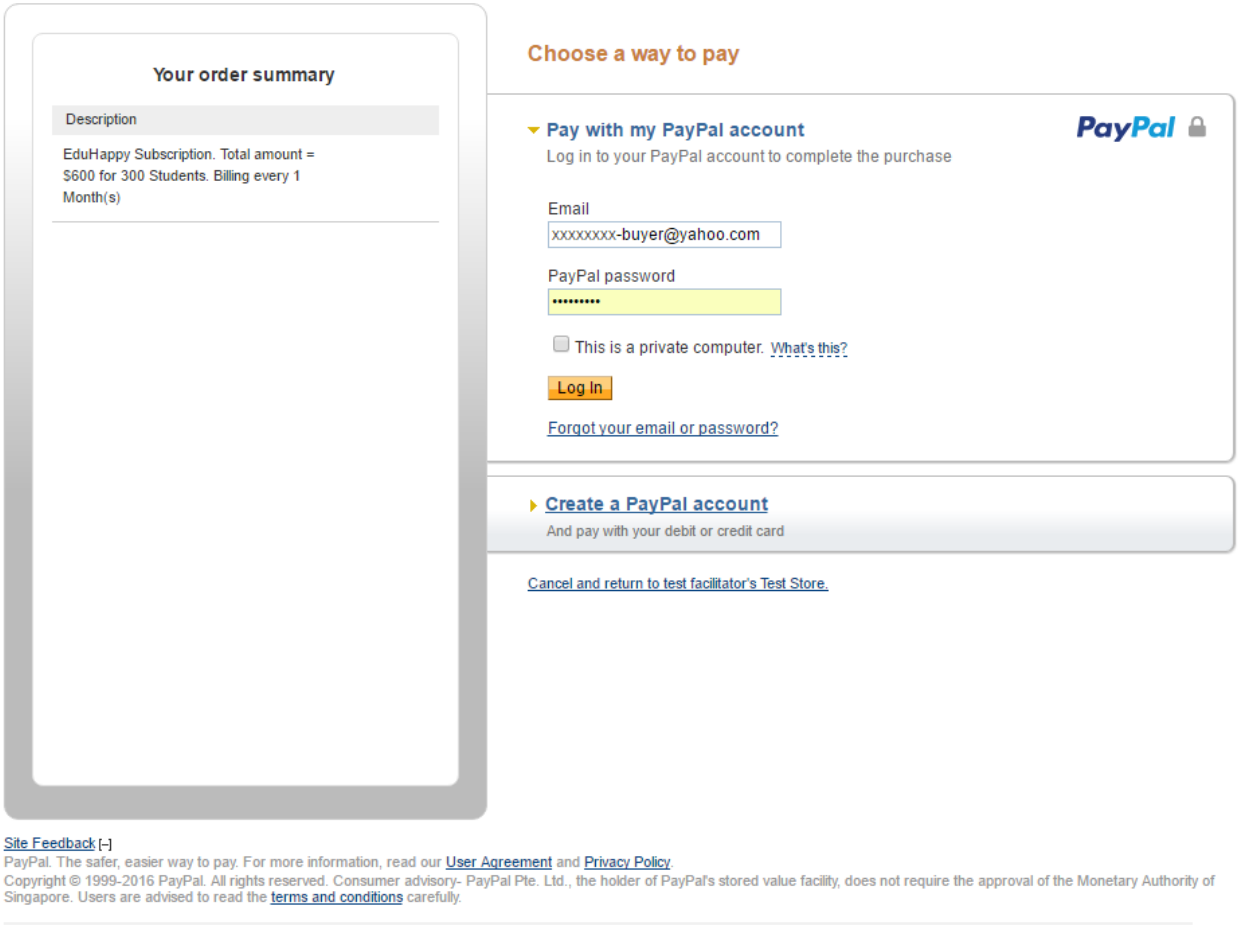
The Subscription form will be displayed and you will need to enter the number of students you need to subscribe for. The minimum is 300 students.

You need then to select the subscription option which is actually the billing cycle. You have four options; monthly (billing every month), quarterly (billing every three months), semiannual (billing every six months), and annual (billing every year).

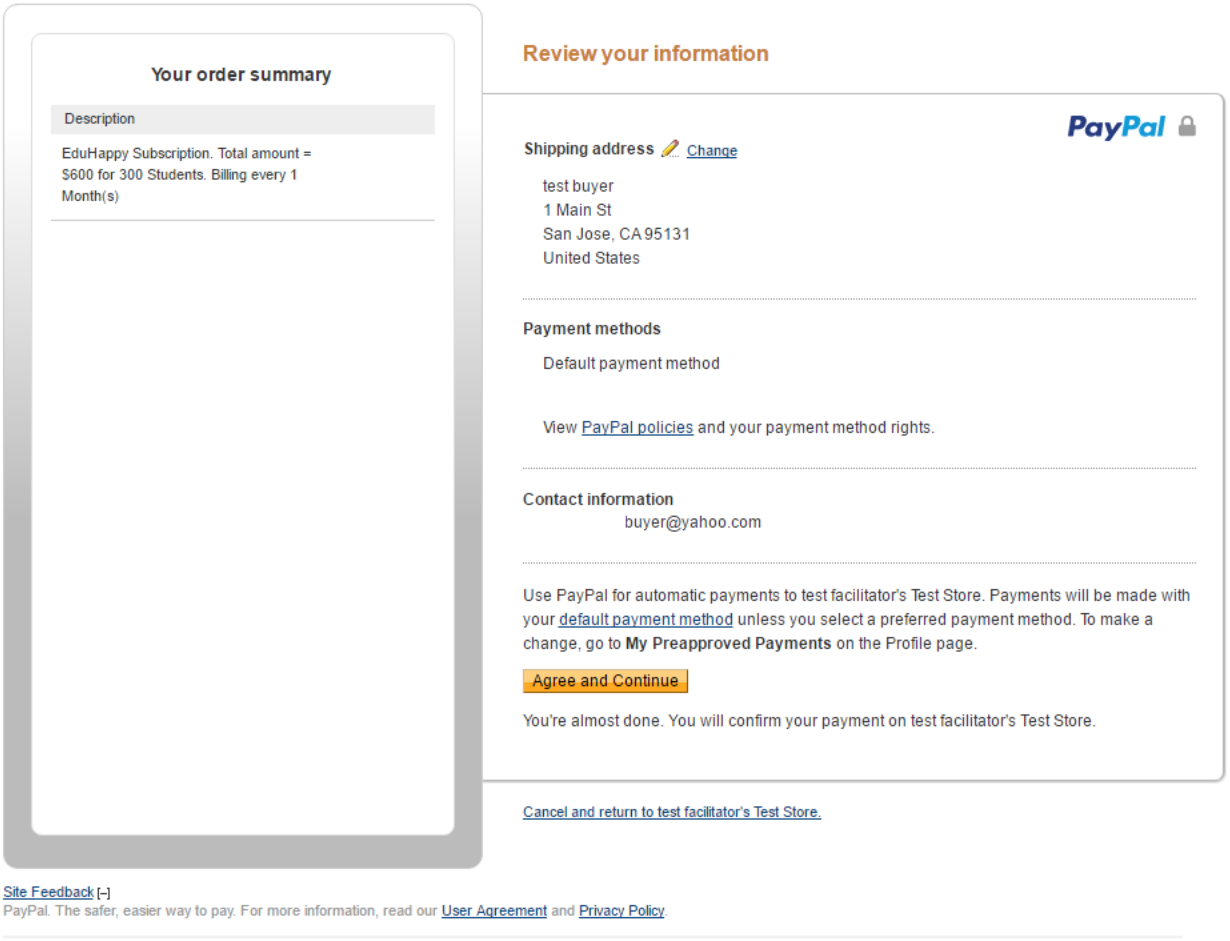
Once you enter the number of students and choose the subscription option the system will automatically calculate the total fees and display it in the Total Fees field which is non-editable.



When you finish click on Subscribe Now button. The system will redirect you to PayPal website to proceed with the payment.

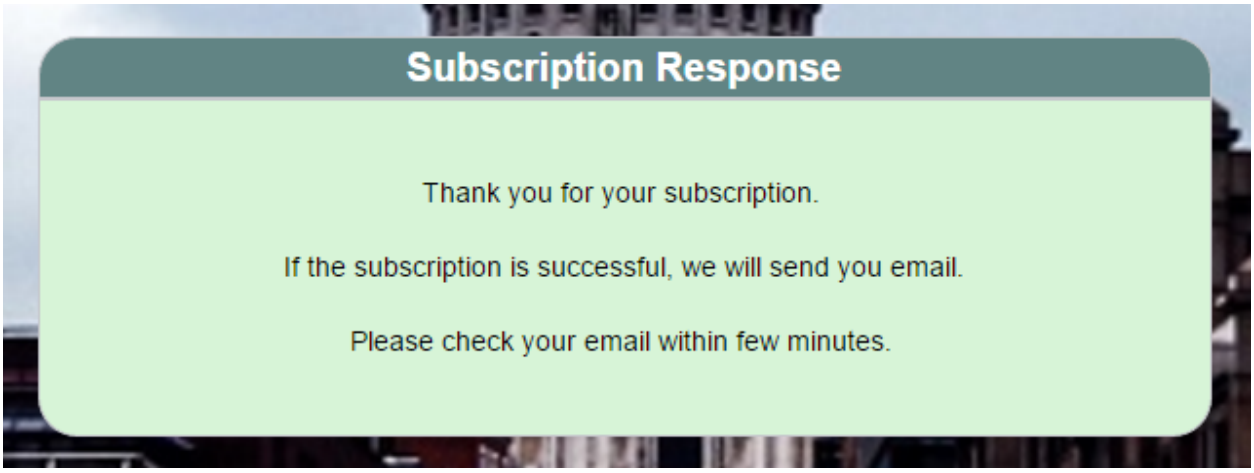


Login with your PayPal account login information and you will get the following:



Click on Agree and Continue to finish the payment process and return back to EduHappy.

You will finally receive the following message:



Check your email in a moment and you should receive the following confirmation email:

Thank you for your EduHappy Subscription.

You have full access to your account until 2016-10-23 and your subscription will be automatically renewed on 03:00:00 Oct 23, 2016 PDT.

If at anytime you need to cancel your subscription, please go to your Profile Settings and click on Cancel Subscription.

Should you need to updated subscription to change the billing cycle or to purchase more students licenses, please go to your Profile Settings and click on Update Subscription. You will have the option to add more students with no minimum or maximum limits restriction. You will also be able to upgrade the billing cycle as needed. However, you will not be able to downgrade the billing cycle option.

To check the Licenses Information and know all the details about the students licenses, please go to your Profile Settings and click on Licenses Information.

If you need any help, please contact us at info@eduhappy.com.

Best of Luck,

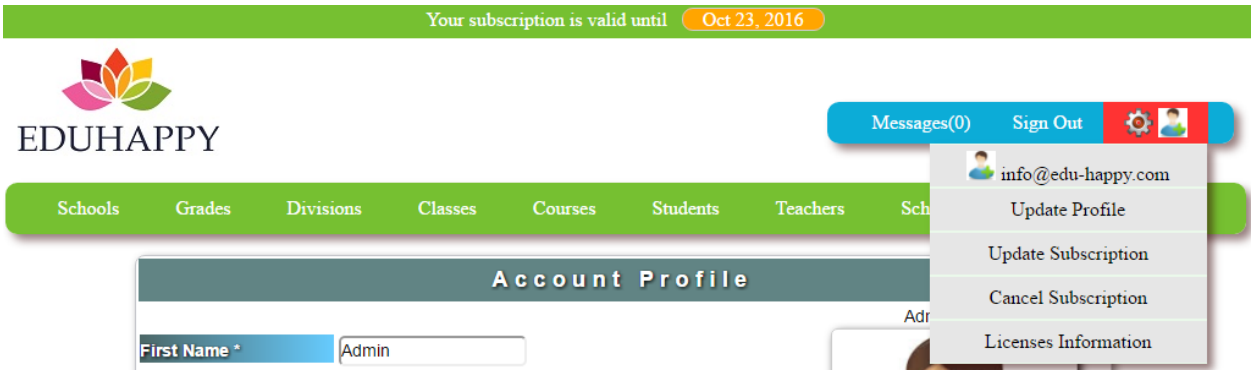
EduHappy Team

http://www.edu-happy.com

Email: info@edu-happy.com

Now you can login to your account and look at the header of any page. You should now notice the changes as shown below:

You need also to notice the changes in the menu when you go to your account settings as below:



You have now more options in the menu as you can see. You have “Update Subscription” option instead of “Subscribe Now”. You also have “Cancel Subscription” and “Licenses Information” options.

Let’s check the Update Subscription option.

Update Subscription

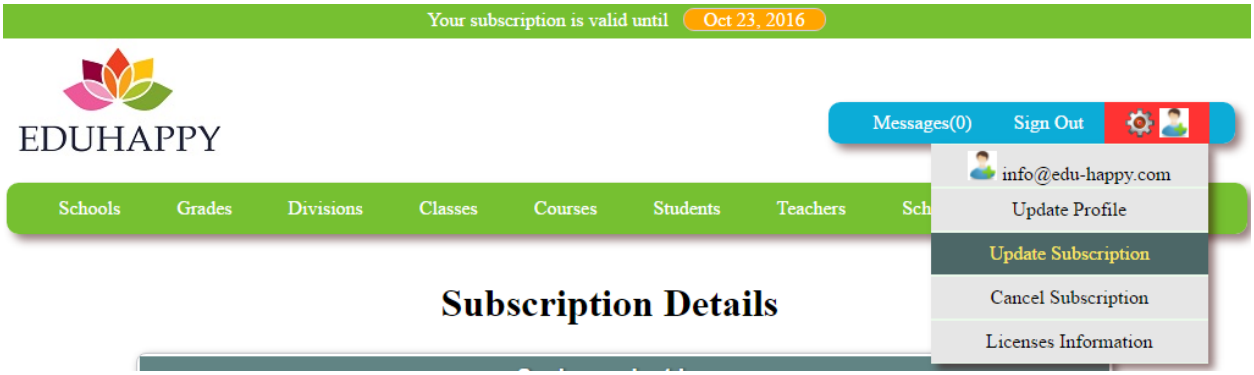
After you have subscribed to EduHappy services you might want to change the subscription details.

You might want to increase the number of students' licenses or change the billing cycle.

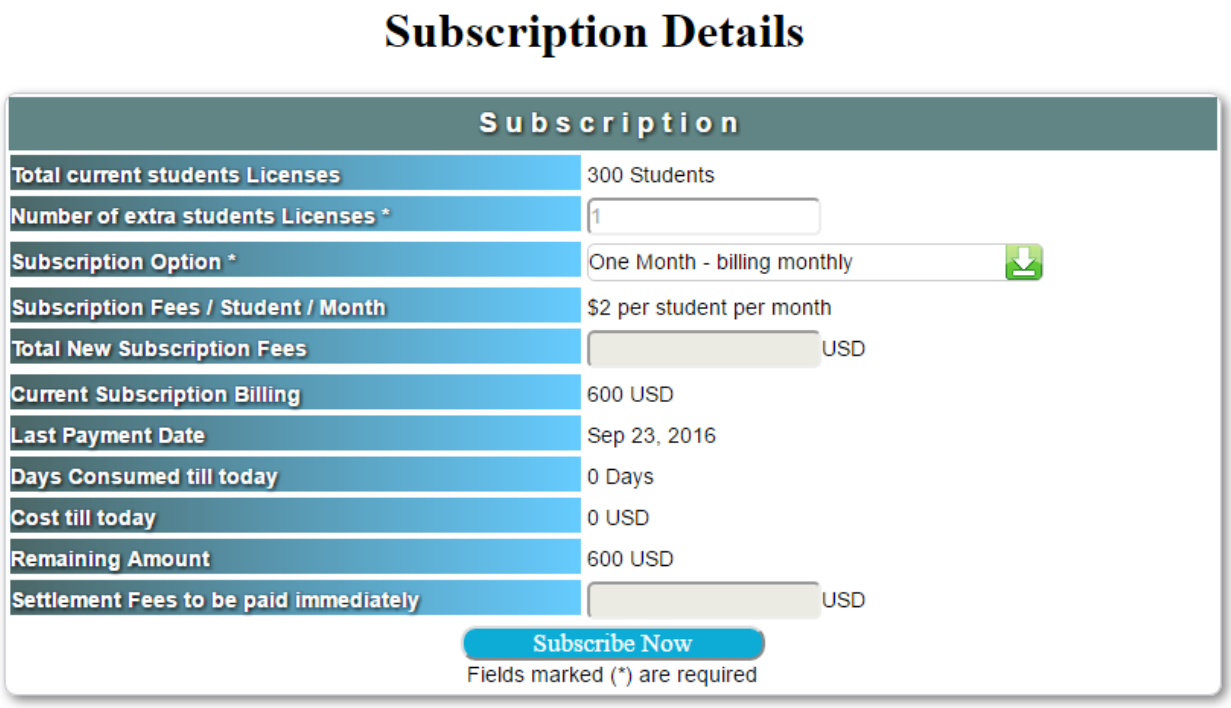
We don't restrict the number of students you need to add. There is no package upgrade. If you would like to add even one student you will be able to do so. The only restriction is that you can't downgrade, i.e., you can't reduce the number of students you have originally subscribed for.

You will also be able to upgrade the billing cycle option but you will not be able to downgrade. So for instance, if you have subscribed based on three-month billing cycle option, you can change it to annual but you cannot change it to monthly billing cycle option.

In order to update subscription, go to your account setting and choose Update Subscription from the menu as follows:



You will get the Subscription Details form but this time, it is different as shown below:



All what you need to do is to enter the number of extra students licenses and select the subscription billing option. When you do so, the system will automatically calculate the new subscription fees.

Based on the above, the system will then make some more calculations to come up with the settlement fees you need to pay in order to start the new subscription agreement which will start from the date you have updated the subscription and change the next billing date accordingly.

The settlement fees calculations are based on the consumption you have made from the old subscription agreement and the remaining amount will be deducted from the new subscription agreement fees. The difference will be the settlement fees you need to pay initially in order to start the new subscription agreement and then you will pay normal subscription fees on each billing cycle.

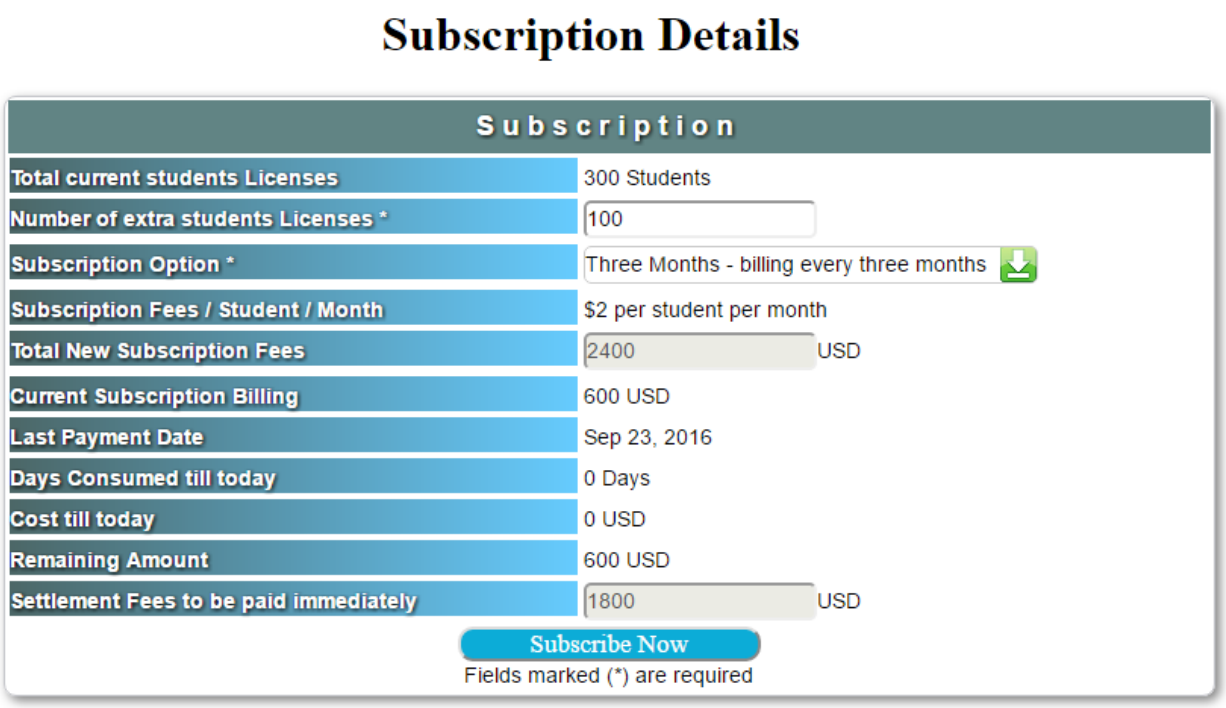
Example:

Let's assume you have subscribed for three months billing cycle and billing fees was $3000. If you passed one month and then decided to update the subscription, then you have consumed one month of the old agreement subscription for which the cost is $1000. That mean we owe

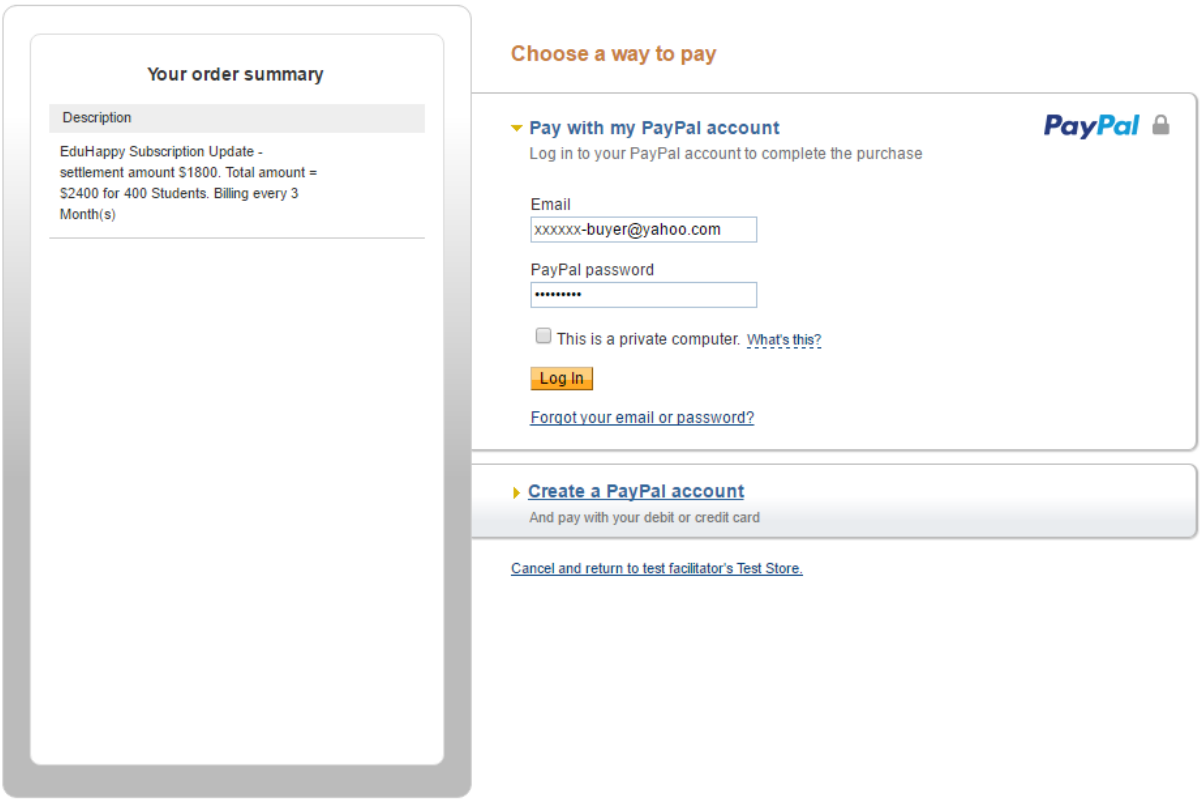
you $2000. Now you decided to increase the number of students and change the billing to semiannual and the new billing became let say $6000. The settlement, in this case, is the difference which is ($6000-$2000=$4000). This is the amount you need to pay immediately in order to start the new subscription agreement. In this case, the renewal date will be changed. Instead of renewal after two months as per the old agreement, the renewal now will be after 6 months.

The settlement concept is provided by the system in order to give you the flexibility to start the new subscription agreement immediately instead of waiting to the next billing cycle date to update the subscription. So once you need to have for example a 100 extra students' licenses now you get them now. No need for waiting.

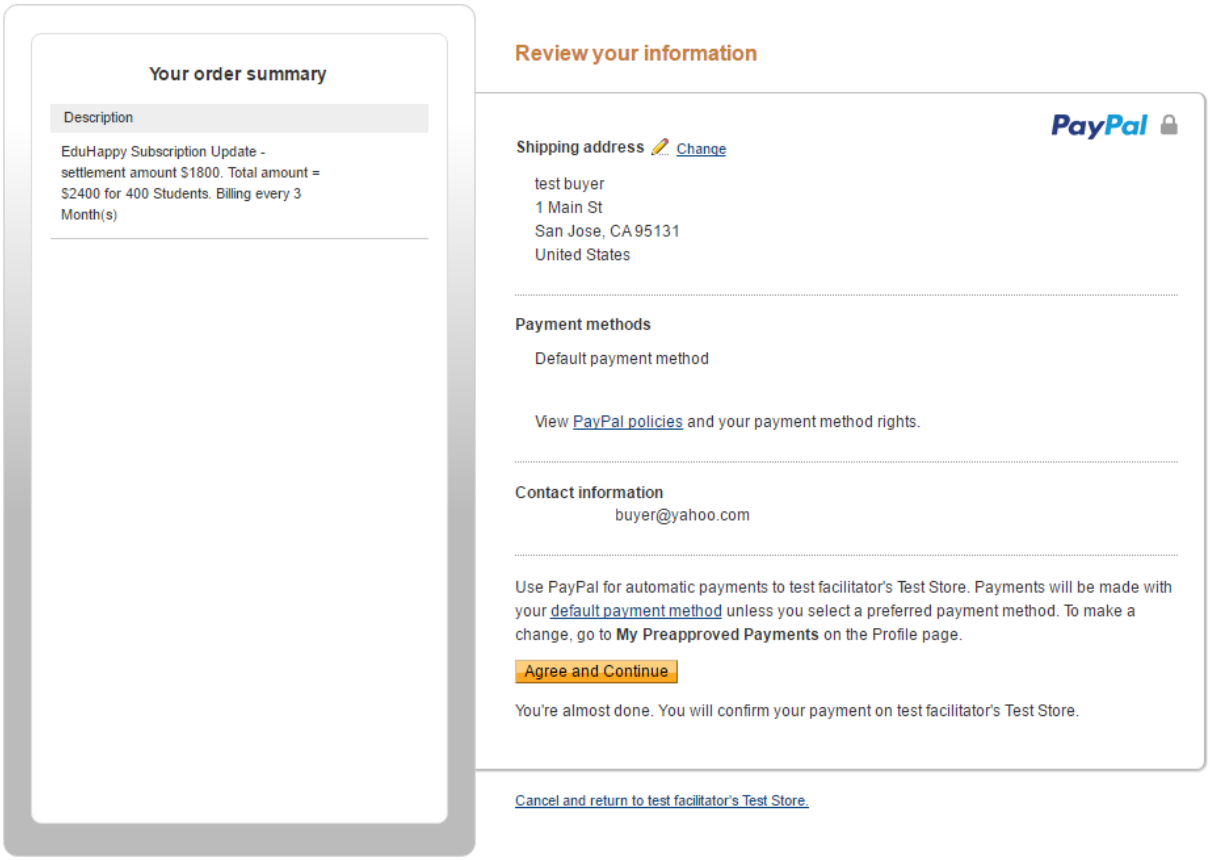
So let's now fill the subscription form to update the subscription as follows:



Once finished updating the subscription, click on Subscribe Now button. The system will redirect you to PayPal to complete the payment process and start the new subscription agreement:



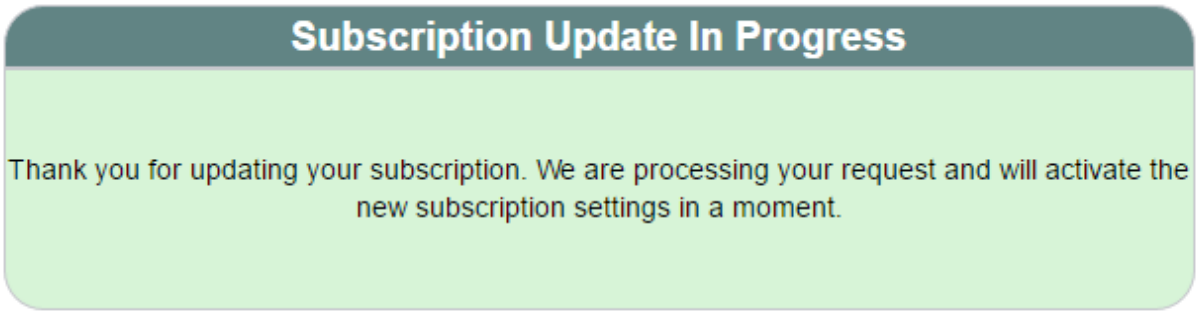
Login with your PayPal account login information and you will get the following:



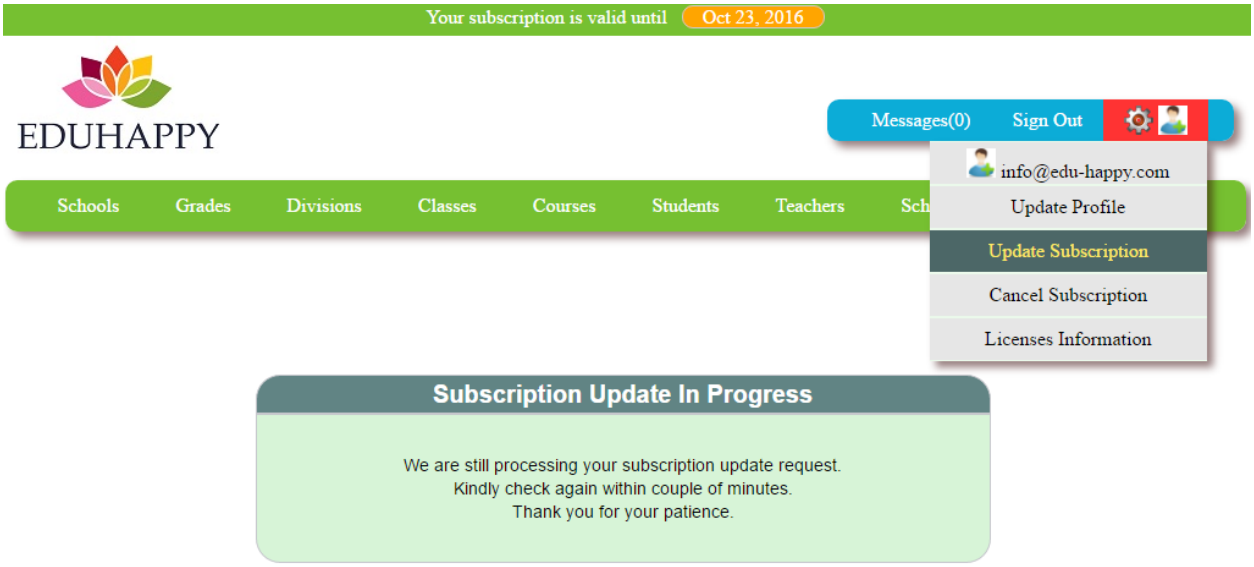
You can notice under the Description that the settlement amount has been mentioned to inform you with the amount that you need to pay right away.

Click on Agree and Continue to finish the payment process and return back to EduHappy.

You will finally receive the following message:



During the activation process, you will not be allowed to update the subscription again. If you go to account settings and choose Update Subscription, you will receive a message informing you that we are still processing the subscription update request and that you need to check gain within couple of minutes as shown in the below screen:



Once the subscription update successfully processed, you will receive an email to confirm the success of the update and to inform you with the new renewal date as shown in the screen below:

Thank you for your EduHappy Subscription.

You have full access to your account until 2016-12-23 and your subscription will be automatically renewed on 02:00:00 Dec 23, 2016 PST.

If at anytime you need to cancel your subscription, please go to your Profile Settings and click on Cancel Subscription.

Should you need to updated subscription to change the billing cycle or to purchase more students licenses, please go to your Profile Settings and click on Update Subscription. You will have the option to add more students with no minimum or maximum limits restriction. You will also be able to upgrade the billing cycle as needed. However, you will not be able to downgrade the billing cycle option.

To check the Licenses Information and know all the details about the students licenses, please go to your Profile Settings and click on Licenses Information.

If you need any help, please contact us at info@eduhappy.com.

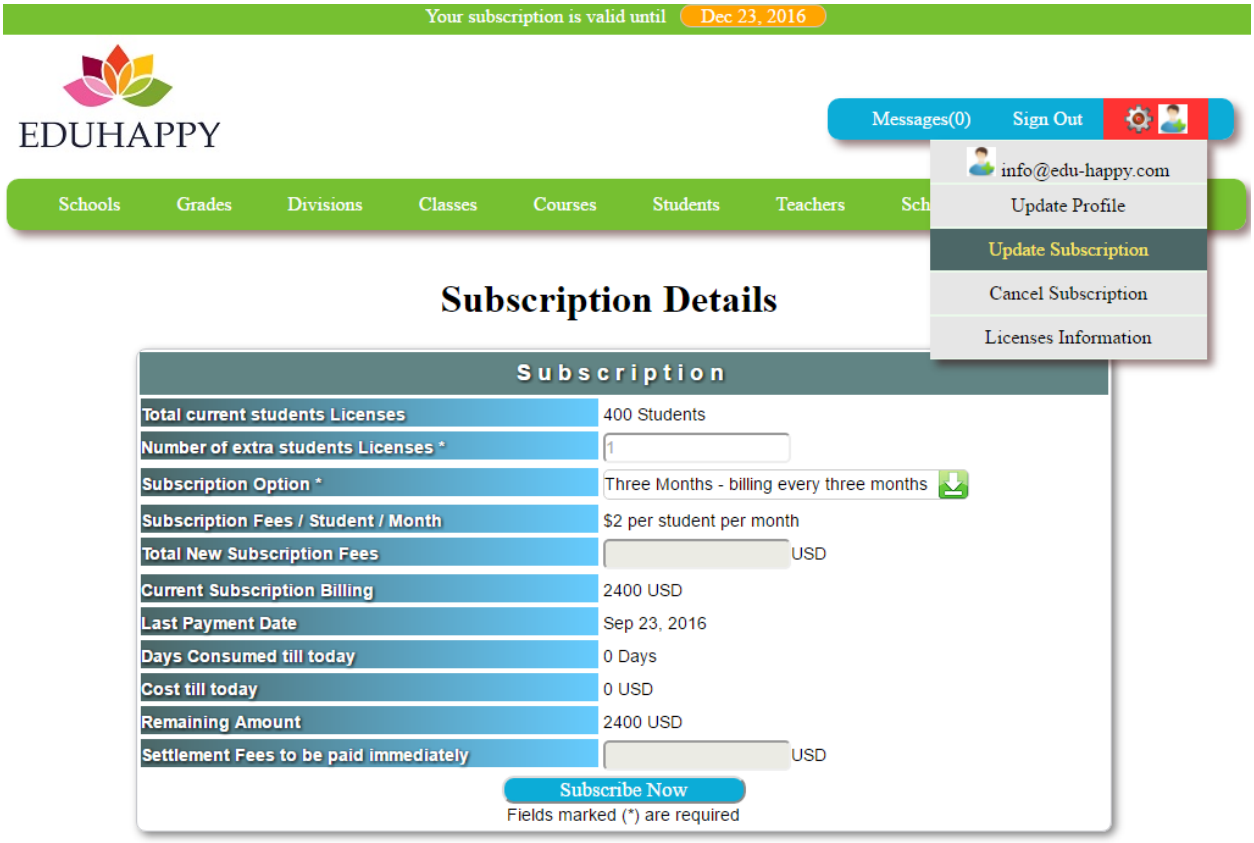
Best of Luck,

EduHappy Team

http://www.edu-happy.com

Email: info@edu-happy.com

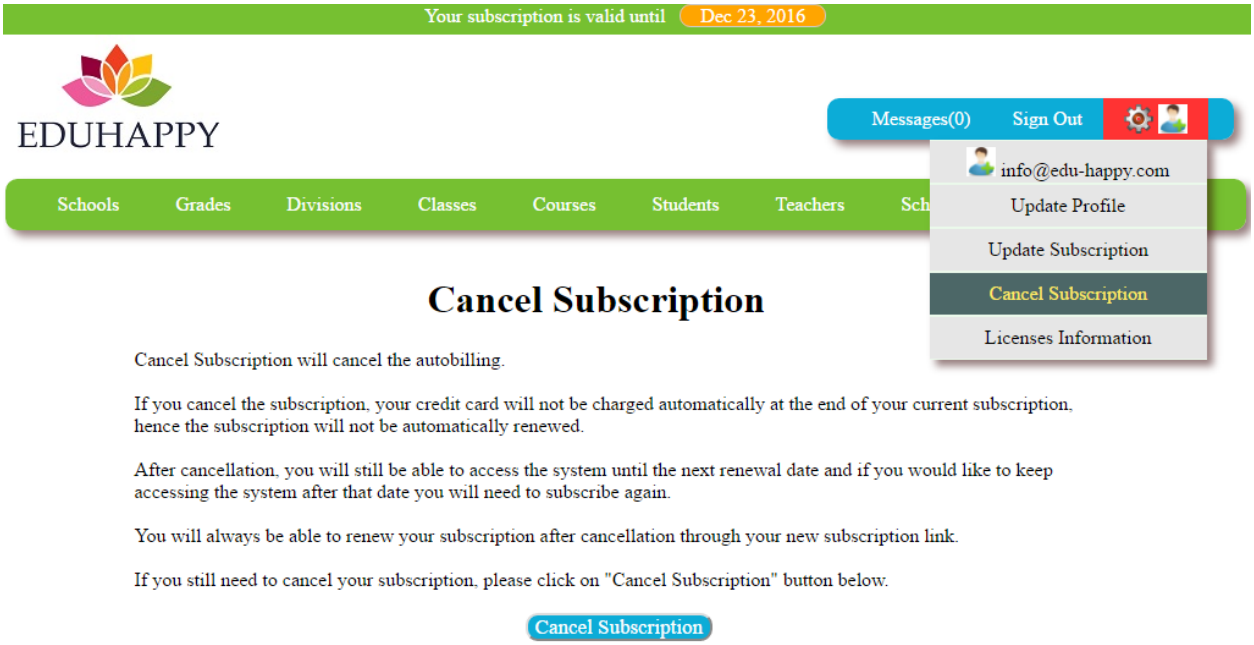
Now you will be allowed to update the subscription again. Go to your account settings and choose Update Subscription and you will get the subscription form allowing you to change your subscription settings as needed. This is shown in the below screen:



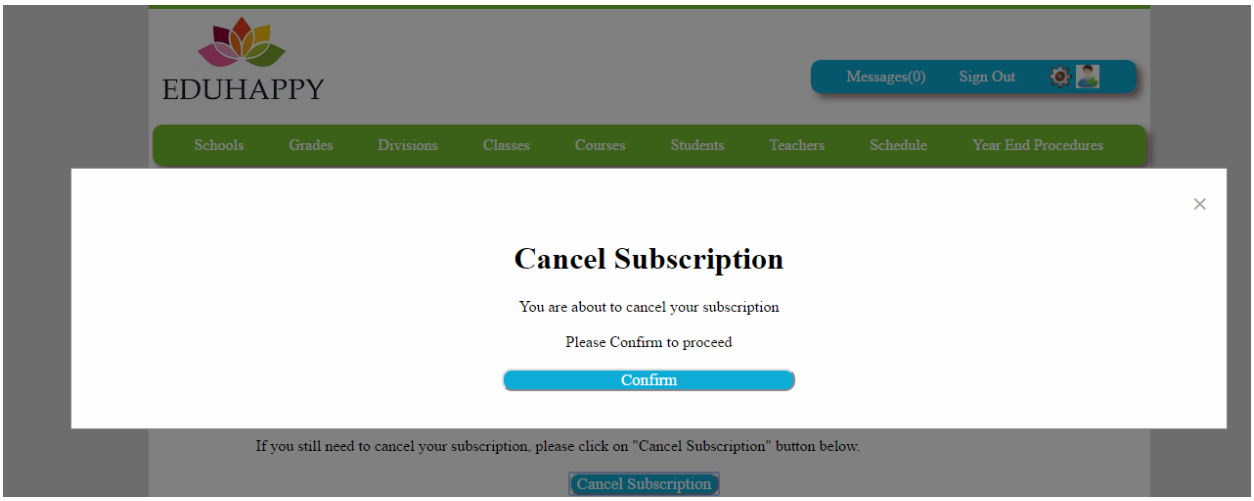
Cancel Subscription

You can cancel your subscription anytime. Of course, we will not be happy if you do but we have to respect your desires.

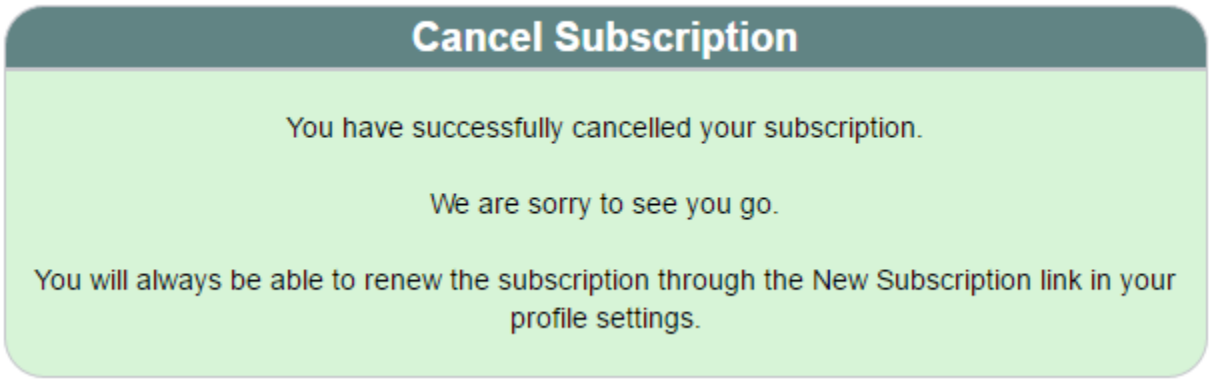
If you need to cancel your subscription, please go to your account settings and choose Cancel Subscription from the menu as follows:



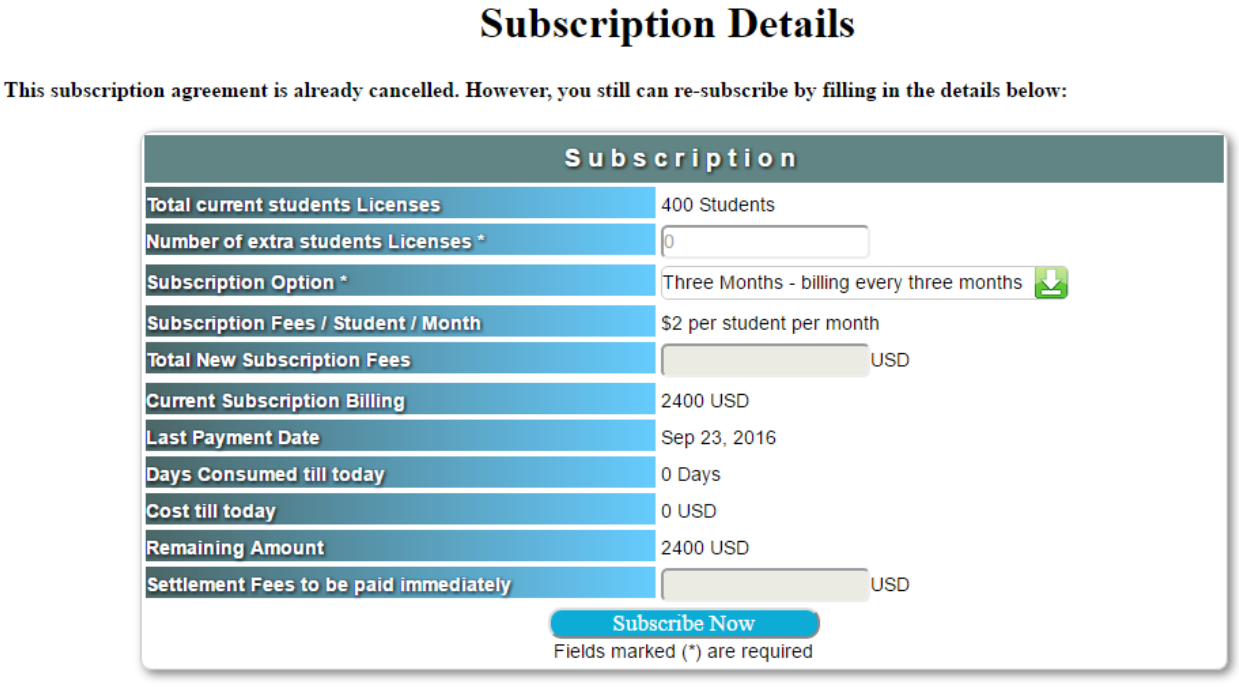
If you click on Cancel Subscription button, you will get a confirmation dialog box asking you to confirm your action as below:



If you click on Confirm button, the subscription will be canceled and you will receive the following confirmation message:



However, and although the subscription is now canceled, you will still be eligible to use the service until the next renewal date. After that date, you won't be able to access the system anymore. But even though, you can re-subscribe anytime whether before or after this date. If you need to subscribe again after you have canceled the subscription, please go to your account settings and choose Update Subscription. You will get the below form:

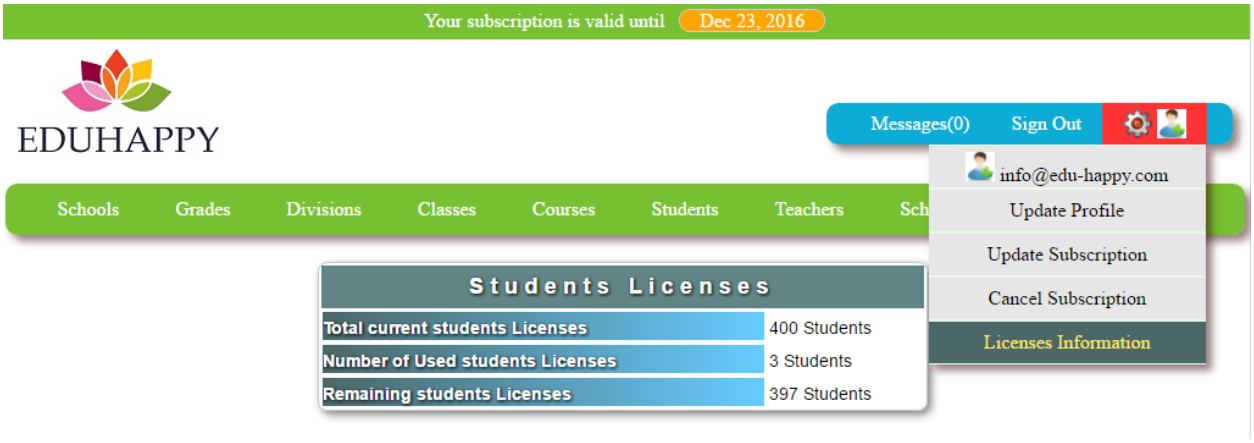


You can now subscribe again. Just enter the number of extra students licenses field which in this case can be 0 and the system will calculate the settlement as if you were updating the

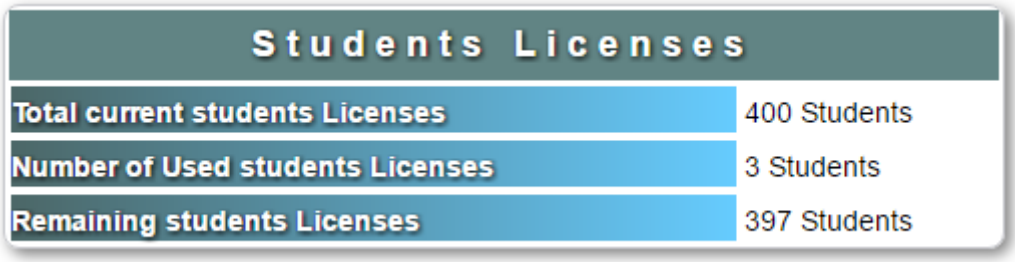
subscription. Click Subscribe Now button to complete the payment process and activate the new subscription agreement.

Licenses Information

If you need to know the details about the licenses information, go to your account settings and choose Licenses Information from the menu as follows:



You will get the details about the licenses; how many students licenses you have already subscribed for, how many numbers of licenses you have already used (this is actually the number of created students profiles) and how many licenses remaining which are actually the difference between the licenses you subscribed for and the used licenses. This is shown in the below screen:



Teacher Guide

Introduction

Teacher module is designed especially for the teachers to provide them with all the necessary tools to help them automate the day to day operations with respect to the education process. These tools include creating and uploading content, taking attendance, creating assignments, giving assignments, grading assignments, grading semester exams, checking the schedule, communicating with students and admins through messages and retrieving reports for students grading.

Each teacher will have his own profile with login information created by the school administration. With this login information, the teacher will be able to login to the teacher module to start using the tools provided to him to manage the day to day activities.

At the first login, the teacher will need to change his password for security reasons.

Each teacher in the system has his own authority list which we have explained in details earlier in the Admin guide. When the authority is created, the teacher will be able to view it when she/he logins to the teacher module.

We have two types of teachers; content teacher and class teacher.

By **content teachers**, we mean the teachers who are responsible for creating and uploading content for a specific course. By course content we mean the course e-books, the structuring of the course into units, the lessons under each course unit, the assignment category which is responsible for classifying the assignments into, for example, homework, class work, quizzes, and so on. Content also includes the Assignments themselves which can be standard and non-standard. Standard Assignments are the assignments created by the content teacher who is authorized to create content for the specific course. Standard Assignments cannot be edited or deleted by any teacher who does not have content authority for the course that contains this assignment. Standard Assignment also can be shared between all class teachers who have class authority to teach the course that contains this assignment. We call it Standard because we believe that these assignments are coming with the course curriculum to be given to all students without differentiation. They will also be having same “maximum possible points” so that when the students are graded on that assignment they will be fairly evaluated since the maximum grading is the same. On the other hand, the system provides another type of assignments called non-standard assignments. These assignments are Class Teacher tailored assignments which mean they are created by each teacher in her/his class(s) and cannot be shared with other teachers. This is given as a sort of flexibility to allow teachers to create their own assignments and make their own evaluation on some specific aspects they might think not fully covered by the standard assignments. The non-standard assignments have their own

grading points based on the judgment of each teacher who creates the assignments and this teacher is the only one who can edit or delete these assignments.

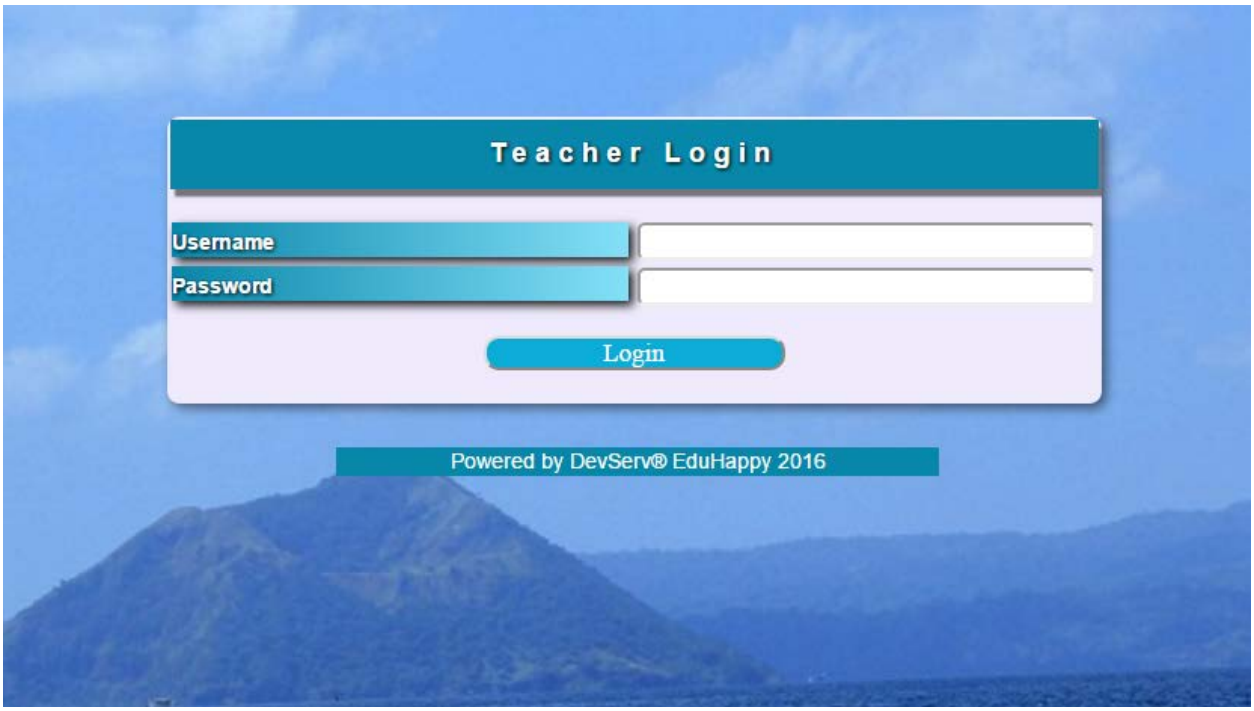
By class teacher we mean the teachers who are authorized to manage the students and their activities in terms of attendance, assignments and exams on daily basis.

Teacher Login

When the teacher accesses the teacher module, the first thing she/he needs to do is to provide the login credentials in the login form. Login form consists of a username and a password.

This login information was previously generated by the Admin when the admin created the teacher profile.

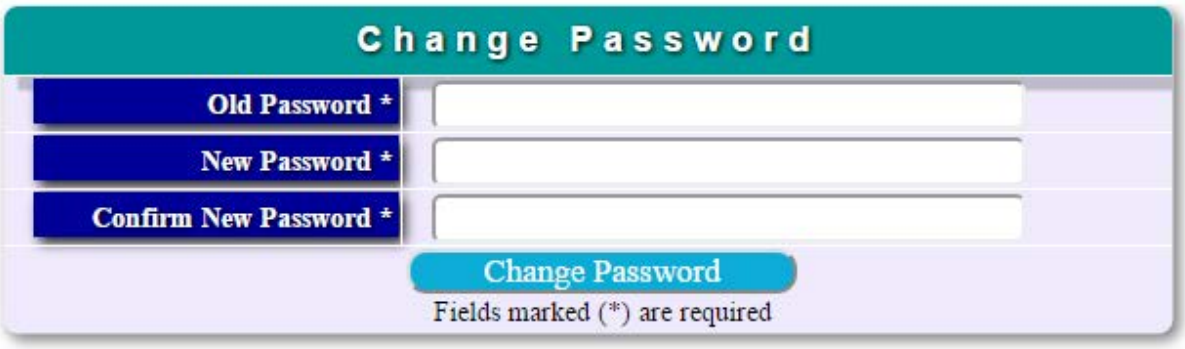
Please enter the username and password sent to you by the admin in the following login form:



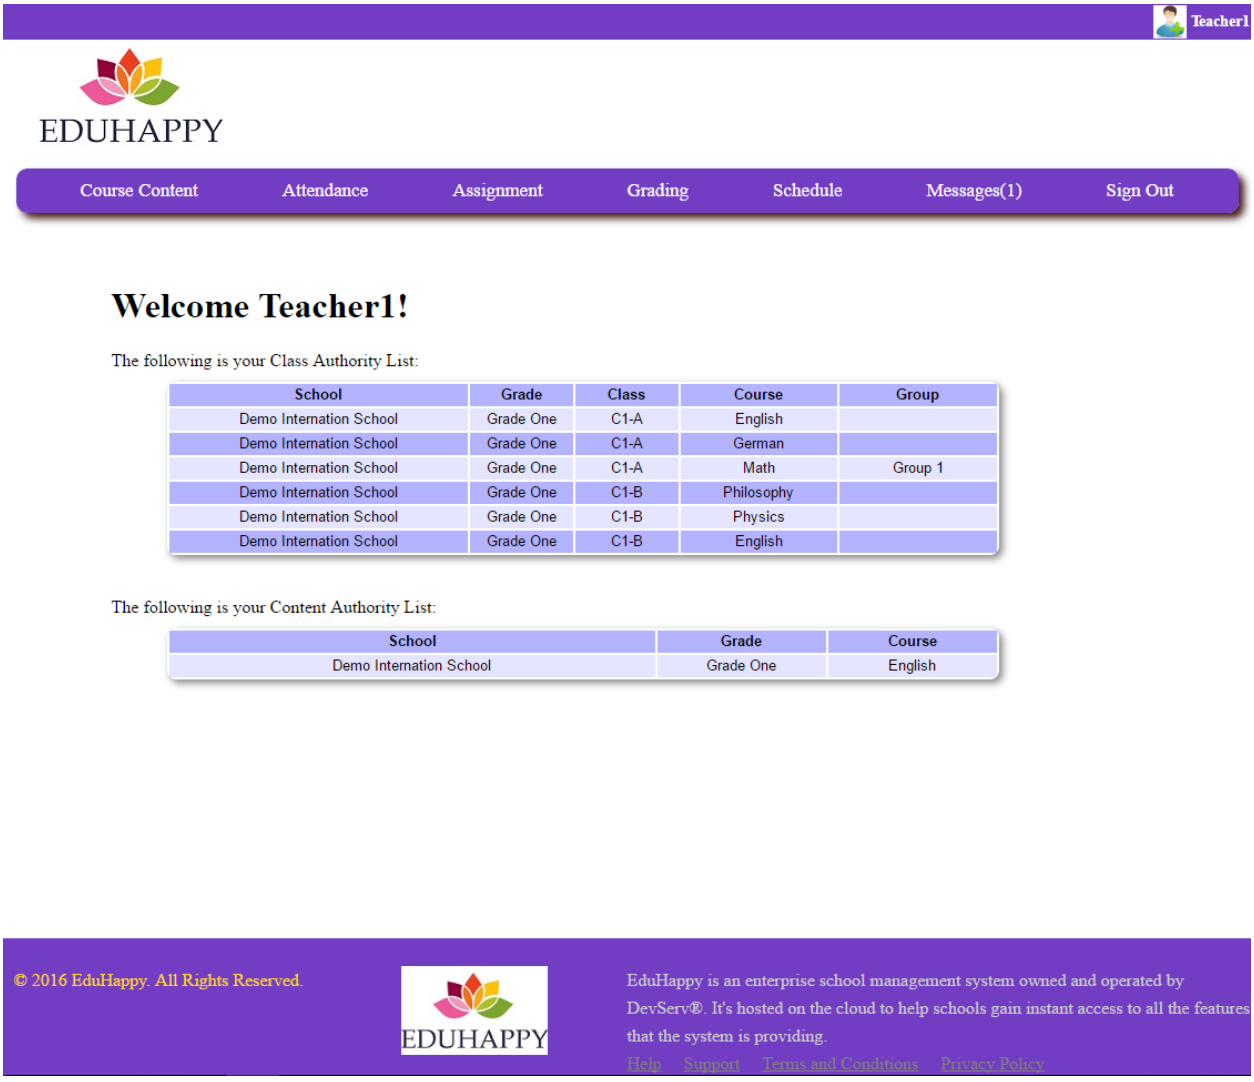
If the login credentials are correct, the system will allow you to get in.

We have created some teachers profiles when we were explaining the Teacher Management session in the Admin Guide. Let's login with one of them, let say Teacher1 which has username (Teacher1) and password (Teacher1_Password):

At the first login the system will ask you to change your password as follows:



When you change the password successfully, the system will redirect you to the teacher's main page as follows:



As you can see, you have two lists displayed; class authority list and content authority list. Class authority list displays the list of classes and courses (and course groups if any) that the logged in

teacher has in a specific school in specific grade according to the class authority list created by the school administration for that teacher.

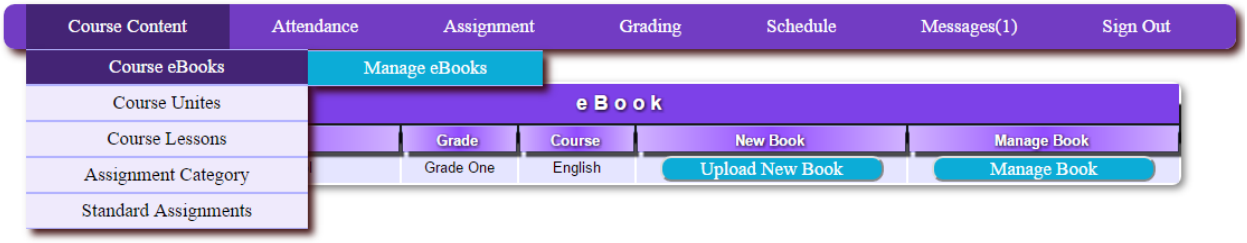
Content authority list displays the list of courses for which the logged in a teacher is authorized to create and upload content.

Course Content

As mentioned earlier, course content includes course e-books, the structuring the course into units, the lessons under each course unit, the assignment category which is responsible for classifying the assignments into, for example, home work, class work, quizzes, and so on. It also covers the standard assignment and we have already discussed what they are and what the difference between the standard and non-standard assignments is. Also, note that course content covers only standard assignments. Non-standard assignments are the responsibility of the class teacher, not the content teacher.

Course eBooks

To create course eBooks profile and to upload or attach eBooks files with the eBook profile, go to Course Content > Course eBooks > Manage eBooks as follows:



Manage eBooks

The system will display the following table:

This table lists a row for each item in the content authority list related to that teacher. Each raw has a school name, grade, course as well as two buttons for the actions that can be taken.

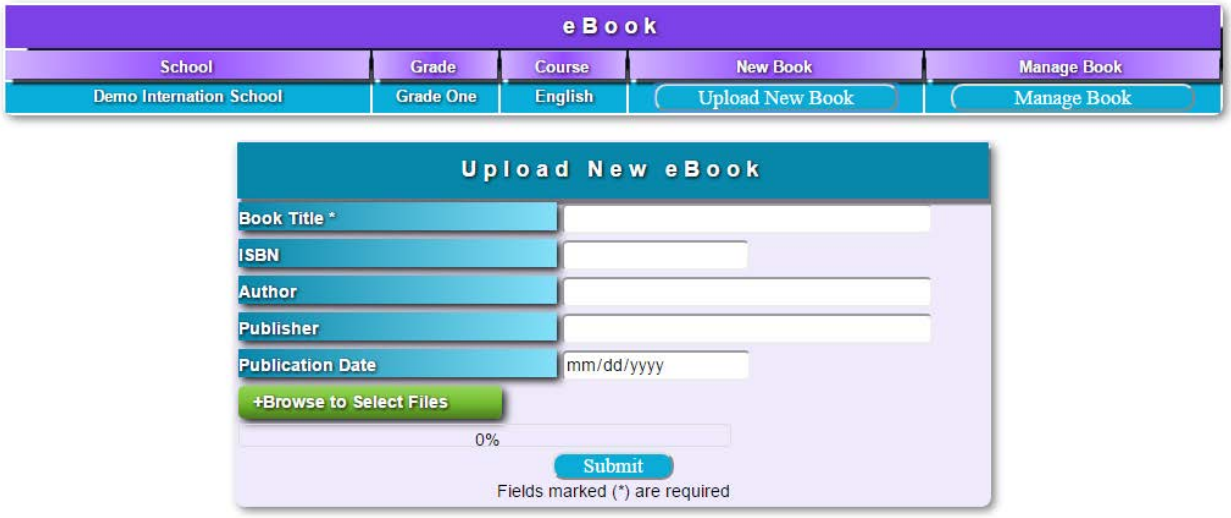
The two buttons are “Upload New Book” and “Manage Book”.

The “Upload New Book” is the action you will take when you need to create a new eBook profile and attach eBook file with that profile.

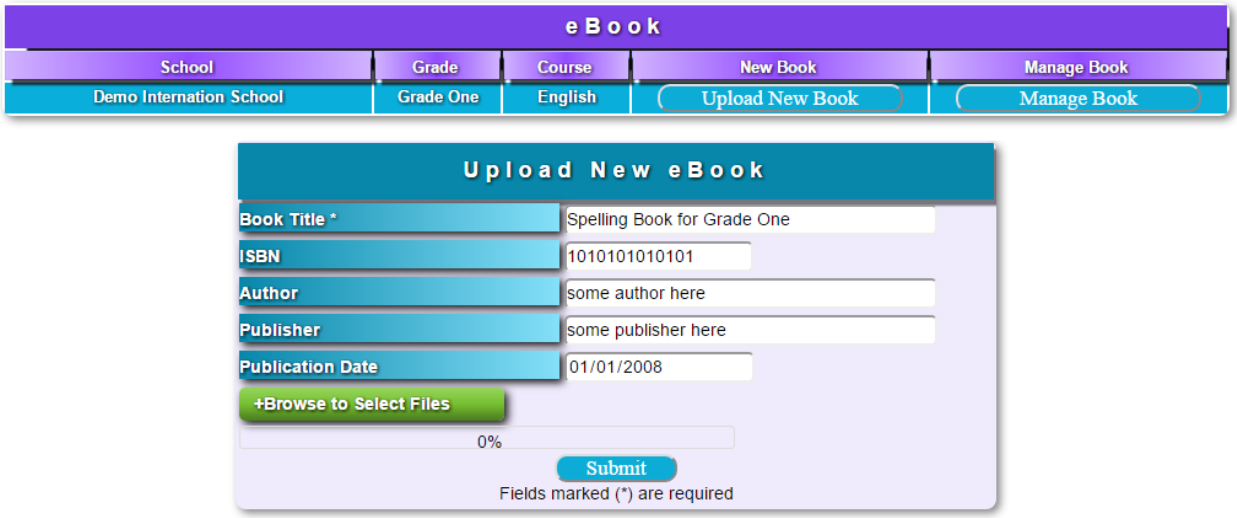
The “Manage Book” is the action you will take when you need to edit in the already created eBook profile and manage the eBook files you have already attached to that this eBook.

Upload New Book

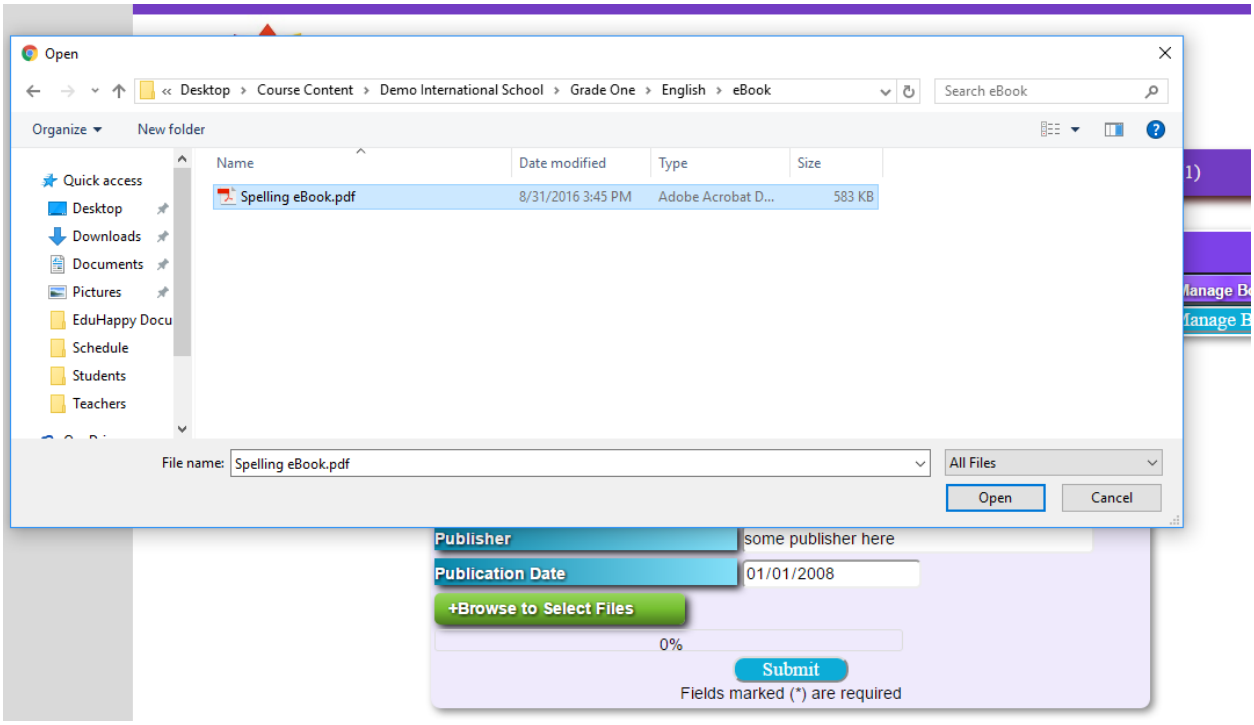
To create a new eBook profile and upload eBook file, click on “Upload New Book” button. The system will display a form for you to create the profile and upload the file as follows:



Let's create the following eBook:

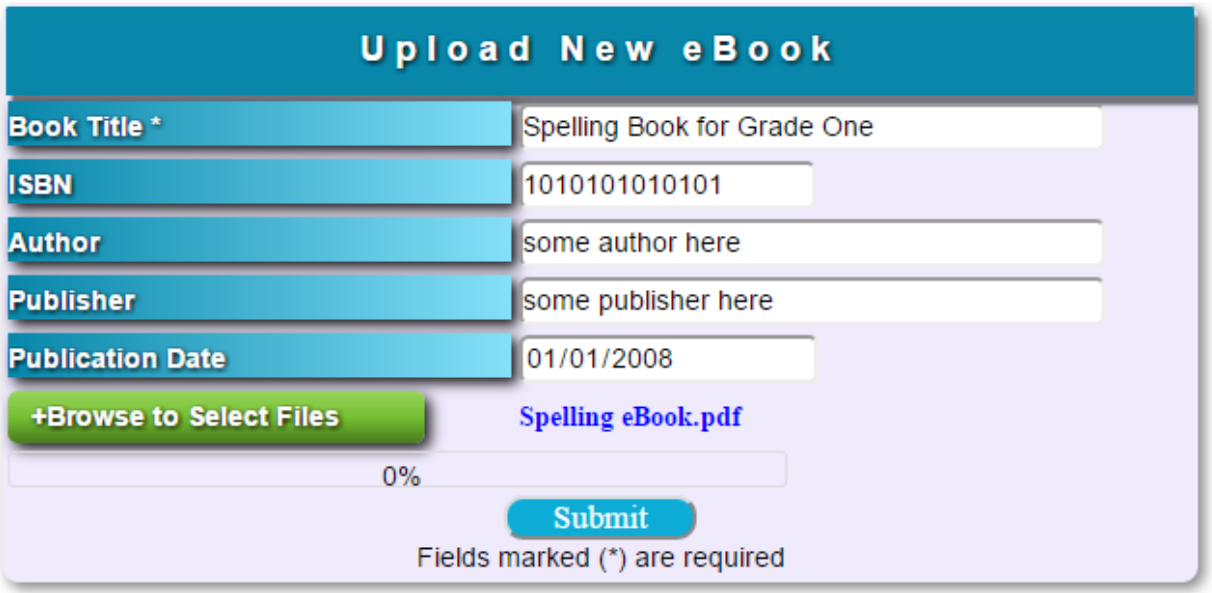


To upload a file to be attached with this eBook, click on “Browse to Select Files” button. The system will give you the choice to select the file from your PC as follows:

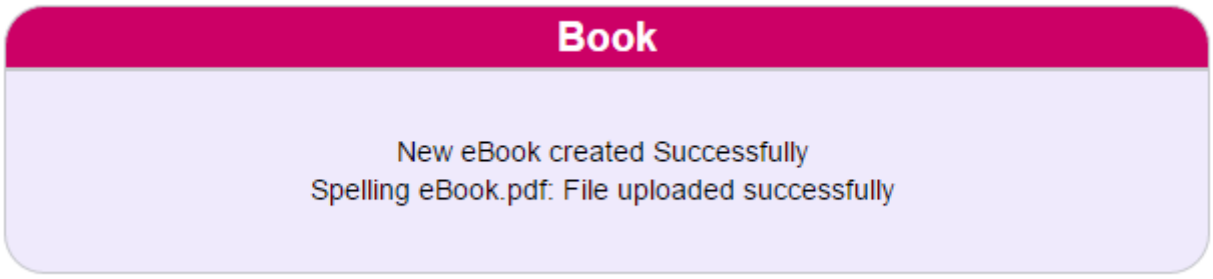


If you would like to upload many files at the same time, press Control button while selecting the files.

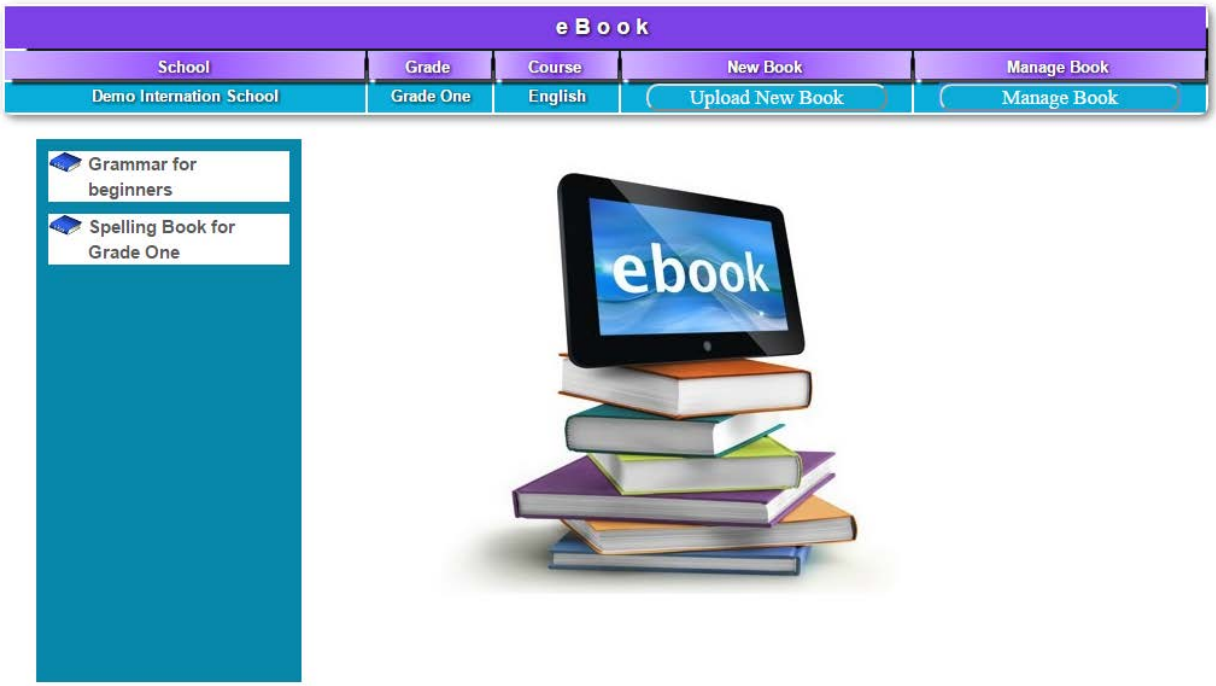
Select the file you would like to upload and attach to the eBook profile:



Now click Submit to create the eBook. The system will respond with the following confirmation message:



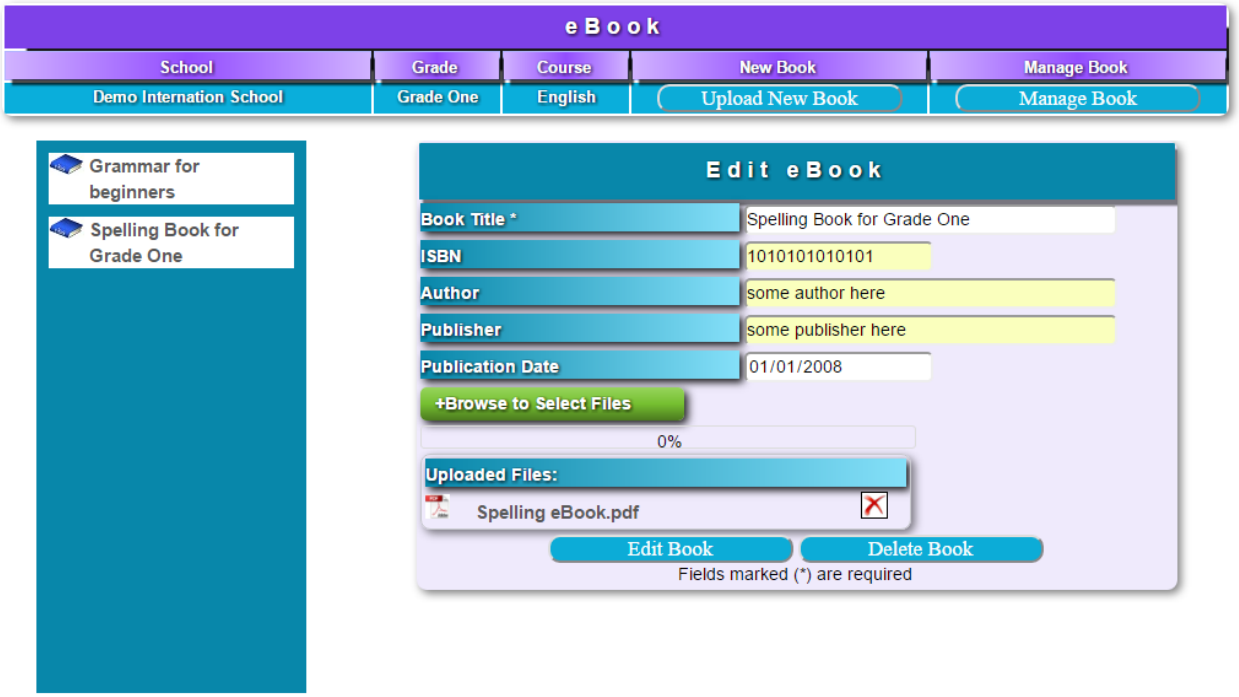
To edit the eBook you have previously created, click on “Manage Book”. The system will display the list of eBooks related to the course in the same row of the “Manage Book” button you have clicked. In this case, it’s the English course as shown in the below screen:



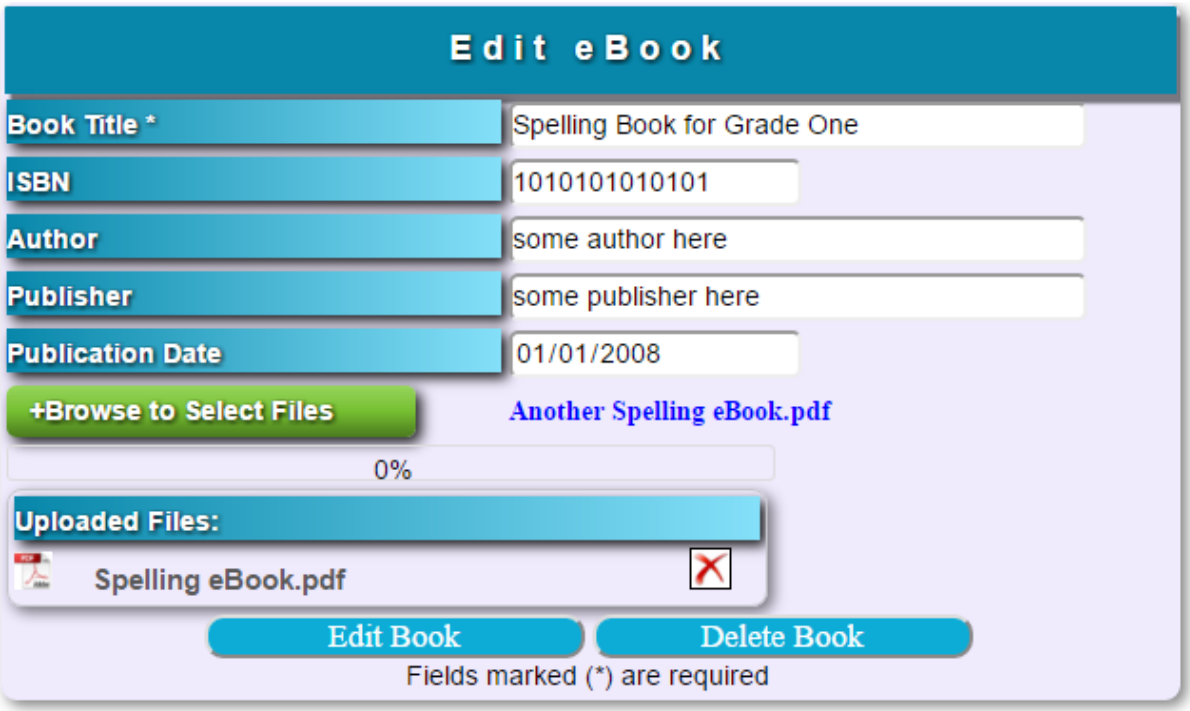
The list in the left column represents the eBooks you have created in English course. Choose one of the eBooks in the list and click on the eBook name to start managing this eBook.

Let's click on the first eBook on the list. The system will display the Manage eBook form as below:

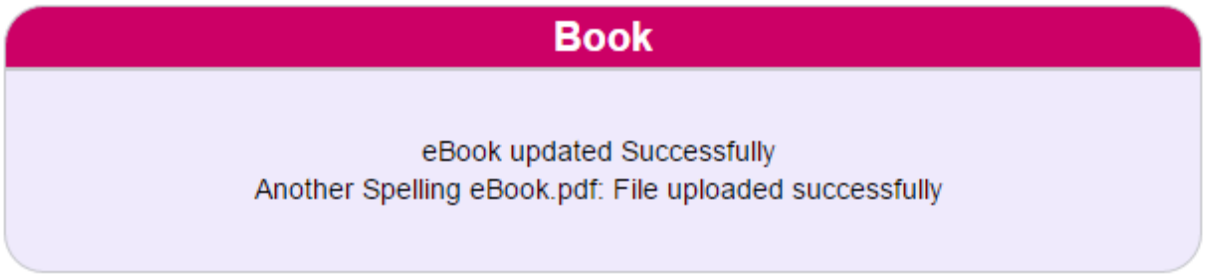
Edit book



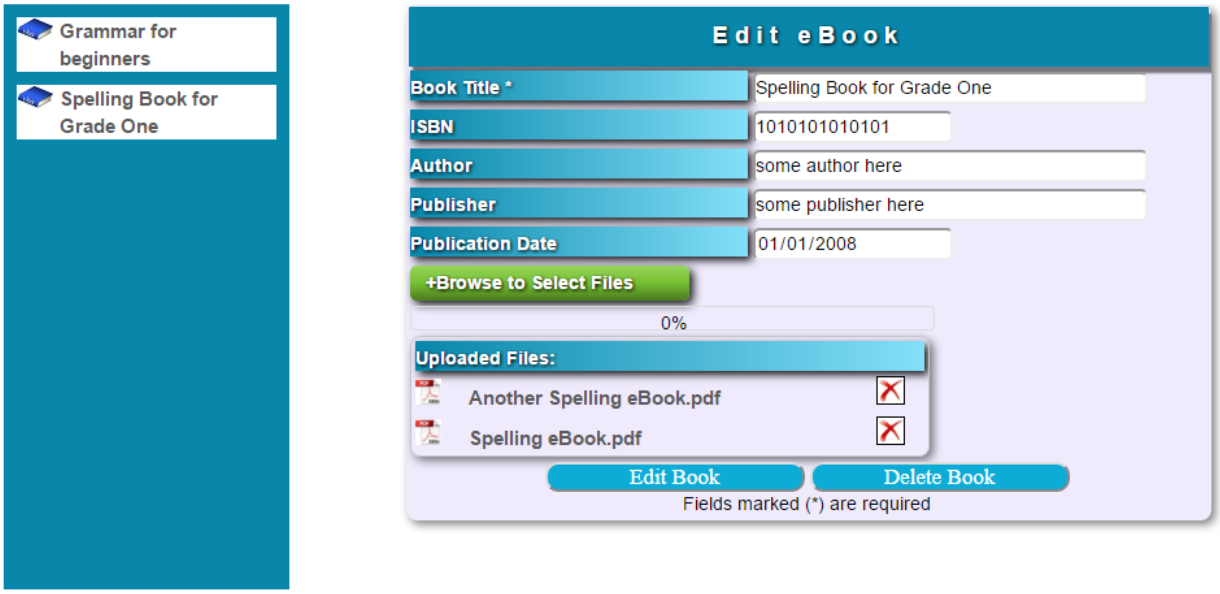
You can now edit any of the eBook fields or upload another eBook file like below:



Click Edit Book to upload another file and save the changes:

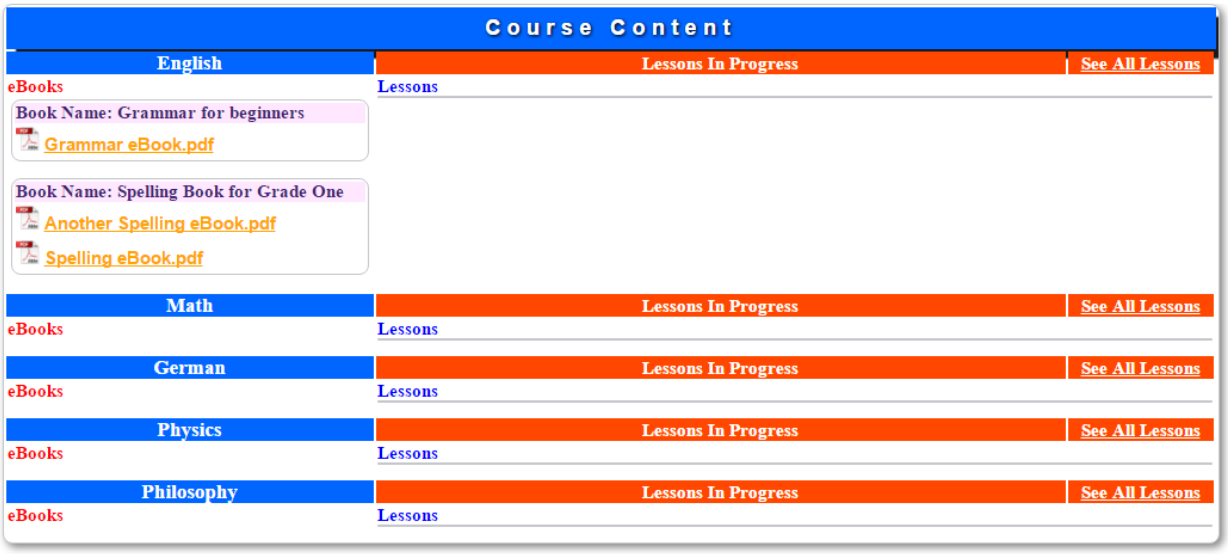


Select the same eBook again from the left column to check for the changes:



As you can notice under Uploaded Files, another file has been uploaded and added to the eBook profile.

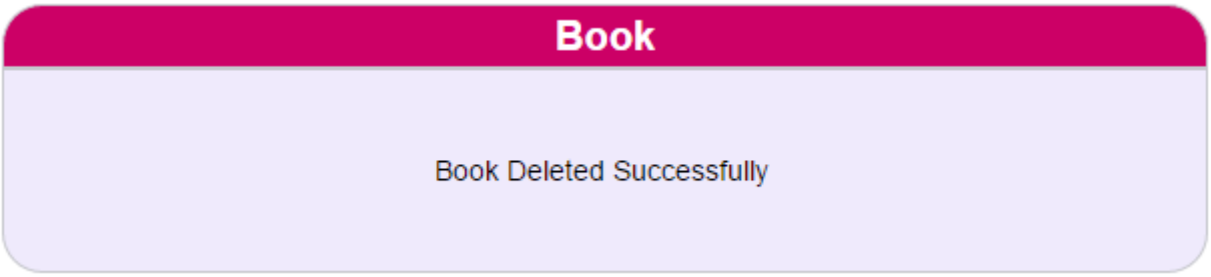
Now, let's go to the Student Portal and check how it looks like from students' point of view after we have added some eBooks. We will login with Student1 username and password since Student1 belongs to Grade One. After login, the student will go to Course Content page. The following screen will be displayed:



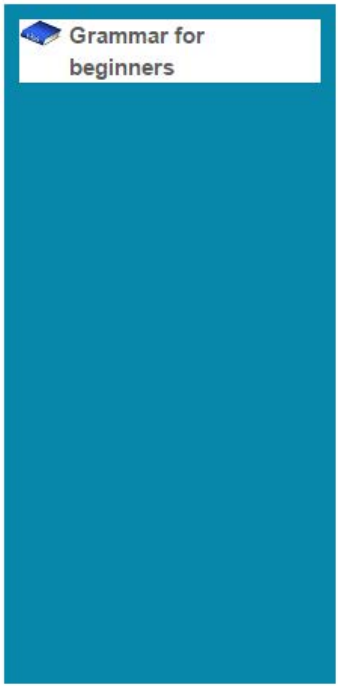
As you can see from the screen above, under English, there are some eBooks with book name and book file. Students now can download the eBook to their PCs.

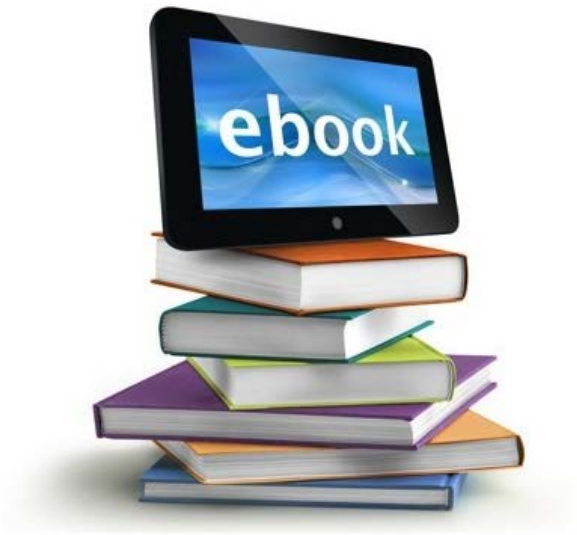
Back to teacher, if you would like to delete any file from the list of files attached to the eBook, click on the red X button next to the file you would like to delete and it will be immediately deleted.

If you need to delete the whole eBook profile with all attached files, click on Delete Book. Let's delete "Spelling Book for Grade One". The system will delete the eBook profile and display the following confirmation message:



Now click Manage Book next to the English course from the eBook table to review your changes. The following screen will be displayed:





Notice that the eBook we have just deleted has disappeared from the eBooks list in the left column. Let's check the student portal as well, the following will be displayed:

Notice that the eBook "Spelling Book for Grade One" has been removed from the list.

Let's create some eBooks for Math and German courses as well. To do this, the teacher has to have this in his content authority list. Since Teacher1 doesn't have Math and German in his authority list, we will have to add them from Admin Module. We will not show how to do this

again since we have already detailed this in the Admin Guid. Let's assume that we have already assigned these two courses to Teacher1.

This is the new authority lists the teacher will see after re-login:

Welcome Teacher1!

The following is your Class Authority List:

School	Grade	Class	Course	Group
Demo Internation School	Grade One	C1-A	English	
Demo Internation School	Grade One	C1-A	German	
Demo Internation School	Grade One	C1-A	Math	Group 1
Demo Internation School	Grade One	C1-B	Philosophy	
Demo Internation School	Grade One	C1-B	Physics	
Demo Internation School	Grade One	C1-B	English	

The following is your Content Authority List:

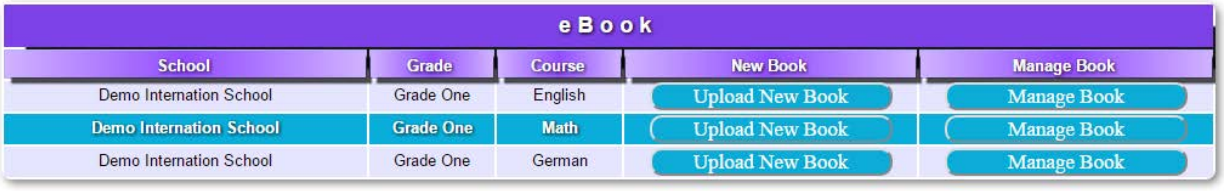
School	Grade	Course
Demo Internation School	Grade One	English
Demo Internation School	Grade One	Math
Demo Internation School	Grade One	German

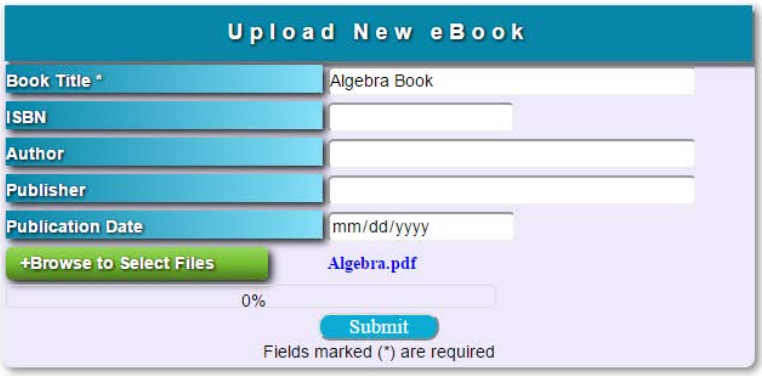
This is the new eBook table that will be displayed to Teacher1:

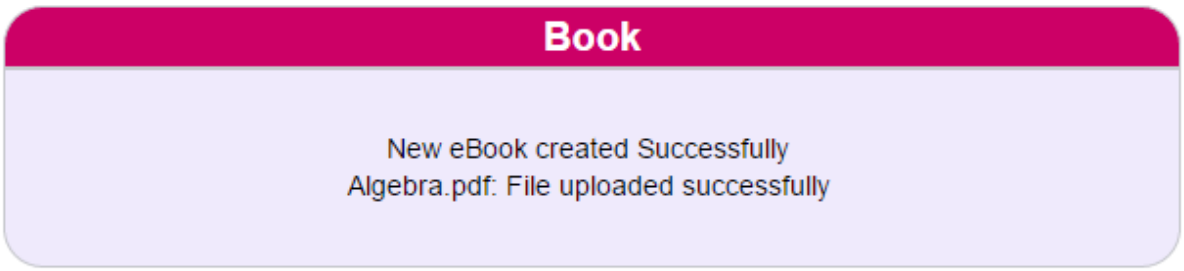
eBook				
School	Grade	Course	New Book	Manage Book
Demo Internation School	Grade One	English	Upload New Book	Manage Book
Demo Internation School	Grade One	Math	Upload New Book	Manage Book
Demo Internation School	Grade One	German	Upload New Book	Manage Book

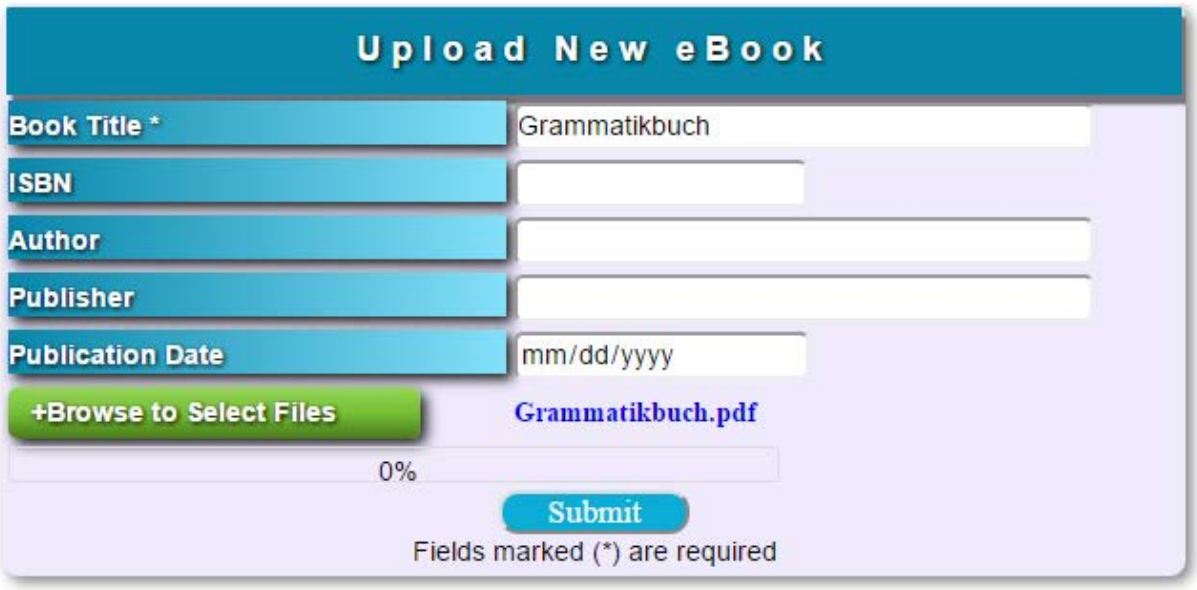
Notice that Math and English courses have been added to the table and now Teacher1 is authorized to create and upload content.

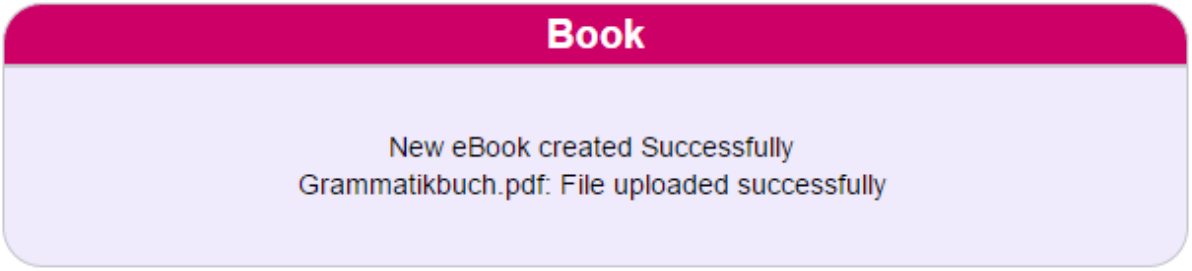
Let's create an eBook in Math and another one in German and then check the student portal again.



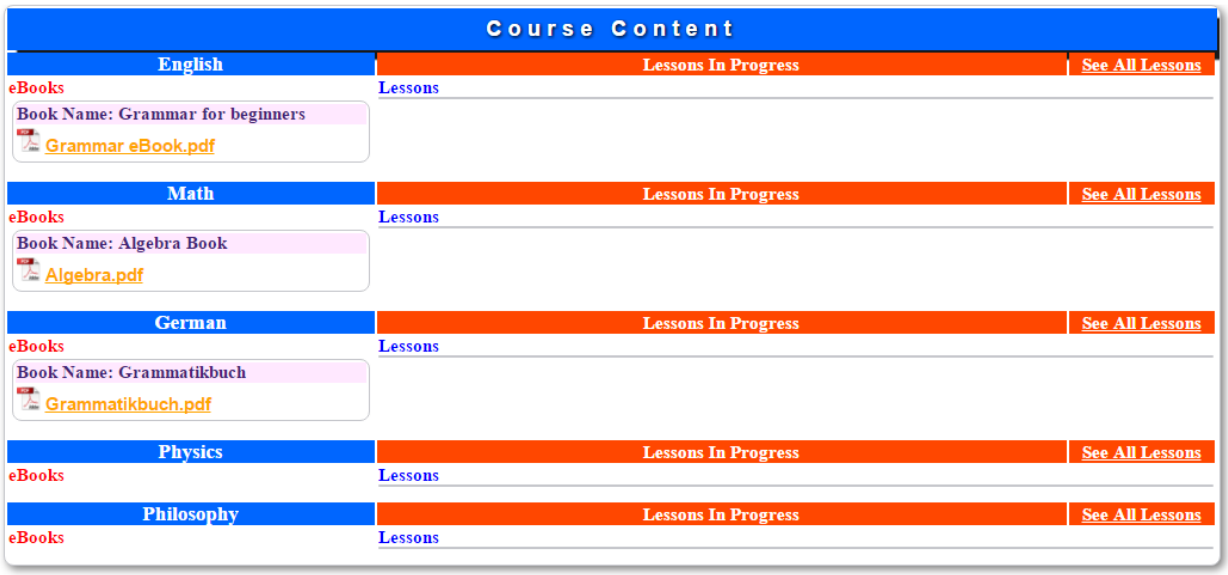








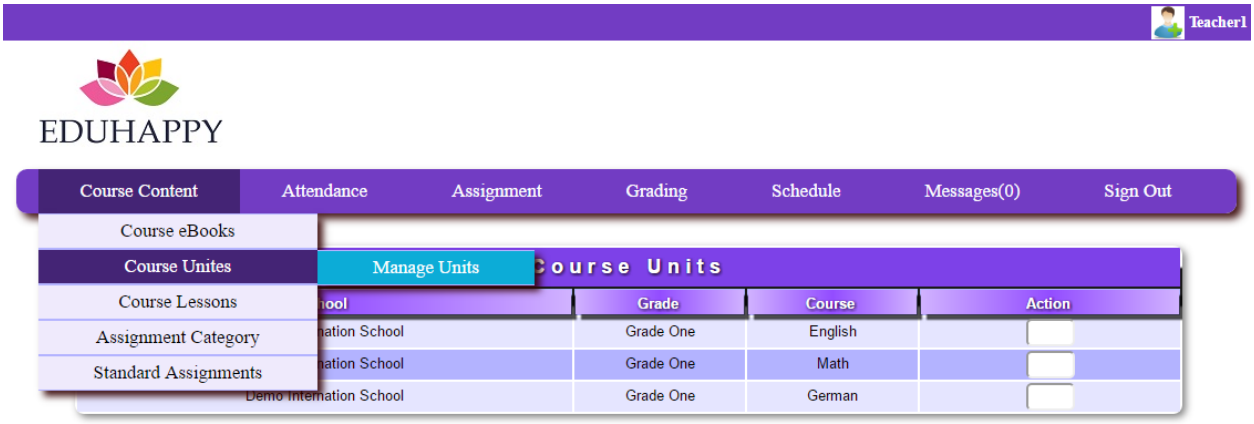
Now check the student portal, students in Grade One will get the following when they go to Course Content page:



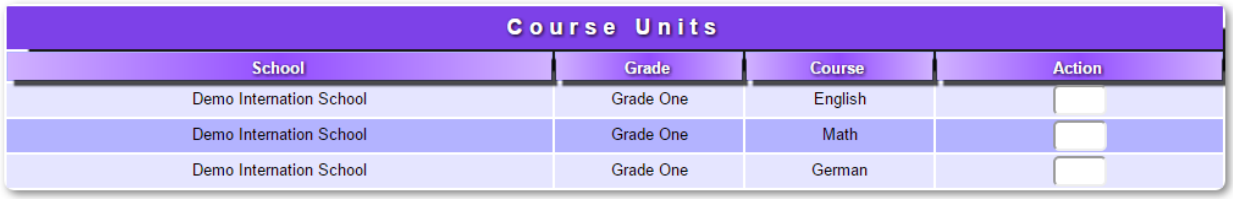
Course Units

Each course may consist of units. Each unit then can include lessons.

In order to create units, go to Course Content > Course Units> Manage Units as follows:



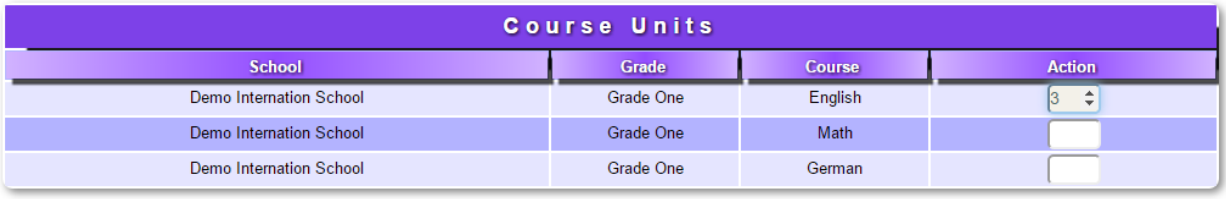
The system will display the following Course Unit table:



Course Units

School	Grade	Course	Action
Demo Internation School	Grade One	English	
Demo Internation School	Grade One	Math	
Demo Internation School	Grade One	German	

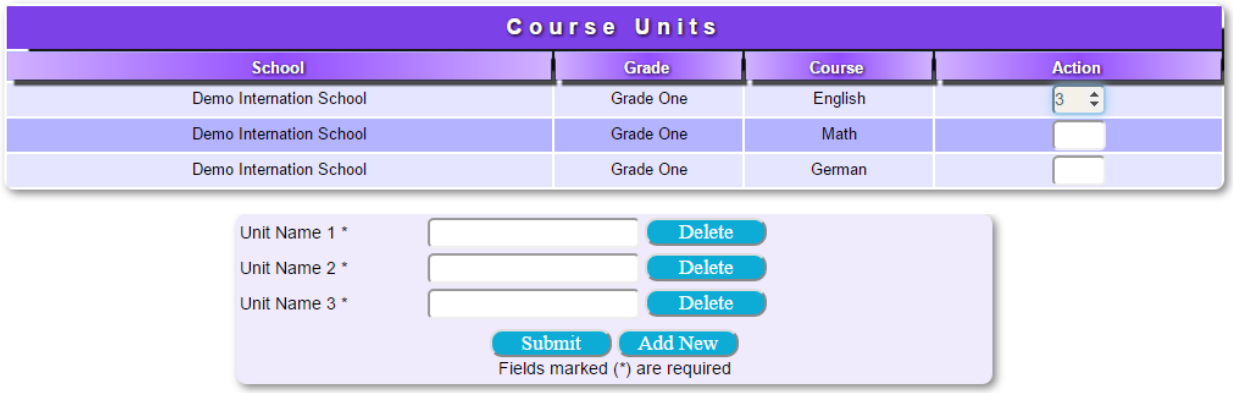
Enter the number of units you need to create next to the course under which you would like to create these units. For instance, we will create three units under English course, so we will enter number 3 in the text box next to English course as follows:



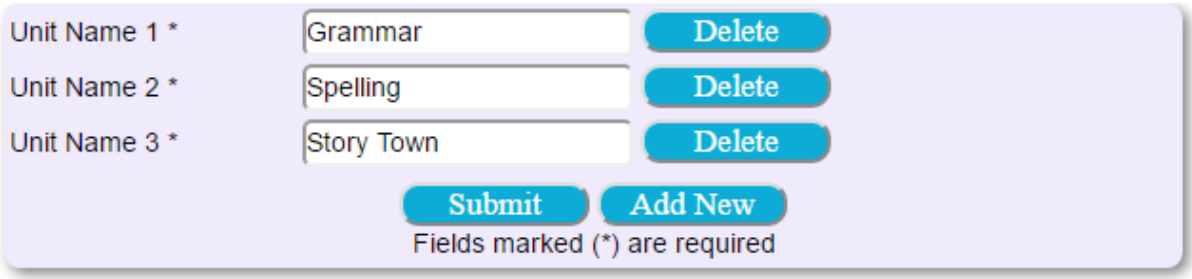
Course Units

School	Grade	Course	Action
Demo Internation School	Grade One	English	3
Demo Internation School	Grade One	Math	
Demo Internation School	Grade One	German	

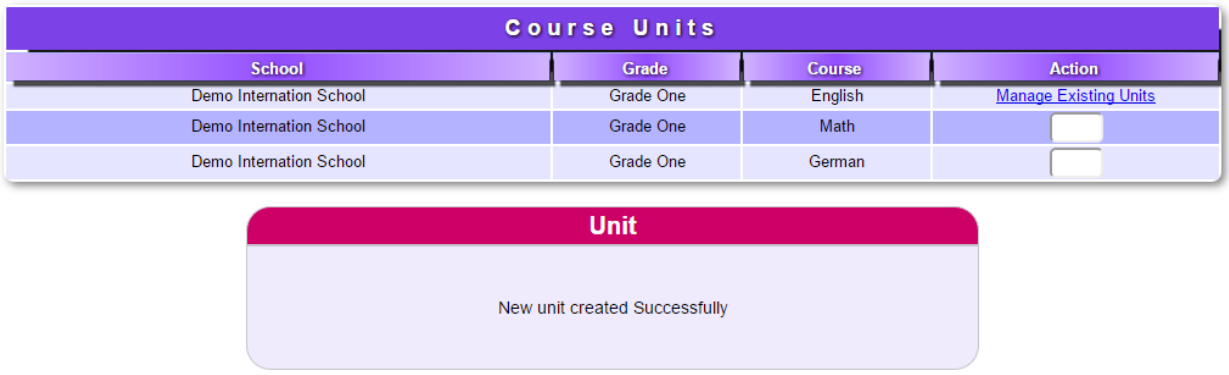
Press enter. The system will display the following screen:



As you can see, there will be a form that consists of three rows for each unit. Enter the name of each unit as follows:

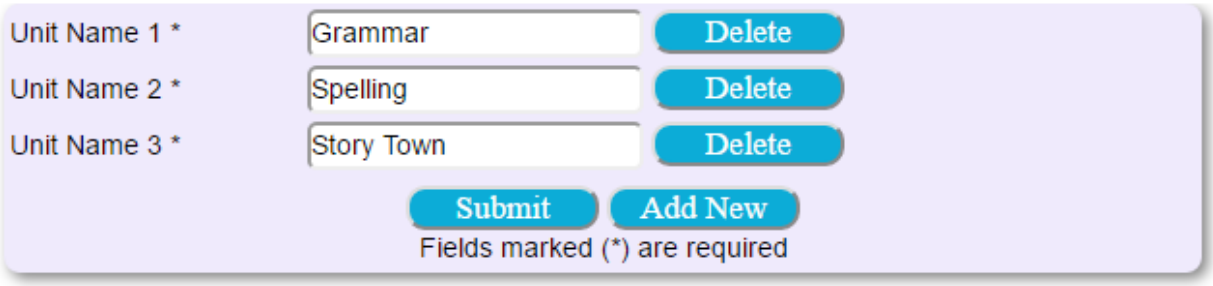


When you finish, click Submit button. The system will respond with the following confirmation message:



Notice that the text box next to English course in the table has been replaced by a link “Manage Existing Units”. This is to give you the possibility to manage the units you have previously created.

To manage the units, click on the link “Manage Existing Units”. The system will display the following form:

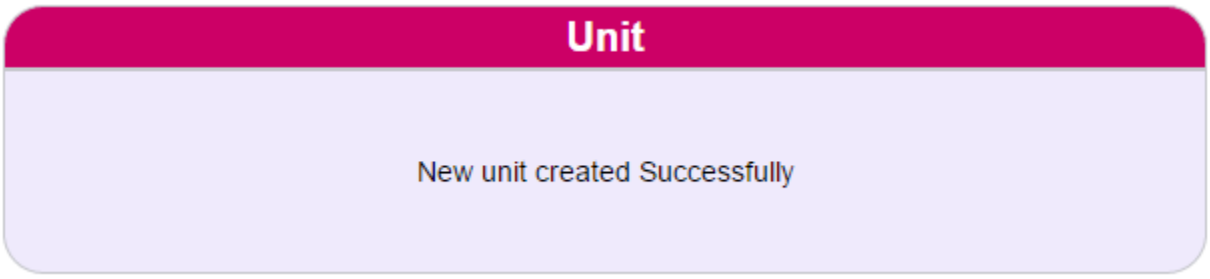


Now you can edit any unit name as needed and click Submit button to save the changes. You can also add another unit if you click Add New button as follows:

You will have another unit row add in the form to allow you to enter the new unit.

Let’s enter unit name “Unit 4” as follows:

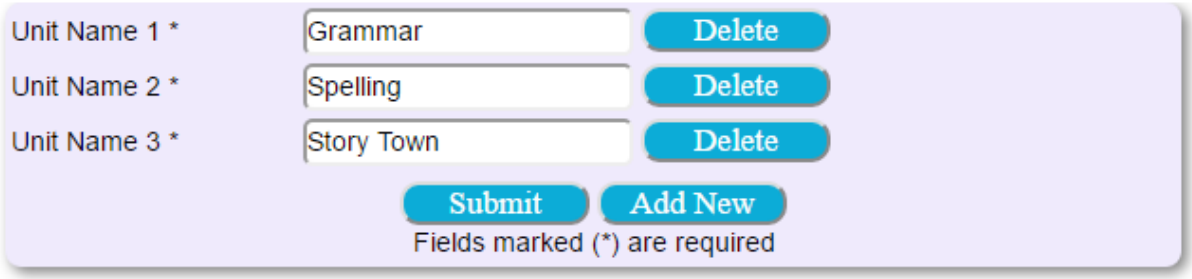
Click on the Submit button to create the new unit. Again the system will respond with the confirmation message below:



Click again on the link “Manage Existing Units”. The system will display the following form:

As you can see, Unit 4 has been created.

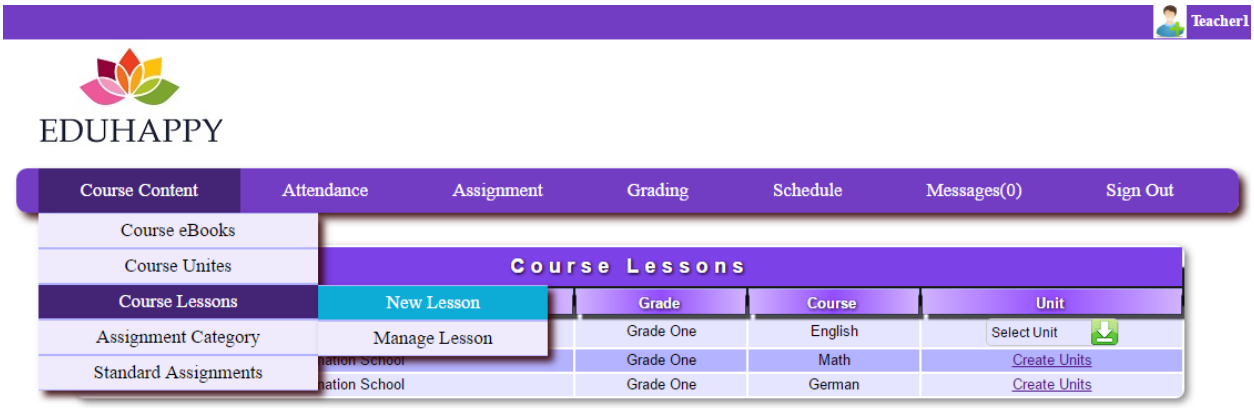
If you would like to delete a unit, click on Delete button next to the unit name and the unit will be deleted immediately as follows:



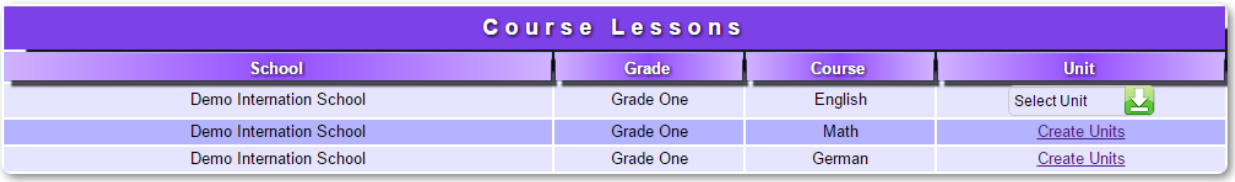
Course Lessons

To create course lessons, you need to choose the course, the unit under which you need to create this lesson and then start creating the lesson with all the lesson fields such as the name, description, and attached files.

To create new lesson, go to Course Content > Course Lessons > New Lesson as follows:

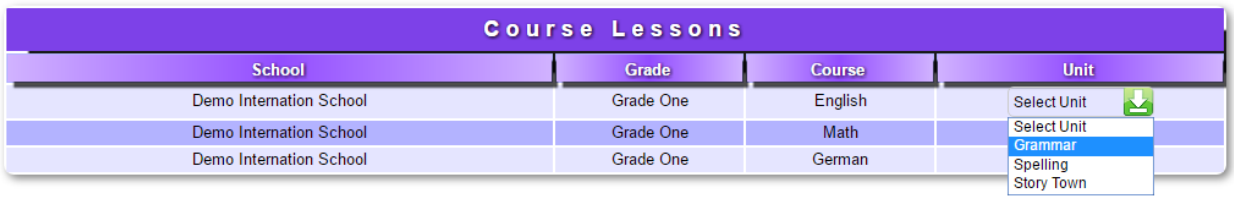


The system will display the following Course Lesson table:



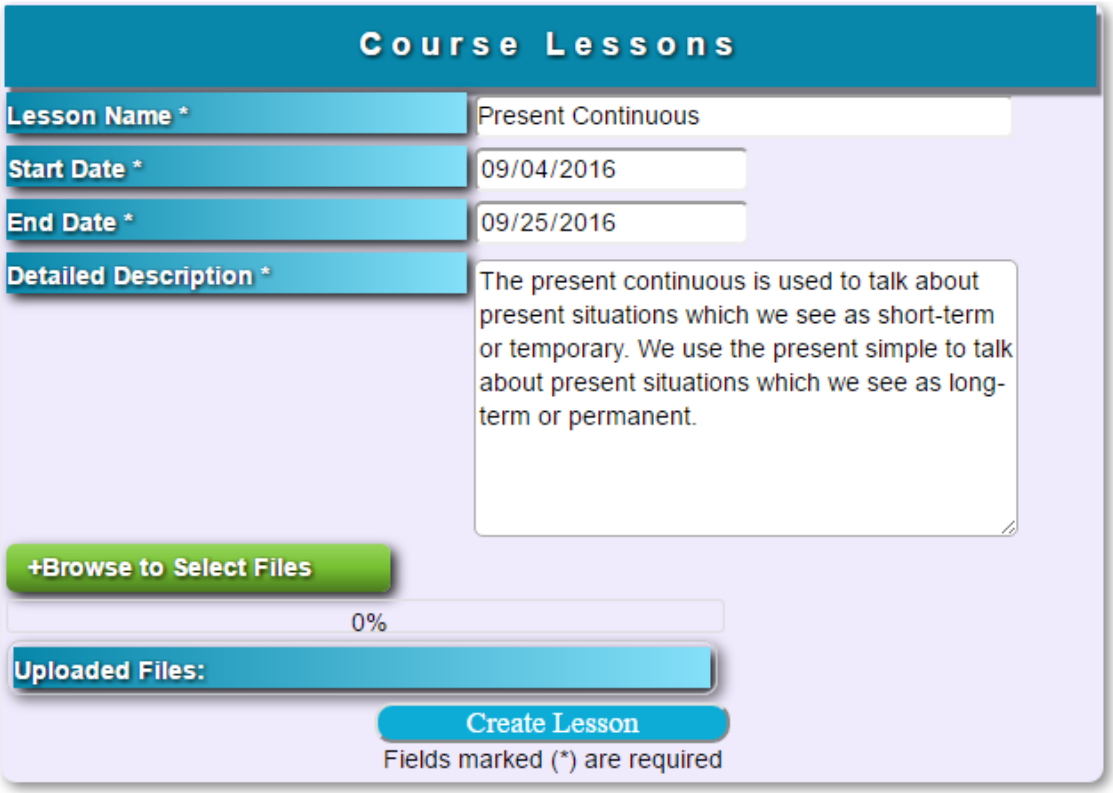
You can notice that next to English course you will find a drop down list that contains the units you have created in the previous step. However, the Math and German courses do not have the same drop down lists. Instead, there is link “Create Units”. This is because we haven’t yet created any units under these courses. The link will redirect you to Create Unit form so that you can create units under these courses.

Let’s select one of the “Grammar” units from the drop down list next to the English course to create a new lesson as follows:



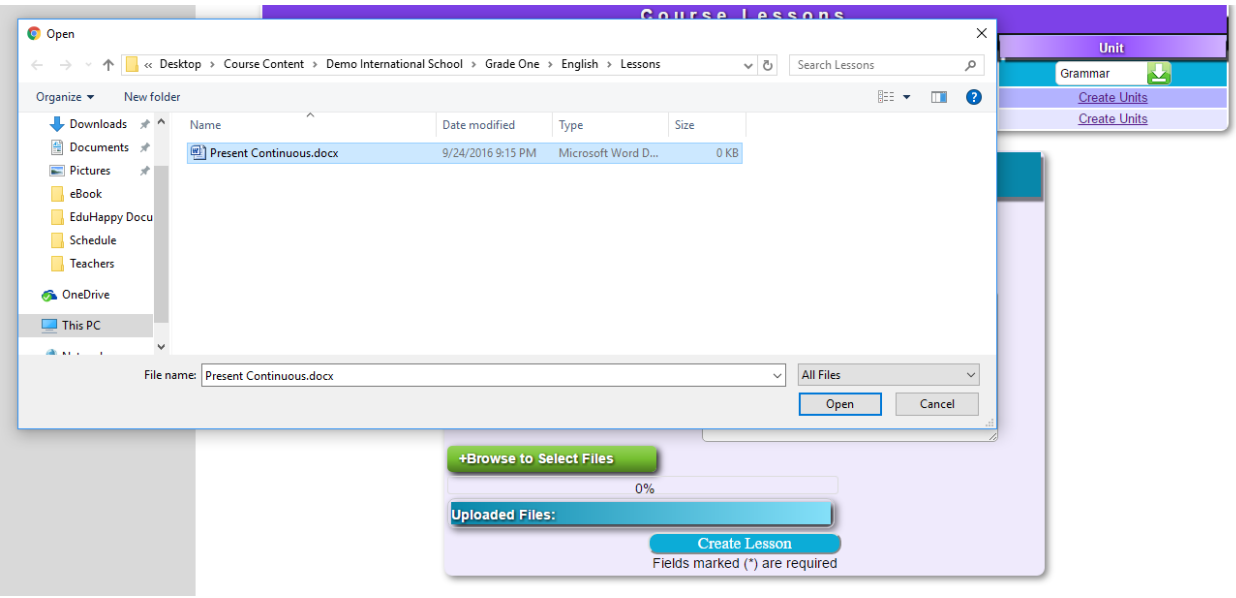
The following Course Lessons form will be displayed:

You need to enter all the required fields to create the lesson as follows:



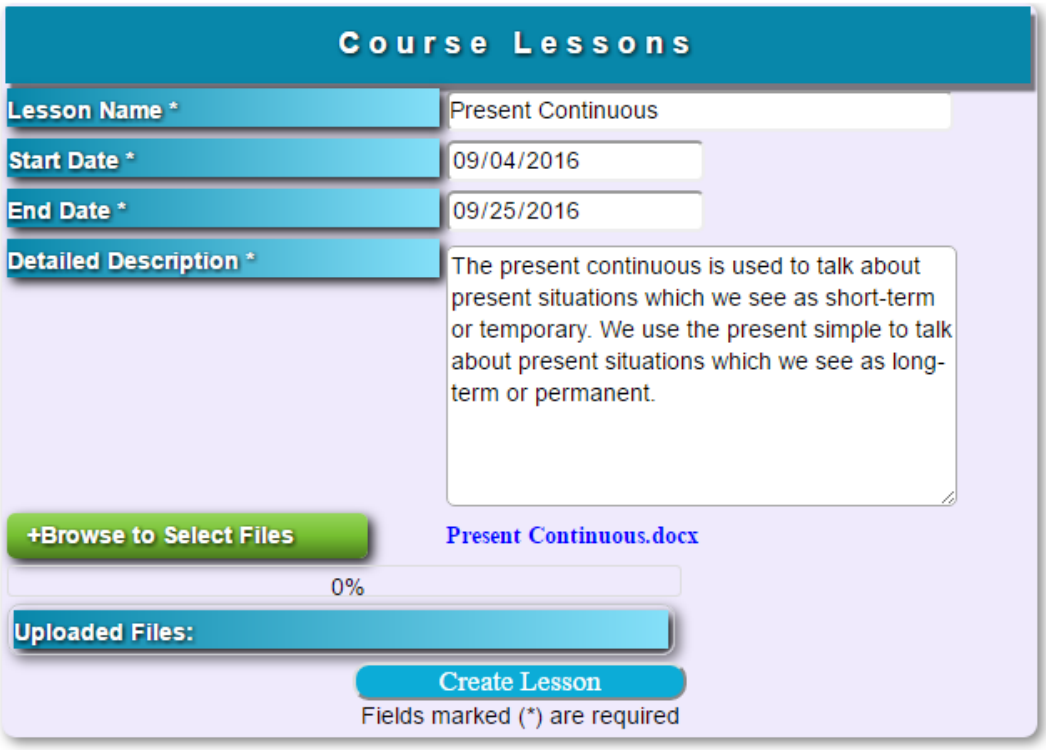
You also can upload files to be attached to the lesson you are creating.

Click on Browse to Select Files to select the file form your the file system on your PC:



If you would like to upload many files at the same time, press Control button while selecting the files

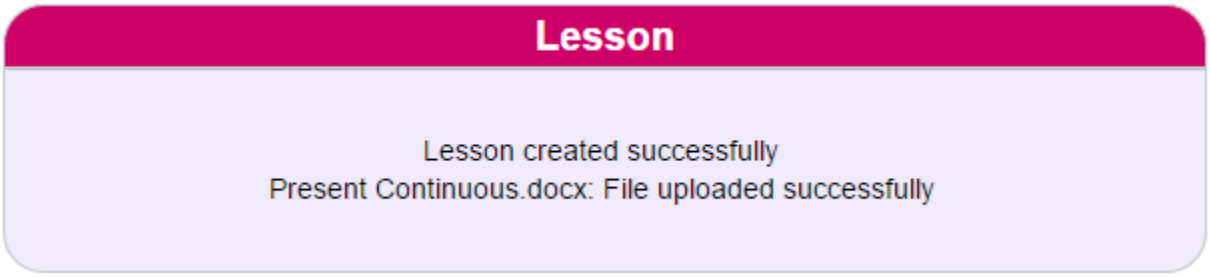
Select the file and click Open button. The system will show the following:



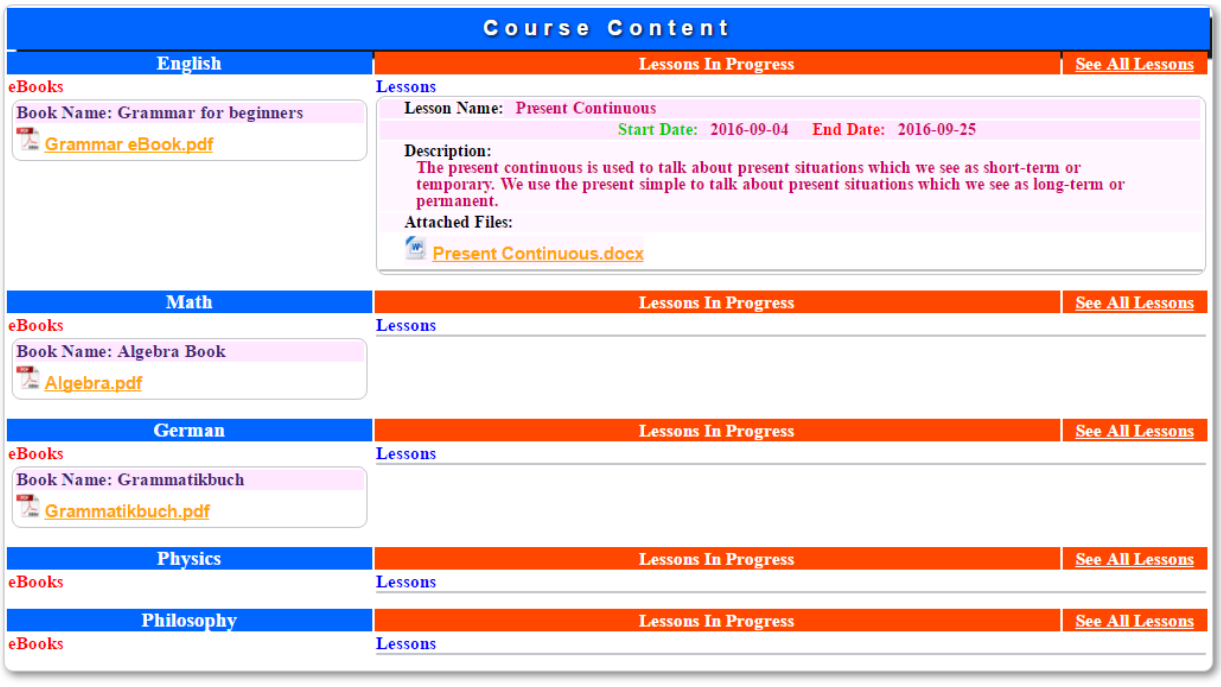
Important Rule:

The start and end dates will determine when the lesson will be displayed to the student in the Student Portal. If the student logged in in a date that is between these start and end dates, then the system would display the lesson. Otherwise, the lesson will not be displayed.

Let's now finish creating the lesson. Click on Create Lesson button. The system will respond with the following confirmation message:



Now, let's login to the Student Portal to check how this lesson looks like from the student point of view:



You can notice that the lesson we have just created is now showing up under “Lessons In Progress” tab which is developed specifically to allow fast access to the lesson that is being taught now without wasting student’s time trying to search for the lesson.

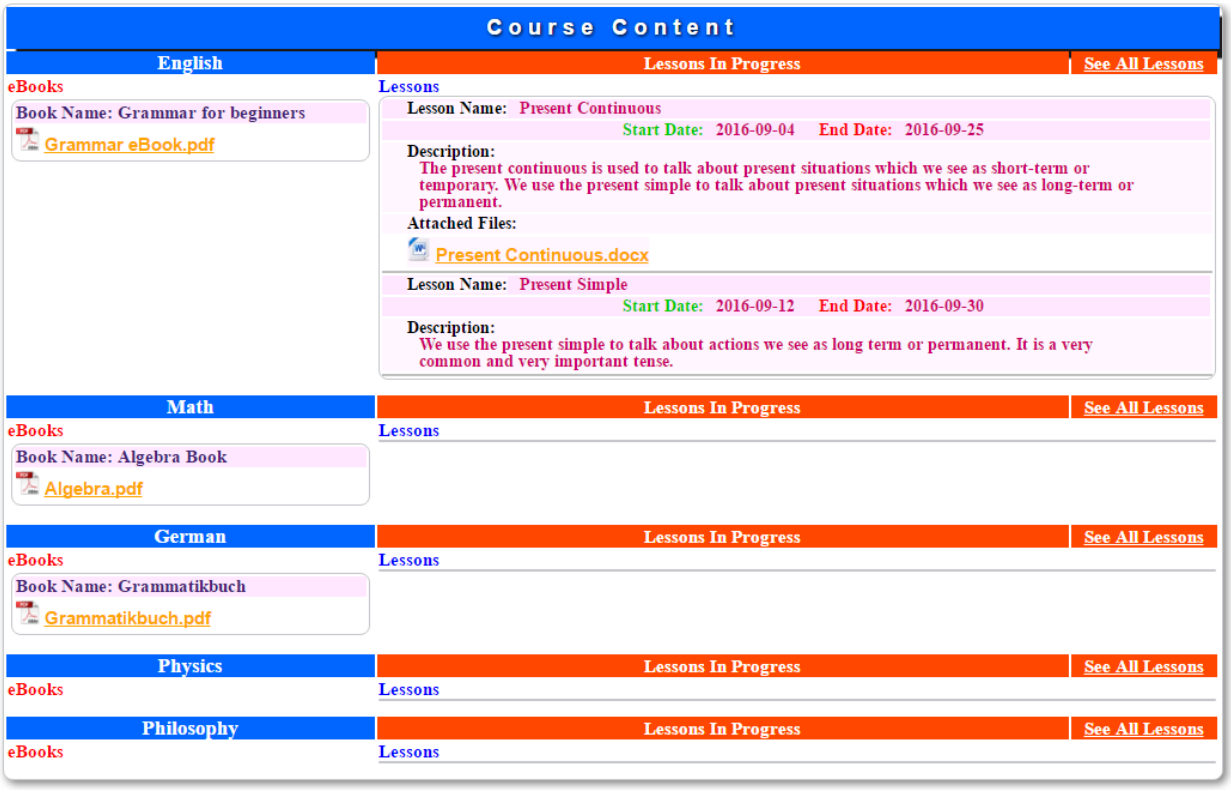
Note that the lesson is showing up under this tab because we have logged in on September 24, 2016, which is between September 4, 2016 and September 25, 2016. If we logged again after September 25, 2016, we will not see this lesson because it will be removed from “Lesson in Progress” tab. However, the student will still be able to access it anytime by visiting the link “See All Lessons”.

Back to the teacher, it’s also possible to add many lessons to be displayed at the same time under “Lesson in Progress” tab.

As an example, let’s create another lesson such as the following one:

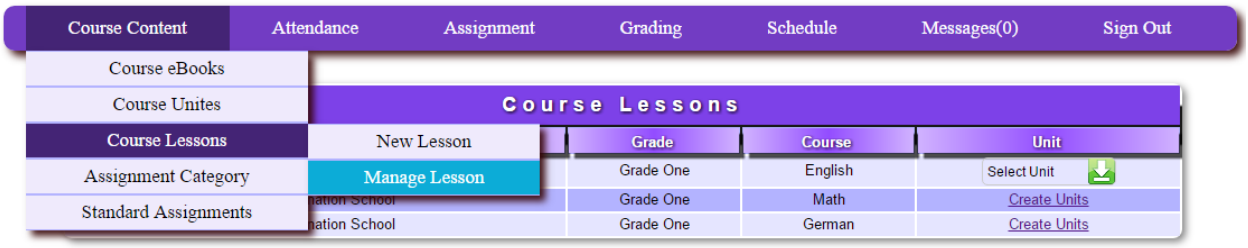
Notice the start and end dates.

If we login again to the student portal, the following will be displayed:

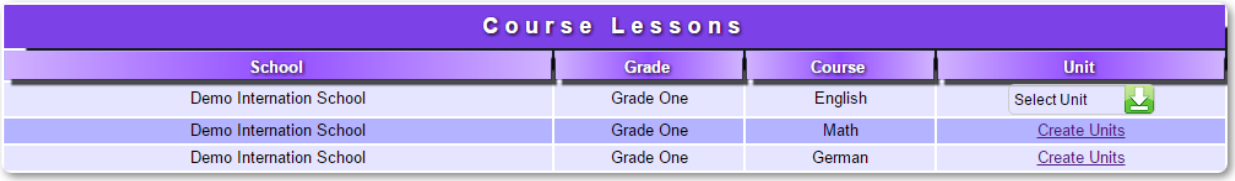


You can see now that there are two lessons in progress.

If you would like to manage a lesson, go to Course Content > Course Lessons > Manage Lesson as follows:

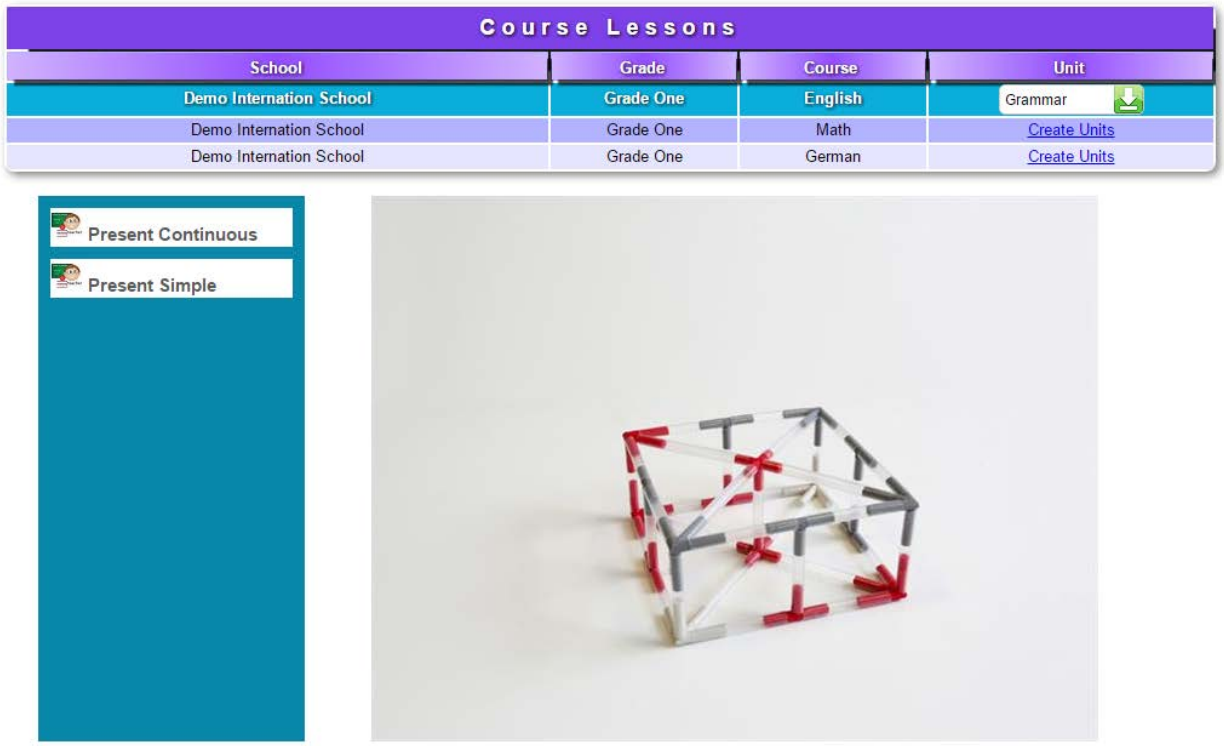


You will get the following Course Lessons table:

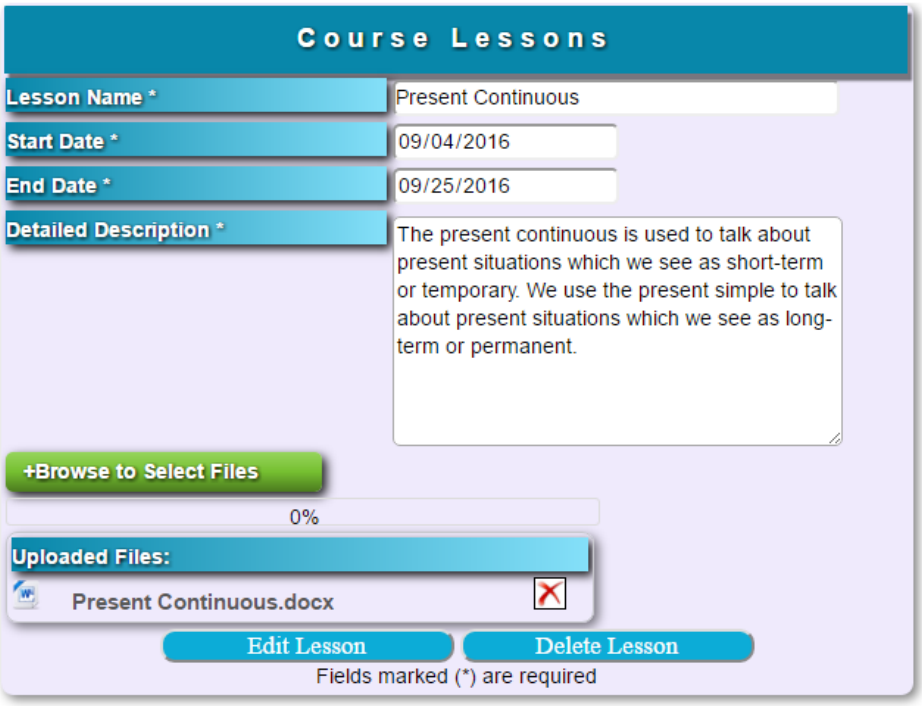


Select one of the units in the drop down list next to the course to which the lesson belongs.

The system will display the list of the lessons under the selected unit as follows:

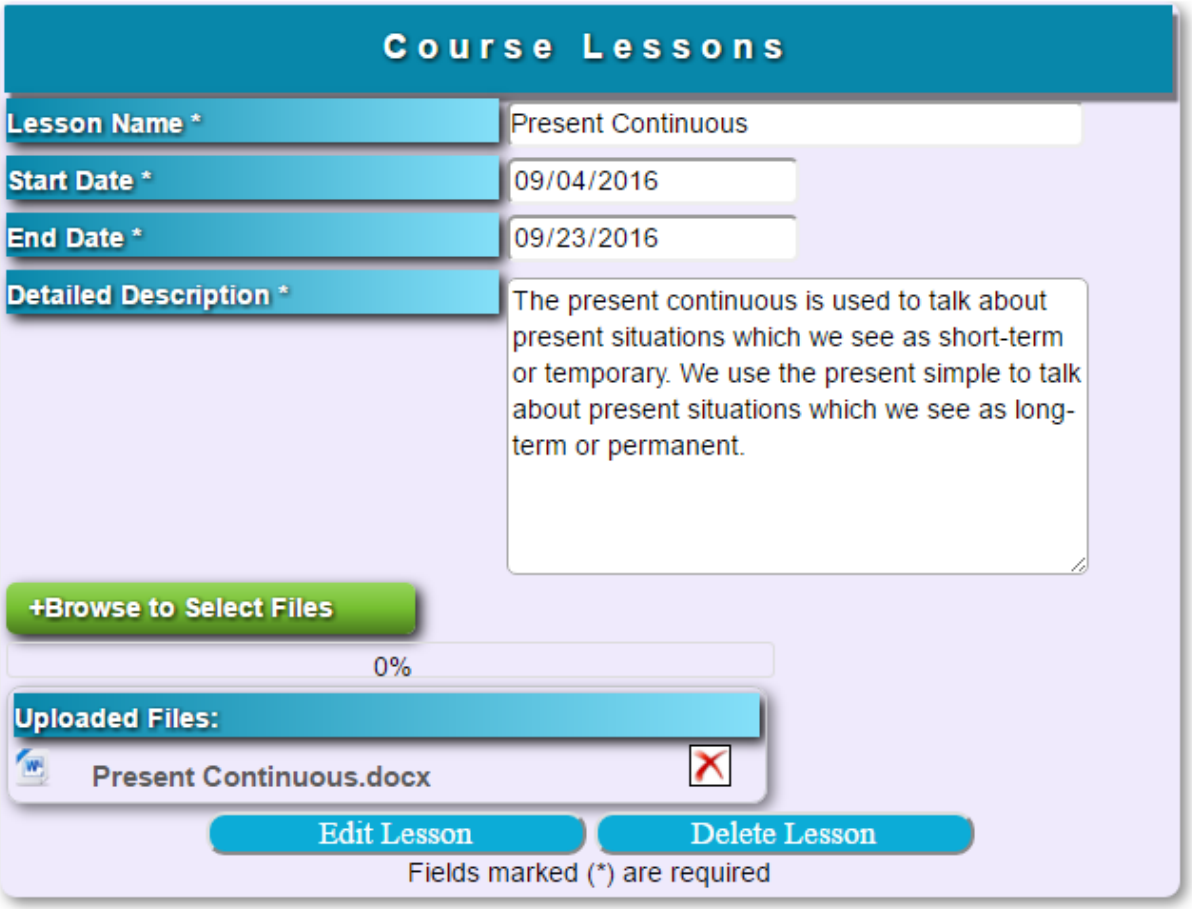


Select one of the lessons from the lessons list on the left column. The system will display the Course Lesson form for you to manage the lesson as follows:

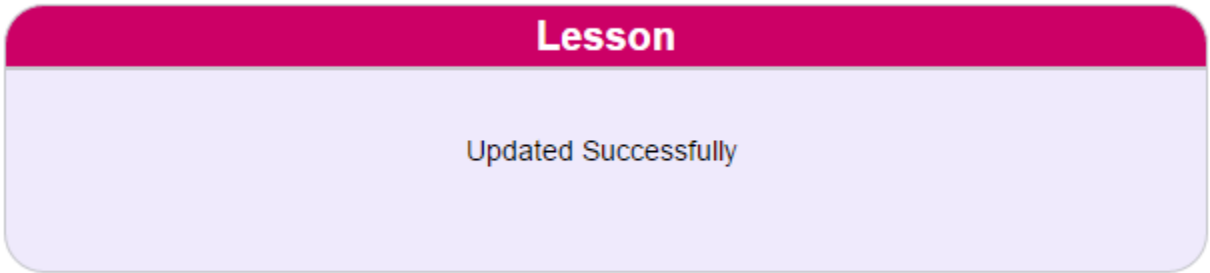


You can edit in the lessons fields, upload more files to be attached to the lesson, delete any files from the Uploaded Files list or even delete the whole lesson.

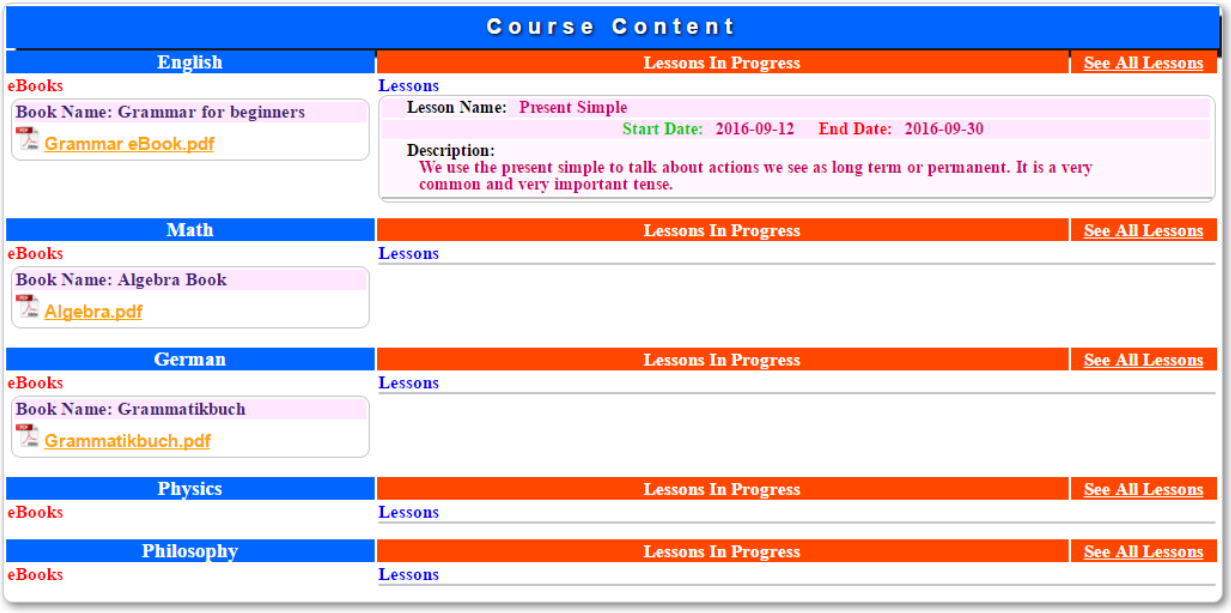
Let's for example edit in the end date of the lesson so that we make it disappear from the student portal "Lessons in Progress" tab. To do so, we need to shift the end date to a date before today's date. Let's make it September 23, 2016 as follows:



Click on Edit Lesson button to save the changes. The system will respond with the following confirmation message:



Now let's go to the Student Portal and see what happened to that lesson:



Notice that the lesson has disappeared from the "Lessons in Progress" tab since the lesson ended before today's date.

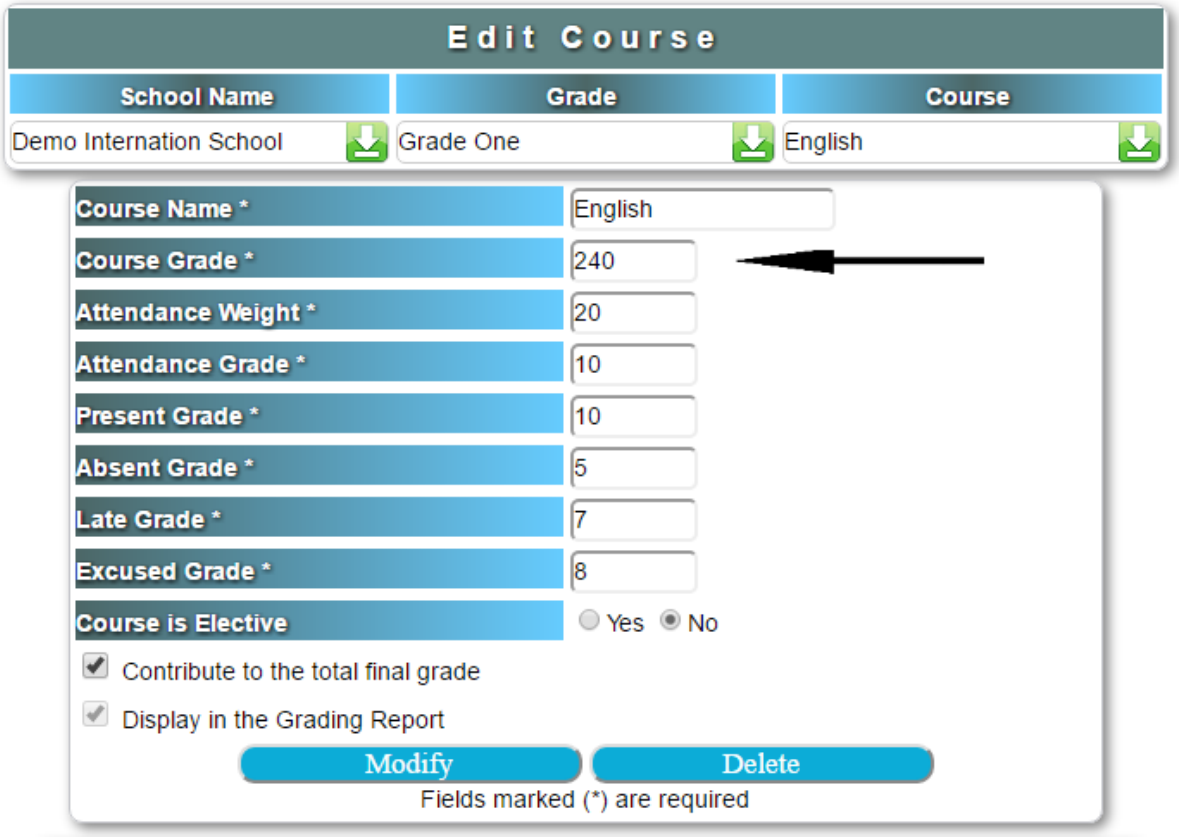
Assignment Category

The Assignment Category is the categorization of assignments that have the same nature.

For example, you can create assignment category for Home Work. In this case, every time you create a homework assignment you will create it under Home Work category.

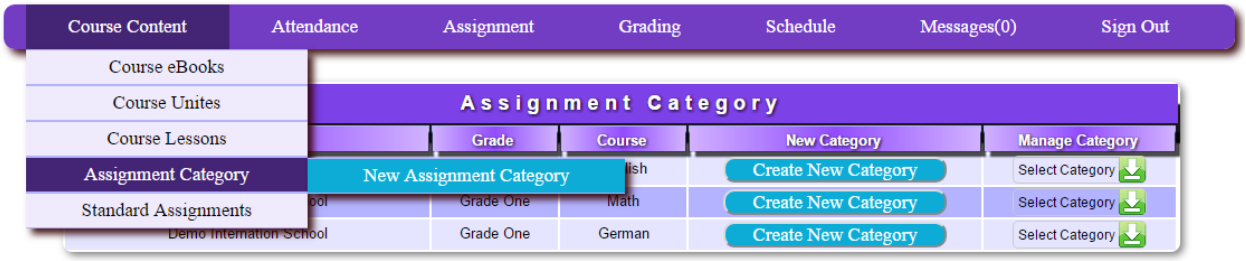
Each Assignment Category has a weight that determines the category impact on the course grading. For instance, if we have three assignments categories; one for homework with weight 1, one for classwork with weight 2 and one for quizzes with weight 3 then any assignment created under quizzes category will have 3 times the impact of the assignment created under homework category. Similarly, any assignment created under classwork category will have double the impact of the assignment created under homework category. Therefore, assuming we have three assignments with grade 10 each. One of these assignments is under the homework category and another one under classwork and the last one under quizzes. If the student was graded 9 out of 10 in the homework assignment, 8 out of 10 in the classwork assignment and 7 out of 10 in the quizzes then the following calculations will take place:

*As a reminder of **Course Grade** field, and before going into the calculations, we are showing below the screen when the Admin was creating the course profile:*

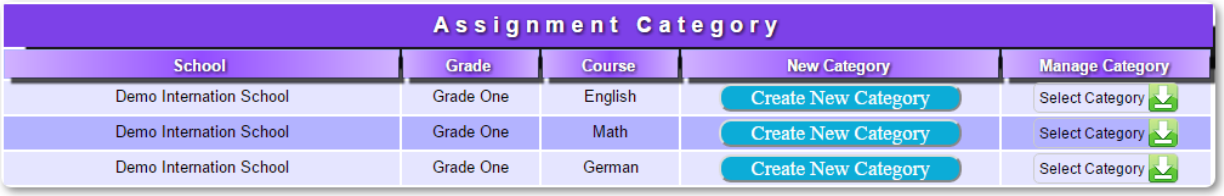


1. If the course grade is 240 (as shown in the screen above) and there are only these three categories (assume that there is no attendance grading or semester exams grading for now just for simplicity) then the 240 will be divided by the sum of all categories weights. That means 240 divided by (1+2+3). That gives 40.
2. In homework, 9 out of 10 equal 90%. Then 0.9 will be multiplied by 40 multiplied by 1 (the weight of the homework assignment category). That gives 36
3. In classwork, 8 out of 10 equal 80%. Then 0.8 will be multiplied by 40 multiplied by 2 (the weight of the classwork assignment category). That is (0.8*40*2 = 64)
4. In quizzes, 7 out of 10 equal 70%. Then 0.7 will be multiplied by 40 multiplied by 3 (the weight of the quizzes assignment category). That is (0.7*40*3 = 84)
5. Now let's add the results altogether. That is 36 + 64 + 84 = 184
6. Finally, divide 184 by the course grade (240). That is 184 over 240 = 0.76
7. That means the student course grade percentage is now 76%

In order to create new Assignment Category, go to Course Content > Assignment Category > New Assignment Category as follows:

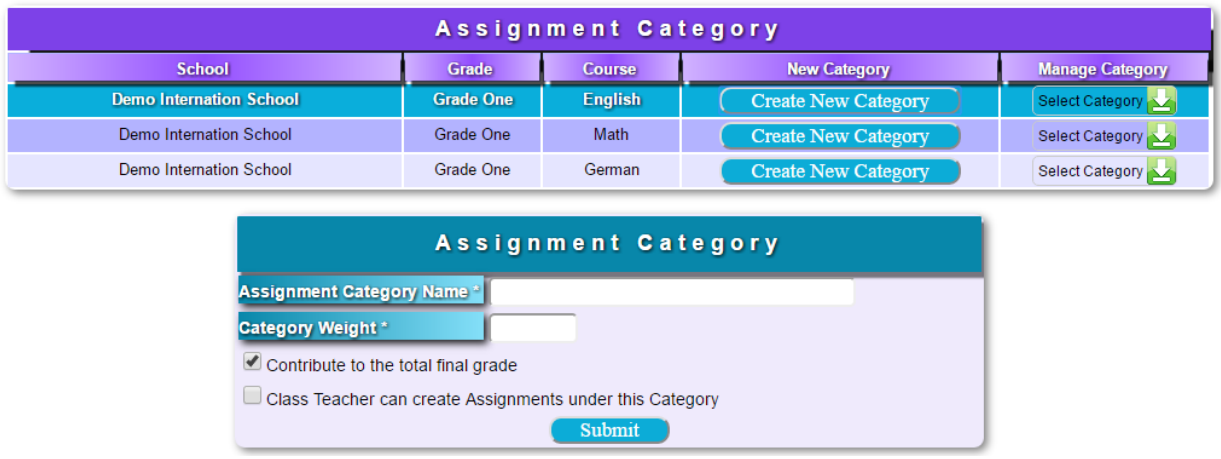


You will get the following Assignment Category table:



To create new assignment category, click Create New Category button.

The system will display the following form:

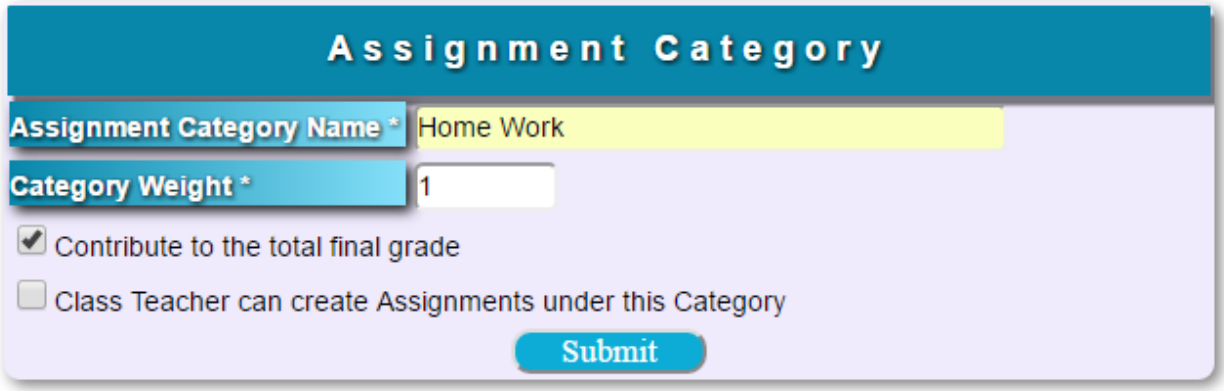


You need to enter the Assignment Category Name and the Category Weight.

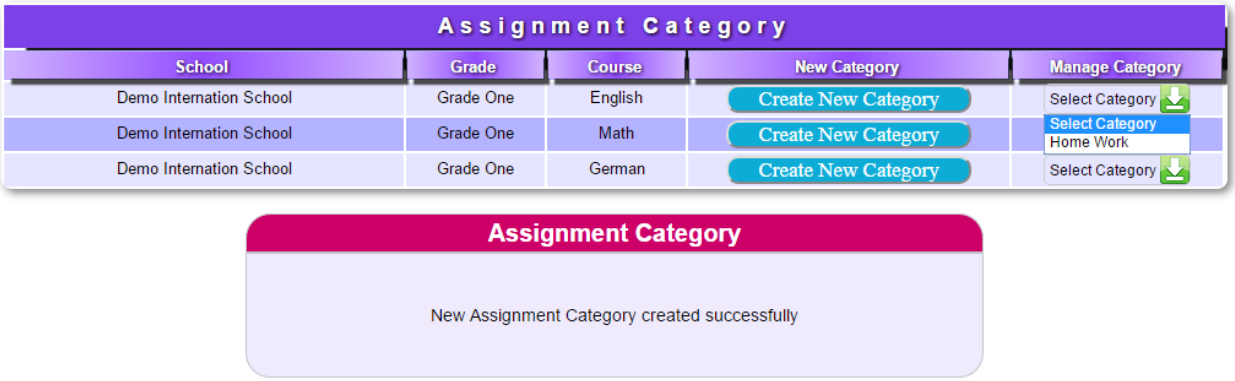
You also have the checkbox "Contribute to the total grade" which determines whether this category will contribute to the total final grade. This checkbox is checked by default. If you uncheck it, then any assignments created under this category will not have any impact on the course grading.

You also have another checkbox for "Class Teacher can create Assignments under this Category" which is not checked by default. It means that the default is not to allow class teachers to create non-standard assignments under this category and only the content teachers will be allowed to create standard assignments under this category. If you check this checkbox, then you will allow class teachers to create non-standard assignments under this category. We have explained earlier the difference between standard and non-standard assignments.

Let's create Home Work Assignment Category as follows:

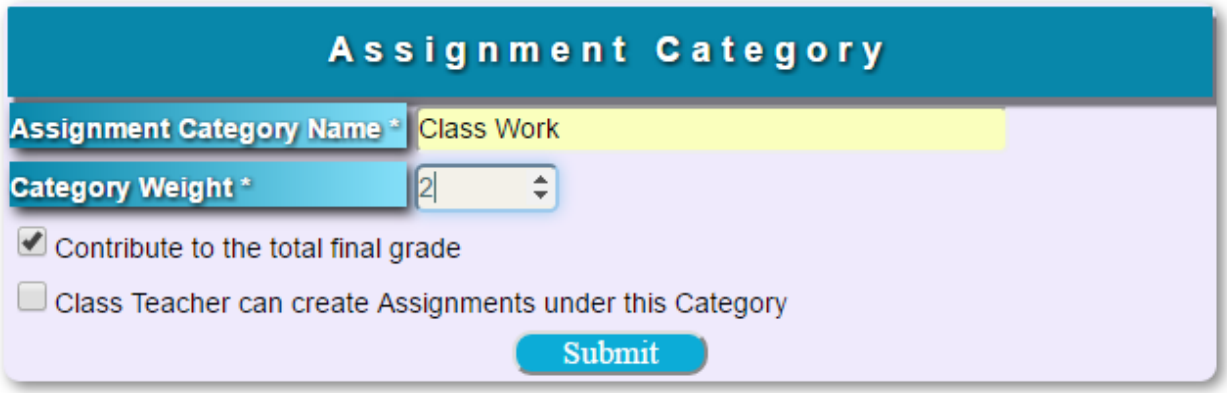


Click on Submit button and the system will respond with the following confirmation message:

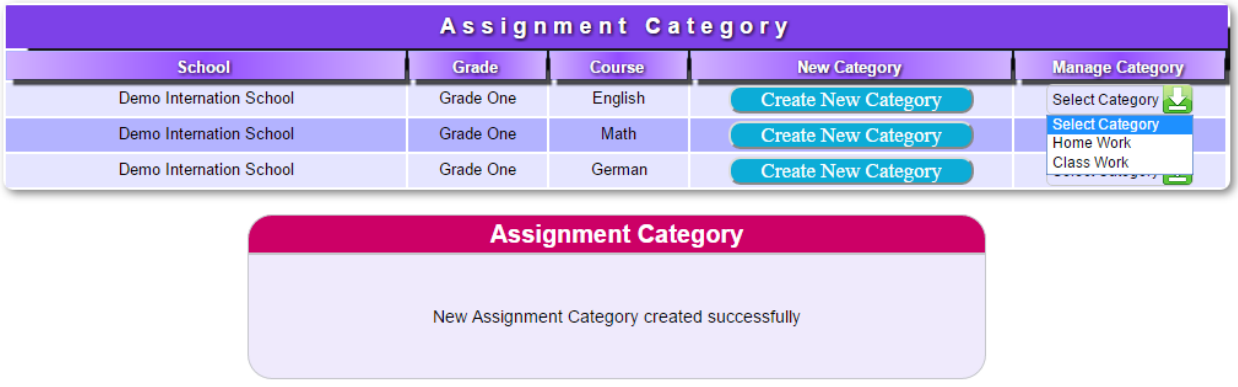


In the same time, if you open the drop down list under "Manage Category" tab, you will have the newly created category in the list as shown above.

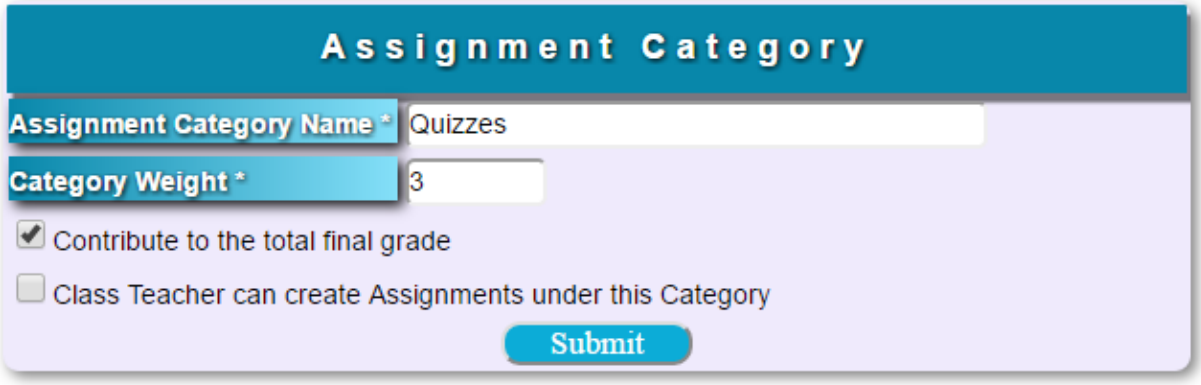
Let's create the Class Work category as follows:



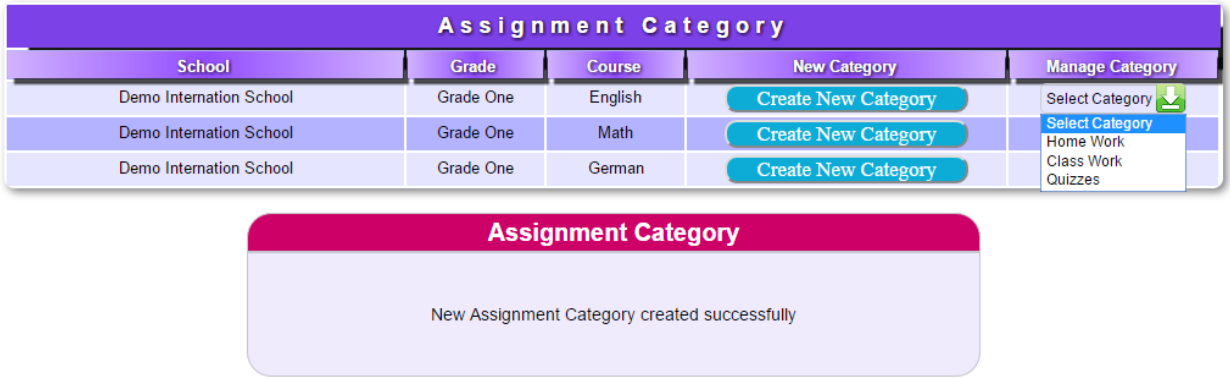
You will see the Class Work category added to the list as below:



And another one for Quizzes:



And you will see the Quizzes category added to the list as below:



If you would like to create a separate category for class teachers to give them the freedom to create their own "non-standard" assignment while restricting the impact of these assignments on the course grading, you can create a special assignment category, for instance, "Teacher Assignments" or "miscellaneous Assignments" …etc. and give it the weight you feel is fair compared to other categories weights. This way, the class teachers can create whatever assignments they need, yet, the category weight will determine the impact of such assignments on overall course grading.

Assignments

We will recall what have discussed before about the assignments as below:

“Assignments can be standard and non-standard.

Standard Assignments are the assignments created by the content teacher who is authorized to create content for the specific course. Standard Assignments cannot be edited or deleted by any teacher who does not have content authority for the course that contains this assignment. Standard Assignment also can be shared between all class teachers who have class authority to teach the course that contains this assignment. We call it Standard because we believe that these assignments are coming with the course curriculum to be given to all students without differentiation. They will also be having same “maximum possible points” so that when the students are graded on that assignment they will be fairly evaluated since the maximum grading is the same.

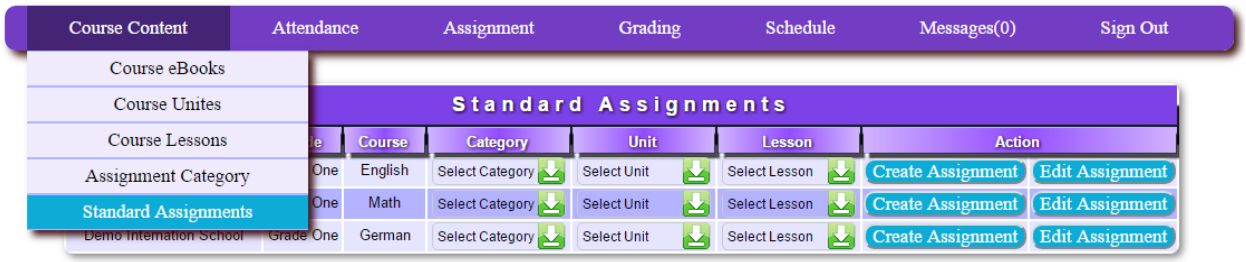
On the other hand, the system provides another type of assignments called non-standard assignments. These assignments are Class Teacher tailored assignments which mean they are created by each teacher in her/his class(s) and cannot be shared with other teachers. This is given as a sort of flexibility to allow teachers to create their own assignments and make their own evaluation on some specific aspects they might think not fully covered by the standard assignments. The non-standard assignments have their own grading points based on the judgment of each teacher who creates the assignments and this teacher is the only one who can edit or delete these assignments.”

Standard Assignments

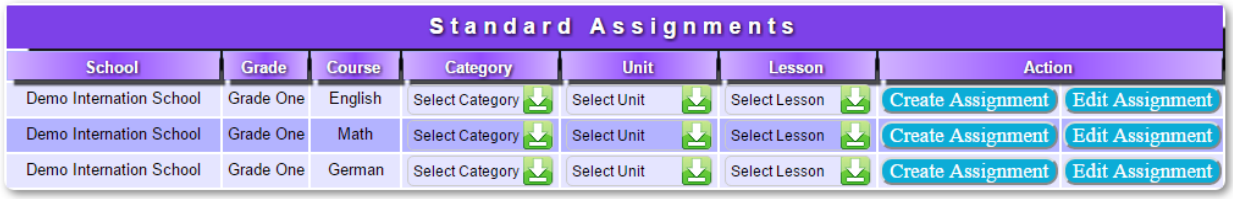
As discussed, the standard assignments are the assignments created by the content teachers. Class teachers are not authorized to create standard assignments.

Create Assignment

To create new standard, go to Course Content > Standard Assignment as follows:



The following standard Assignments table will be displayed:



In this table, you have School, Grade and Course as per the Content Teacher Authority list created by the Admin.

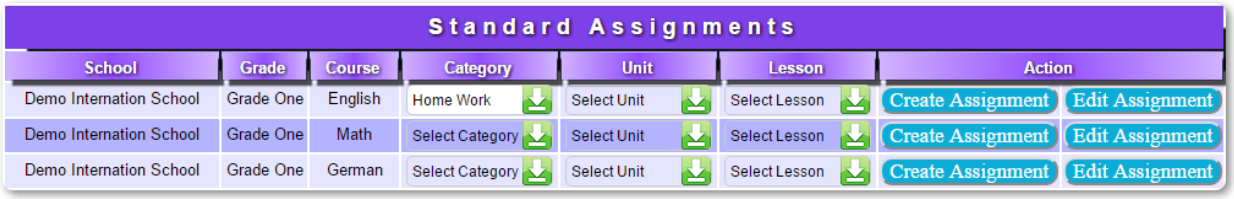
You have also three columns; one for Category and one for Unit and one for Lesson.

To create the assignment, you must choose the category under which this assignment will be created.

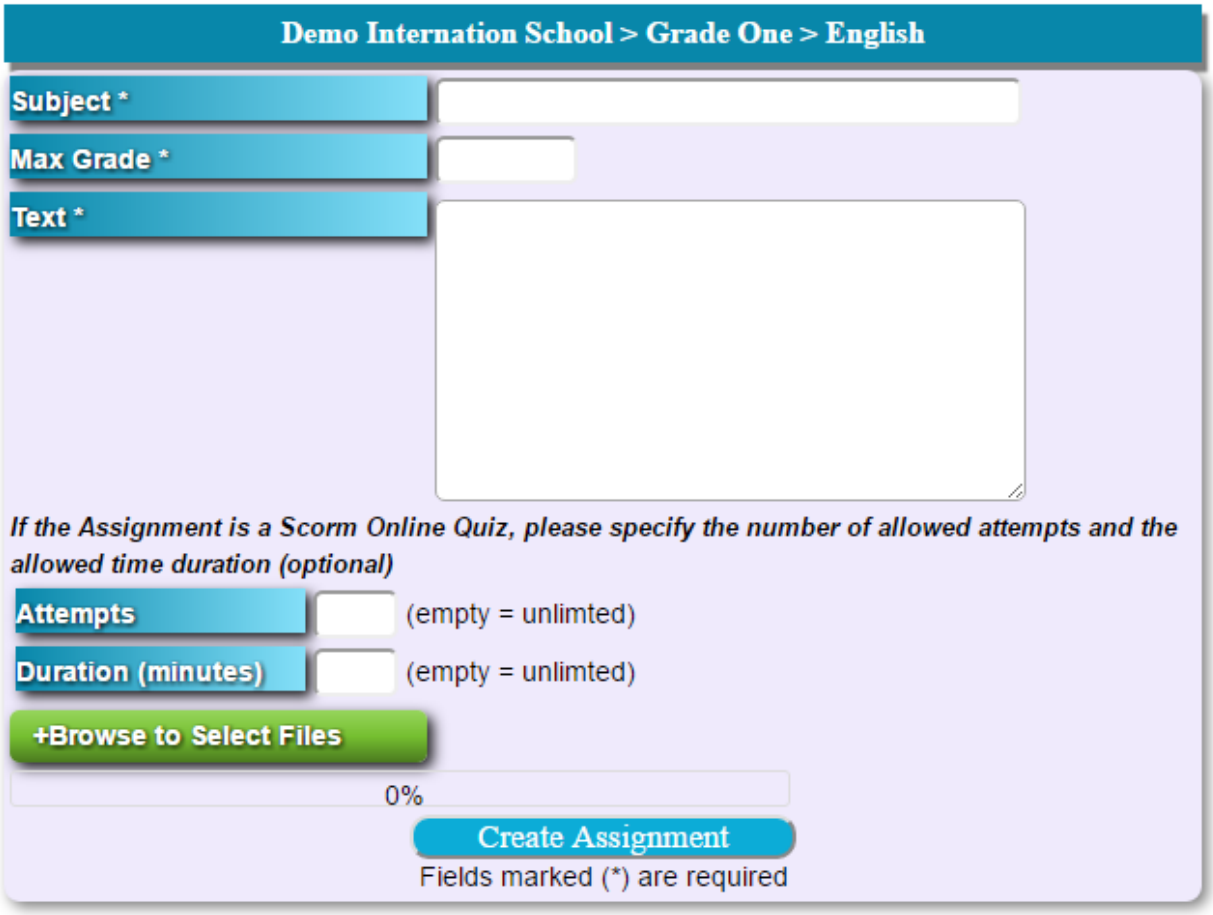
If you would like to link the assignment to a certain lesson, you will need to choose the unit from the Units drop down list and then choose the lesson from the Lessons drop down list. If you don't want to link the assignments to any lesson then just leave the units and lessons drop down list without any selection. In this case, the assignment will be linked directly to the course under the selected course category.

Let's first create a standard assignment which is not linked to any lesson.

We will select Home Work category from the Category drop down list next to the English course as shown below:



Then click Create Assignment. The system will display the Assignment form as below:

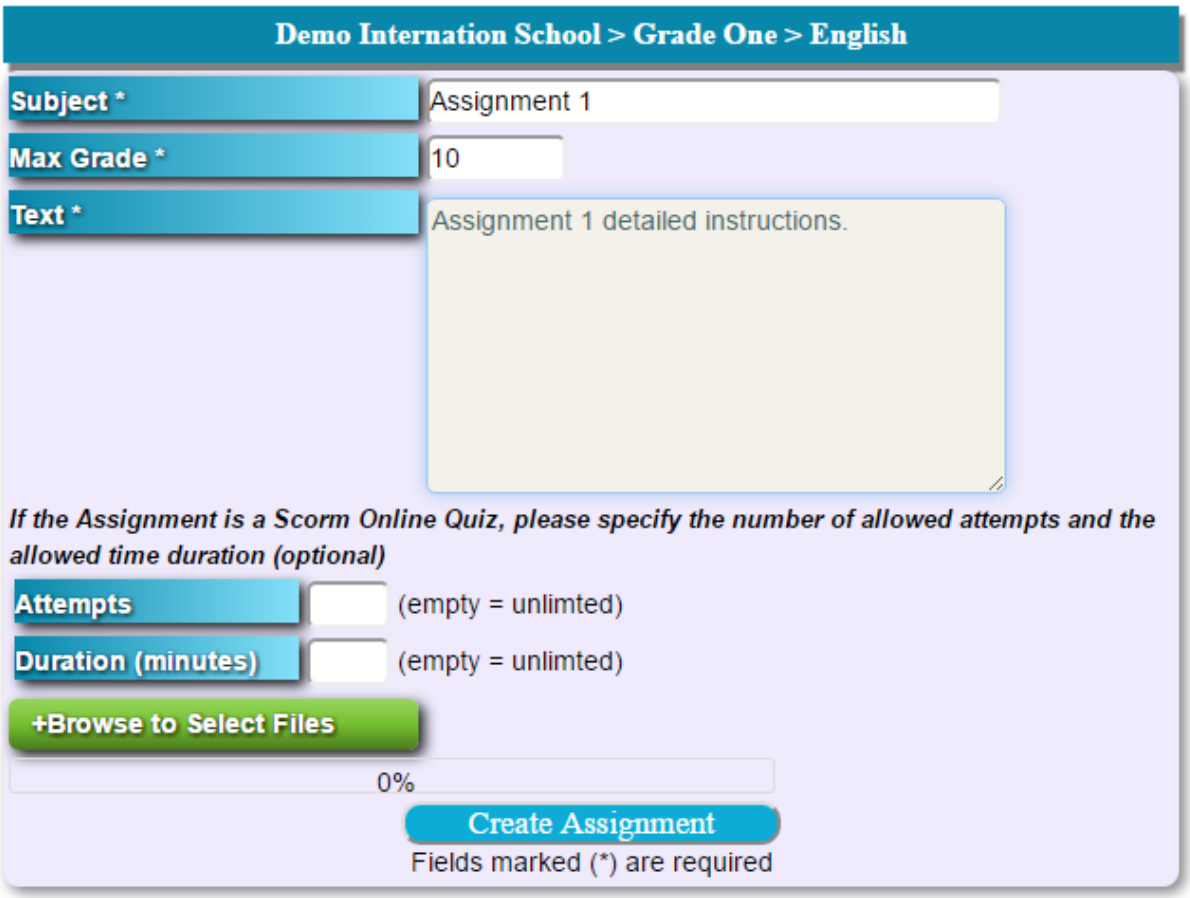


From the form above, there is a field for the subject, another on for Max Grade and another one for Text.

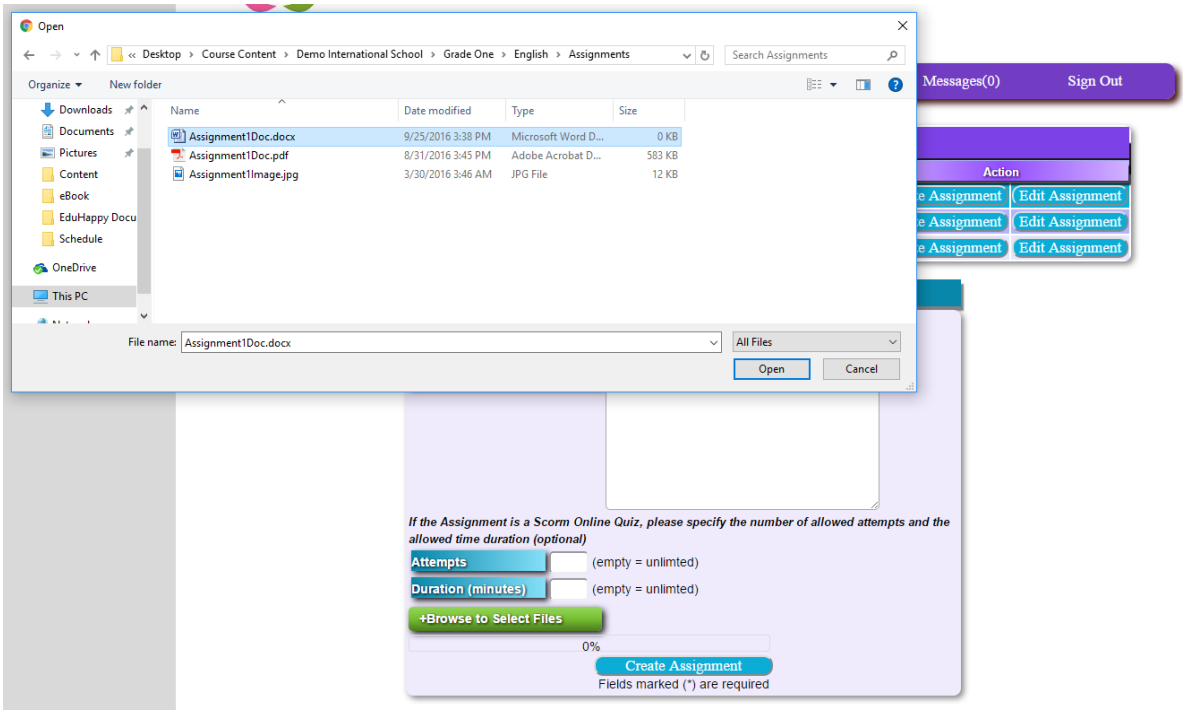
You can notice two more fields called Attempts and Duration. These two fields are related to what we call Scorm Online Quiz. Leave these two fields for now as we will discuss Online Quizzes in details a separate section.

The subject is the name of the assignment. Max Grade is the maximum possible points that the student can achieve as a grade in that assignment. The Text field is the detailed description of the assignment that may contain the instructions that the teachers are communicating to the students to direct them to how to complete the assignment.

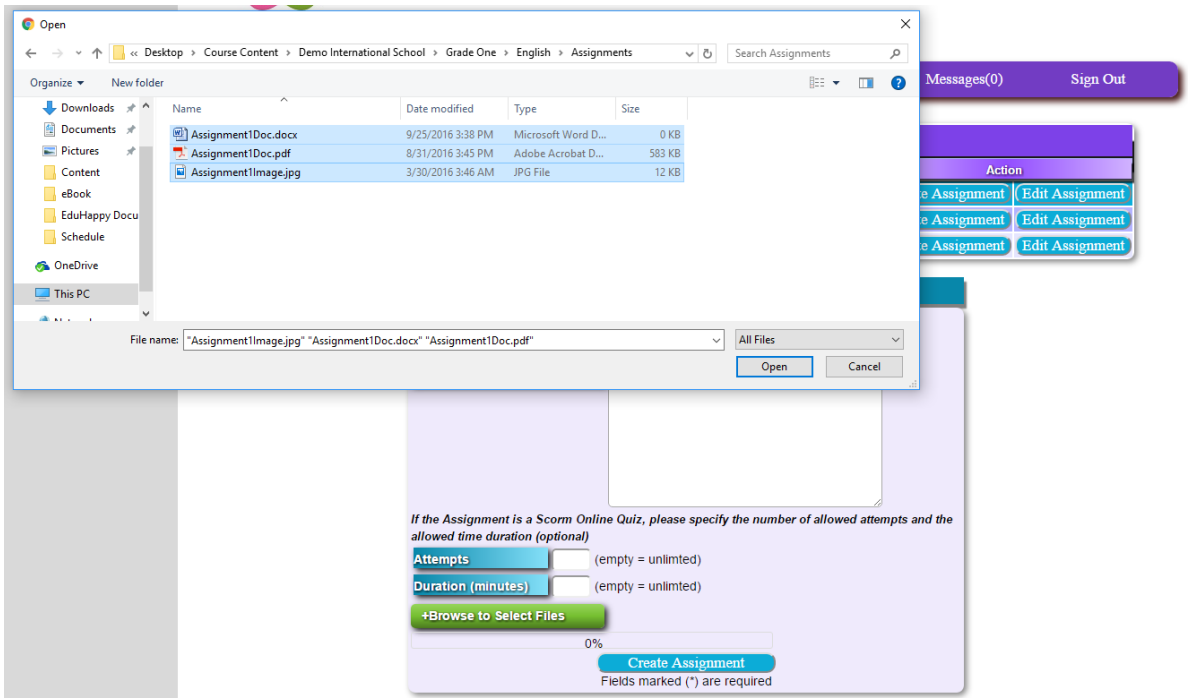
Fill in the fields as below:



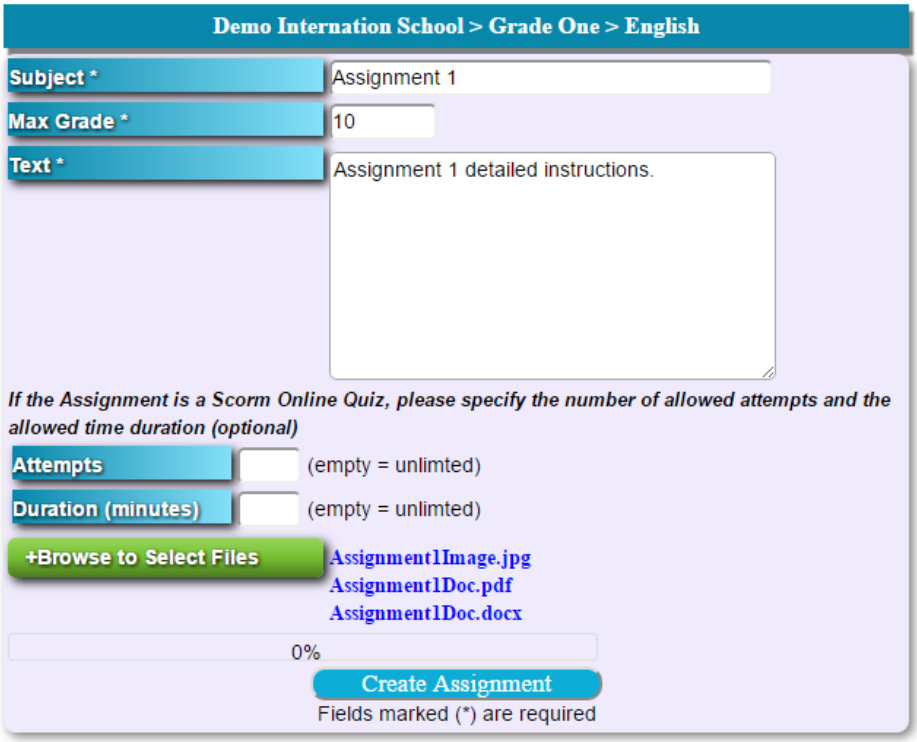
If you would like to upload a file or many files to be attached to the assignment, click on Browse to Select Files and choose the file(s) from you file system on your PC.



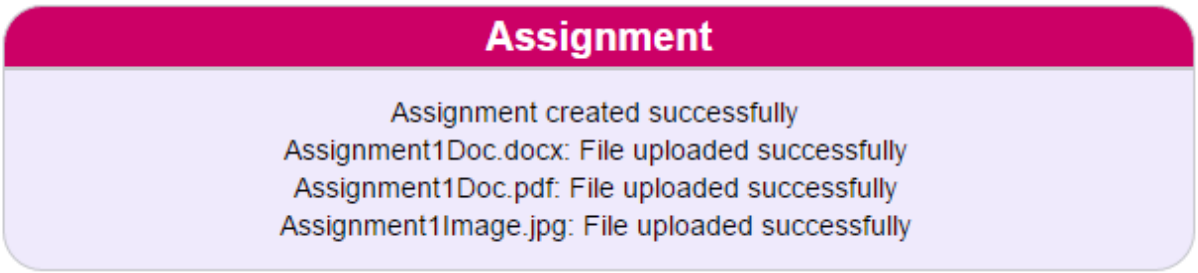
If you would like to upload many files at the same time, press Control button while selecting the files:



Click open when you finish selecting the files:

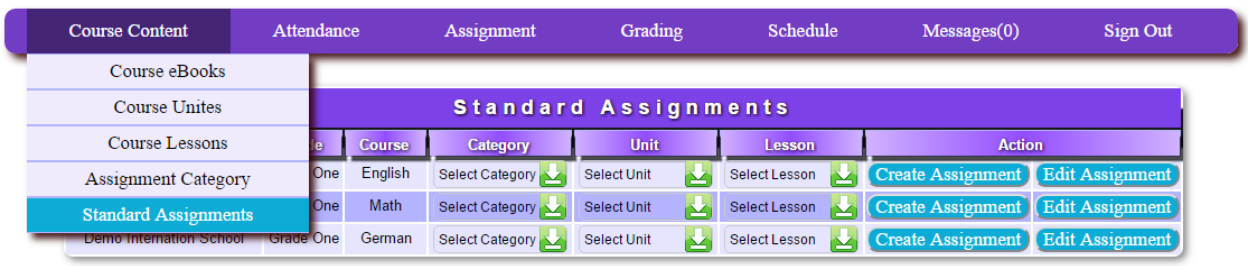


When finished, click on Create Assignment button to create the new standard assignment. The system will respond with the following confirmation message:

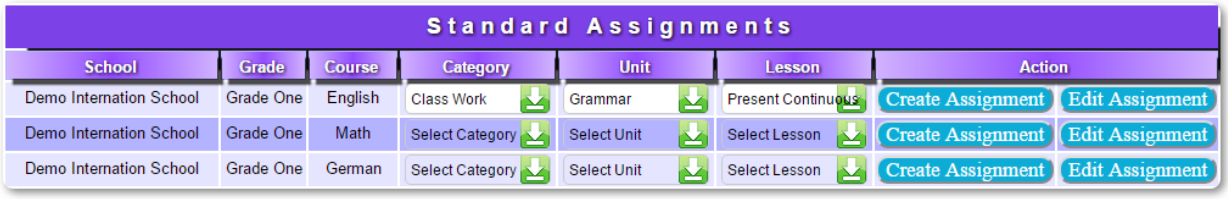


Let's create another assignment, but this time, we will link it to a lesson.

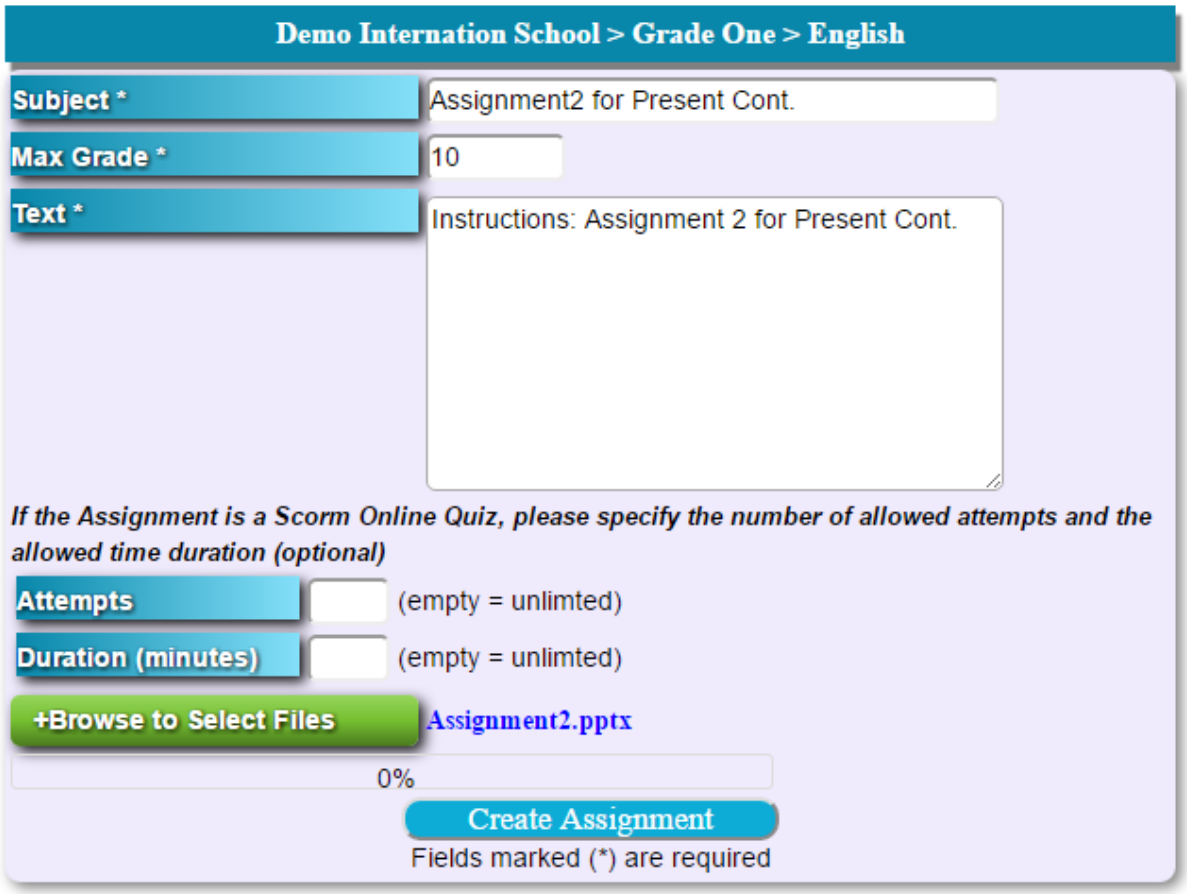
Go to Course Content > Standard Assignment:



Select “Class Work” from Assignment Category drop down list and then select “Grammar” from Unit drop down list and then select “Present Continuous” from Lesson drop down list as shown below:

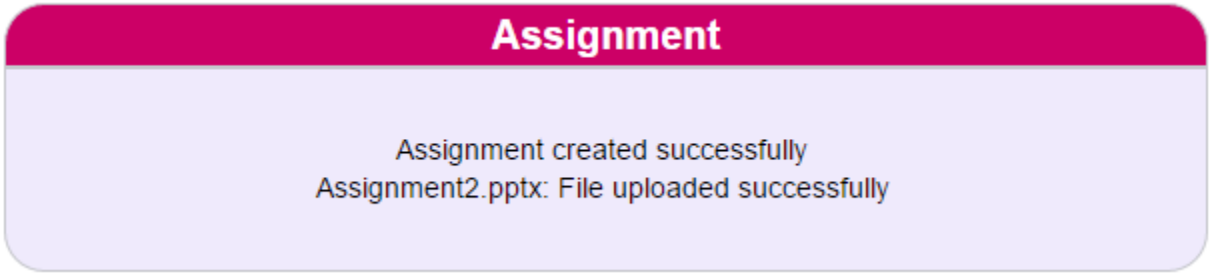


Click on Create Assignment button to get the Assignment form and fill in the form:



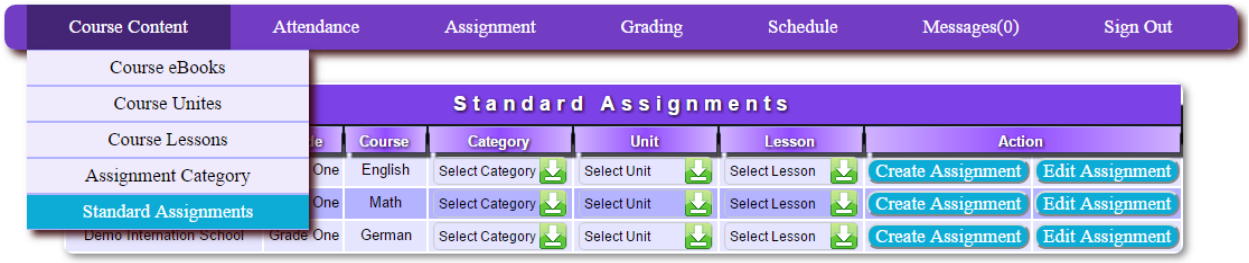
Click Create Assignment button to create the assignment and link it to the selected lesson.

The system will respond with the following confirmation message:

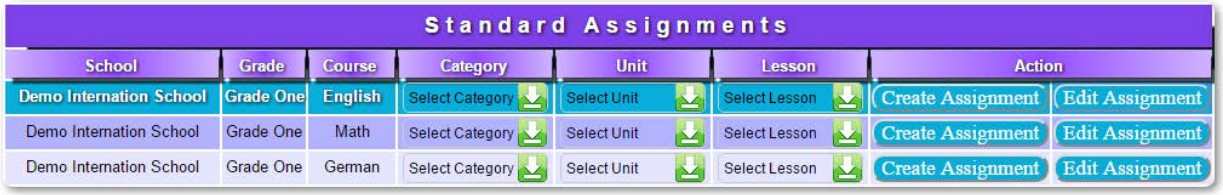


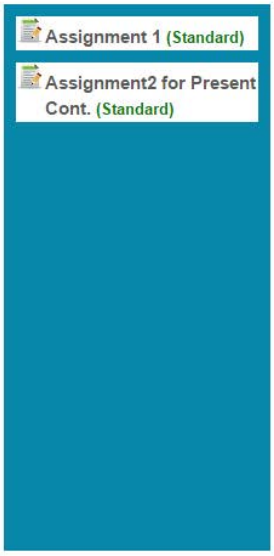
Edit Assignment

To edit the previously created assignments, you can go to Course Content > Standard Assignment as follows:



If you would like to list all the assignments related to a course, leave all drop down lists unselected and click on Edit Assignment button to list all the assignments:



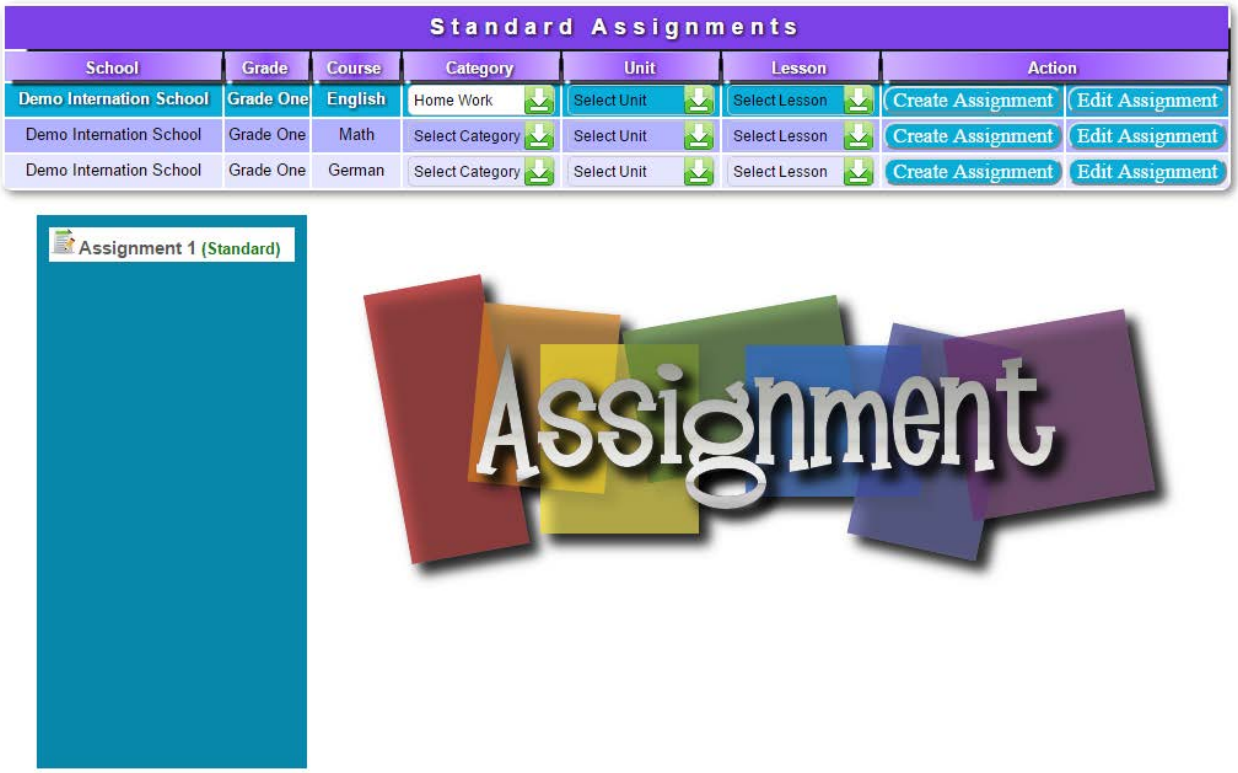


Note the word "Standard" in green color. This word only appears next to the standard assignments. When we discuss the non-standard assignments later on, you will notice that non-standard assignments will not have this word next to them.

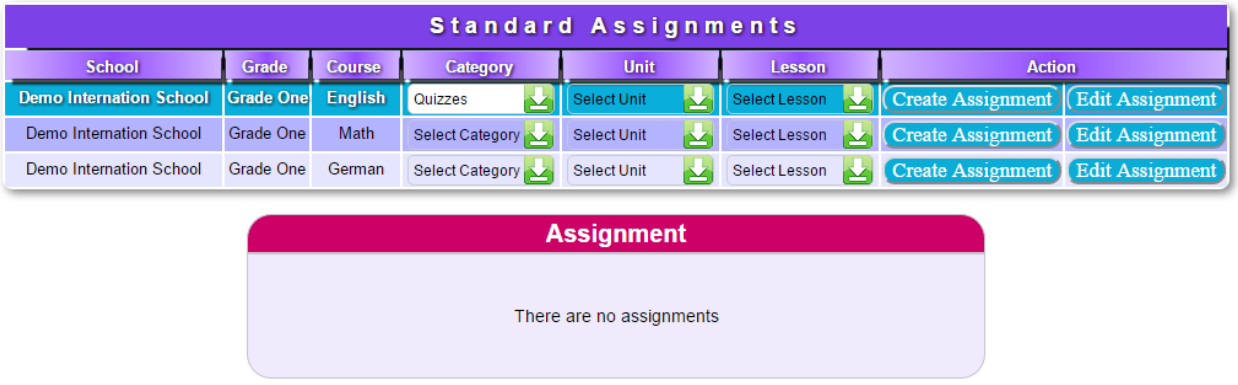
If you would like to list only the assignments that are related to a specific category, select the category from the Category drop down list and click Edit Assignment button. For example, select Class Work category as below:

You can see “Assignment 2 for Present Cont.” only is displayed.

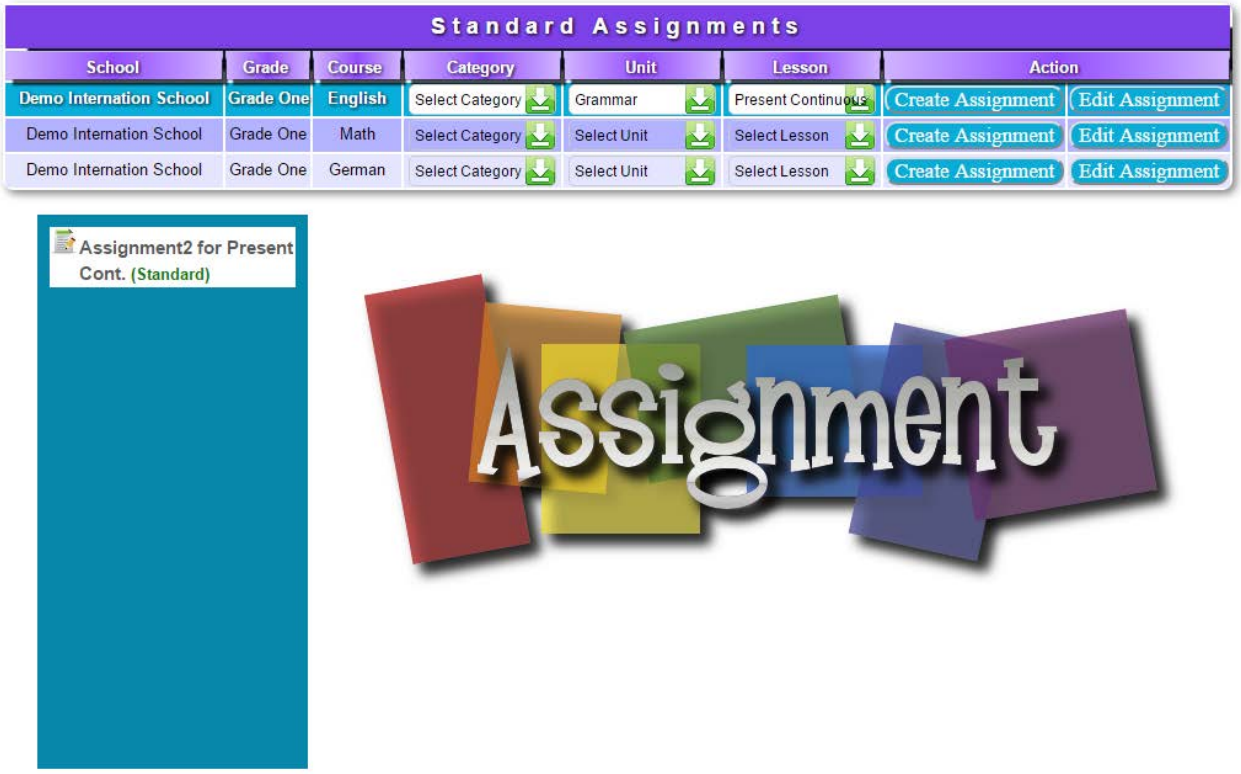
If we select another category, for instance, Home Work, you will get the assignments related to Home Work like below:



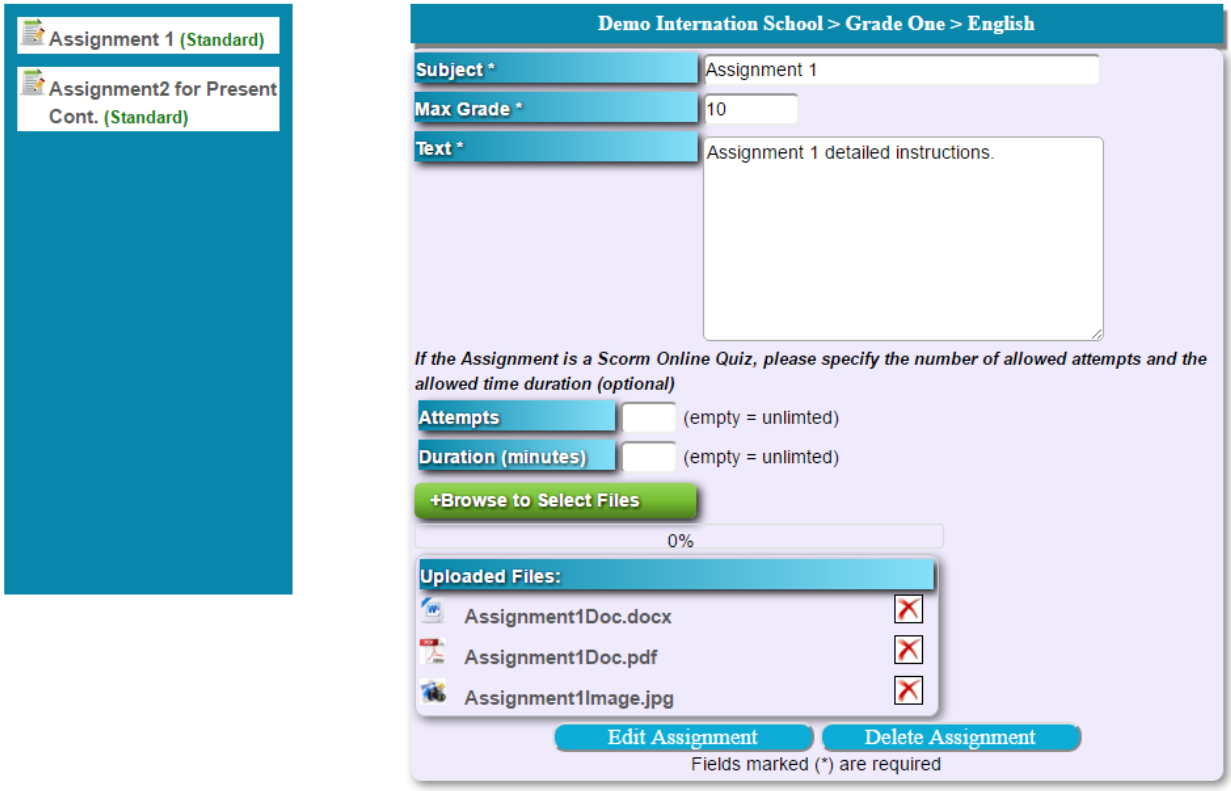
If the category you select does not have any assignments, for instance, Quizzes category, you will get the following message:



If you would like to list only the assignments that are related to a specific lesson, select the unit from the Unit drop down list then select the lesson from the Lesson drop down list like below:



Now since we have listed the assignments on the left column, we can select one of these assignments to start managing it as follows:



You can edit any of the assignments fields or you can upload more files to be attached to the assignment. If you would like to delete any of the uploaded assignment, click on the Red Cross button to delete the file permanently. Or if you need to delete the whole assignment, click on Delete Assignment button to delete the whole assignment completely and permanently from the system.

At this point, we have finished all aspects regarding the Content Teacher and all about the course content.

Give Assignment

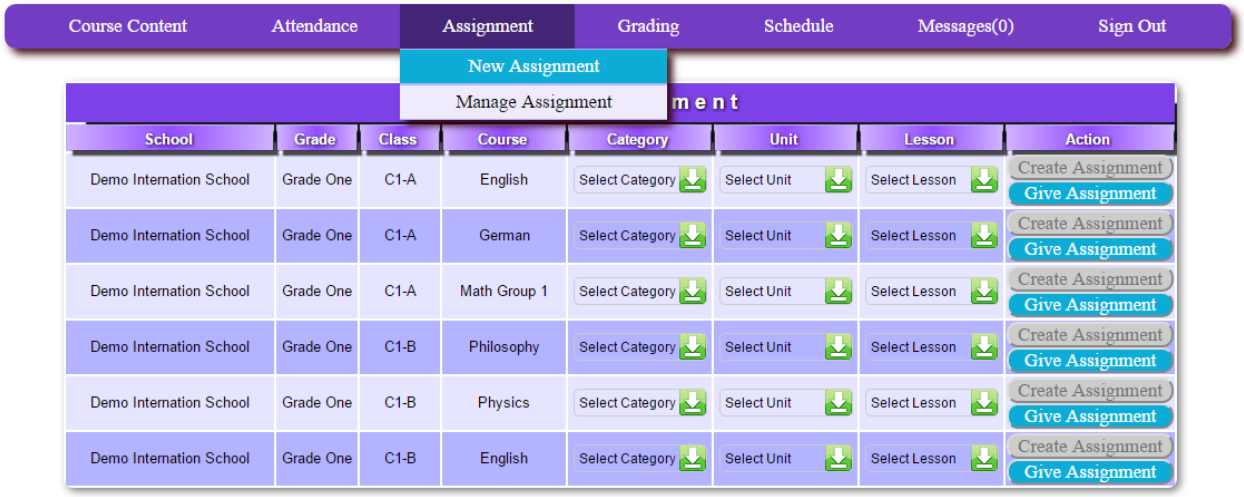
To continue with the standard assignment context and to complete the cycle, we would like to discuss how to "Give Assignment" and "Grade Assignment" and how this will impact the student assignments and grading in the Student Portal.

Give Assignment is the process of linking the assignment to a group of students, whether in a class or course group or may be an elective course, to direct them to complete a certain assignment within a specific timeframe.

When the content teacher created the standard assignment, she/he did that once in the lifetime of the course under a certain grade. It will remain there until the content teacher decides the otherwise. Consider this process as creating a centralized and shared pool of assignments or assignments bank from which the Class Teachers will pick an assignment to give to the student to complete in a certain timeframe. Therefore, there will be no need for the class teachers to create the assignment every time they need the students to take such an assignment and in the same time, this will standardize the assignment across all teachers without leaving it to them to create the assignment the way they like. Consequently, the result is that all the students will be taken the same assignment, even if they have different class teachers, and then they will eventually be fairly graded on the same assignment no matter the class they belong to and no matter the class teacher assigned to that class.

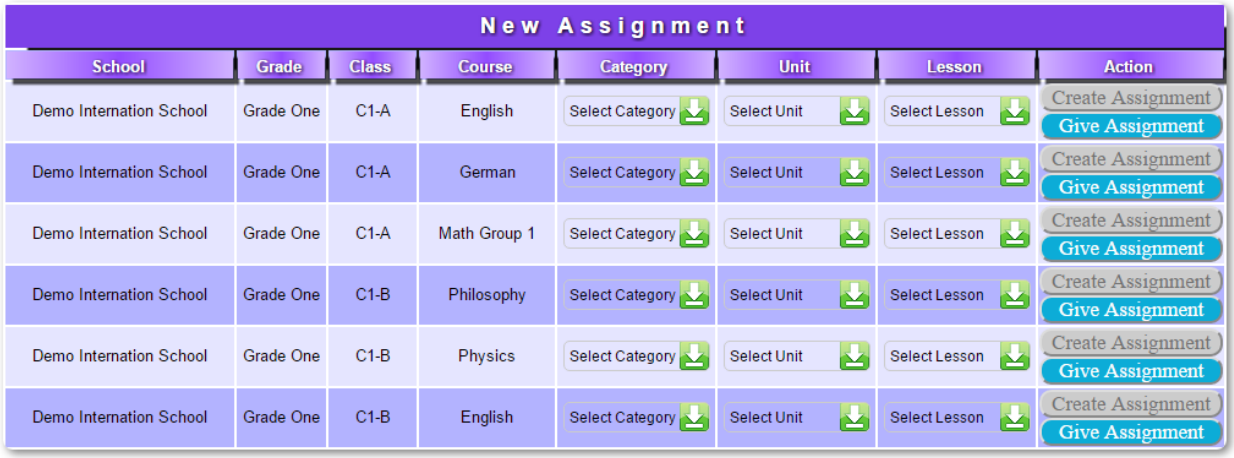
According to the above, the process of giving assignments starts by selecting the students and selecting the standard assignment and then giving it dates. That's it. The dated assignment will be automatically displayed to those students in the predefined dates.

To give an assignment, you must be a class teacher. Therefore, as a class teacher, go to Assignment > New Assignment as below:



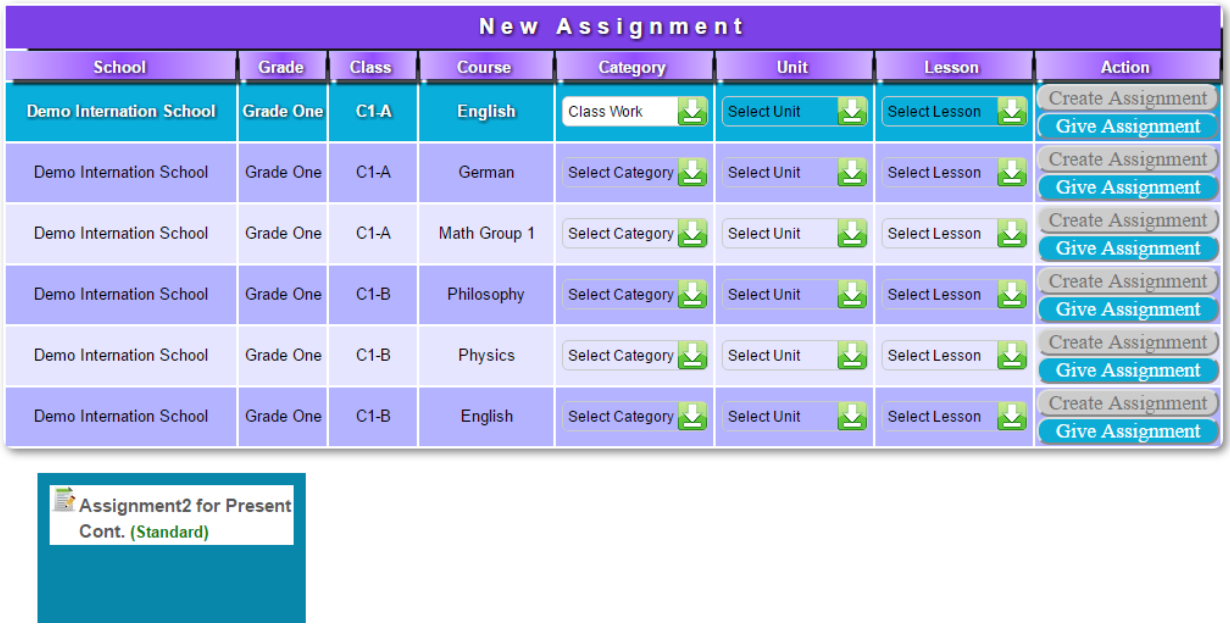
And as a class teacher, you will get the New Assignment table that contains the list of classes and courses based on the class authority list created for you by the school administration. In the same table, you will have lists of categories, units, and lessons to allow you to quickly access the assignment you want to give.

The screen below shows this table:

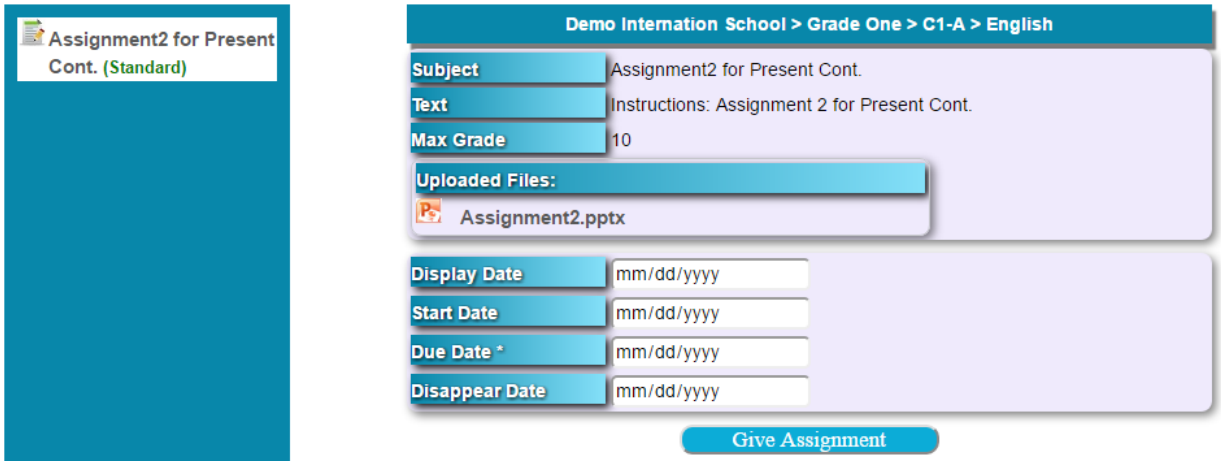


In order to access the list of all assignments related to the course you can click on Give Assignment button with selecting a category or a lesson but we don't recommend this action as this will retrieve a long list of assignments. Rather, select the category and / or the lesson under which you would like to list the assignments.

If the assignment you would like to give is under Class Work, then select Class Work category from the category drop down list and then click on Give Assignment button as follows:



Now you have the list of assignments related to Class work category. Click on the assignment from the left column and you will get the following form:

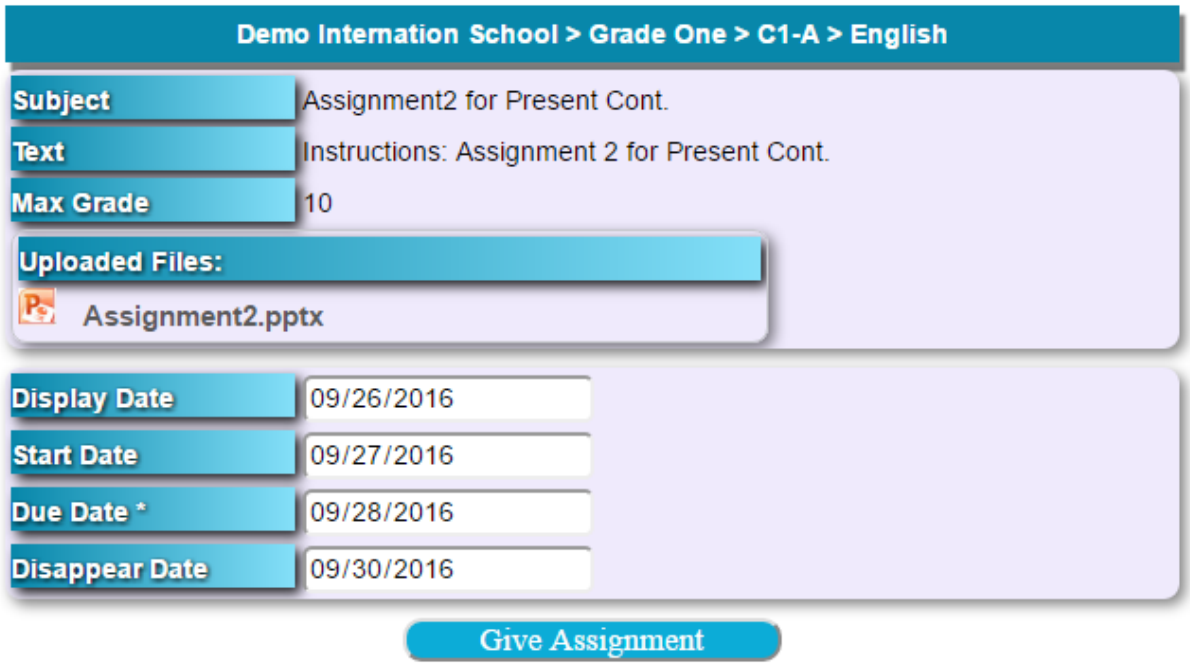


In that form, you have four dates; display, start, due, and disappear dates.

Display and Disappear dates are there to control when the assignment will be displayed in or disappeared from the student portal. Start date is to inform the students when they should start working on the assignment. Due date is the date that the students are required to deliver their completed assignments in order to be graded.

Note that only Due Date is required while other dates are optional. This is because not all the assignments are required to be displayed in the student portal. The class teacher will need the flexibility to give assignments in the class and complete the assignment in the class so that the students can be graded once they complete the assignments. In this case, there is no need for all the dates except for the due date which is mandatory in all cases and all conditions because it will determine the time frame of the assignment grading since this is required in the grading process to relate the grading marks to a specific school year and/or specific term.

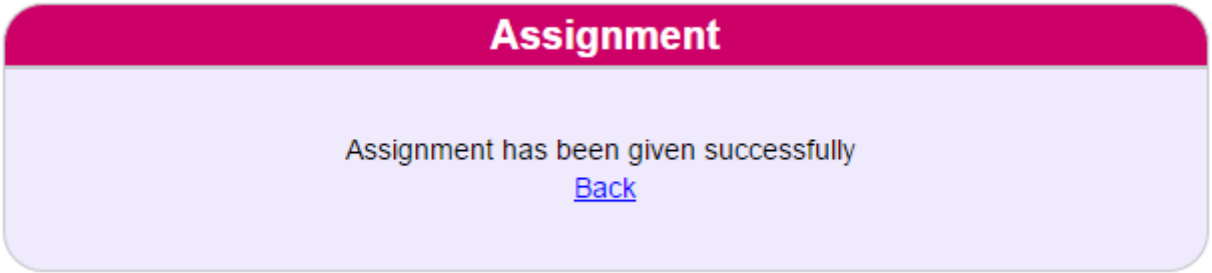
Let's put all the dates to see the impact from the student point of view in the student portal.



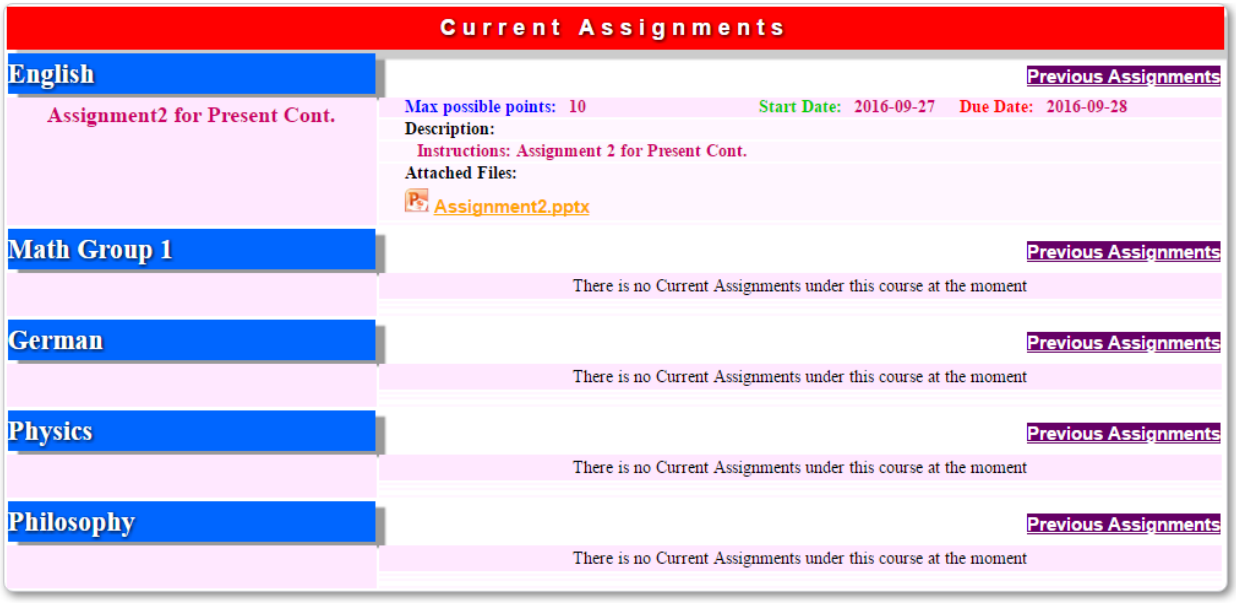
Important Rule:

Start Date must be greater than or equal to Display Date, Due Date must be greater than or equal to Start Date, Disappear Date must be greater than or equal to Due Date.

When finished, click on Give Assignment button to complete the process. The system will respond with the following confirmation message:



Let's now check the student portal. We will login with Student1 username and password and will go to Assignment page. This is what the student will see under Current Assignments:



Now the student can see all the assignment details and will start and finish the assignment and deliver it back to the teacher on the given due date.

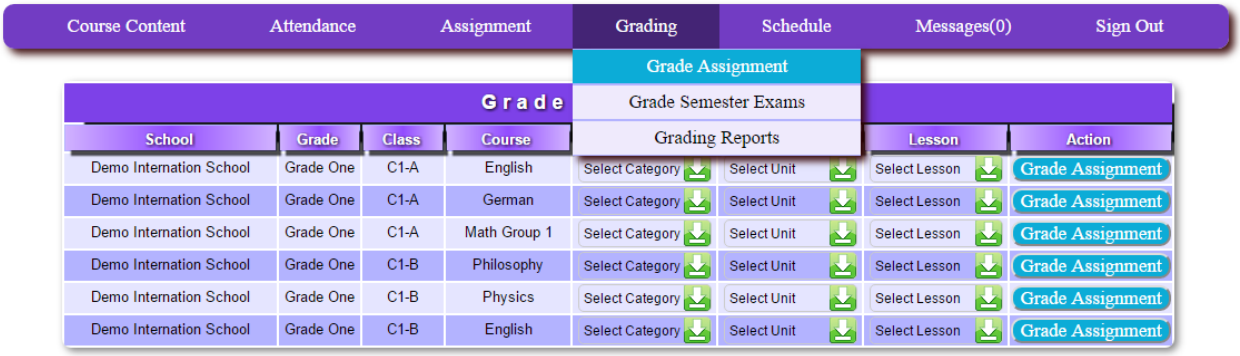
The class teacher will receive the assignment from the student and now would like to grade the student for that assignment. So let's move further to Grade Assignments.

Grade Assignment

Grading assignment means giving points to the students who were assigned to complete this assignment. Based on these points and based on the assignment grade (the maximum possible points), the student will be graded. For instance, if the assignment grade is 10 and if the student's points were 9 then the student grade in that assignment is 9 out of 10 which means 90% as a grading percentage.

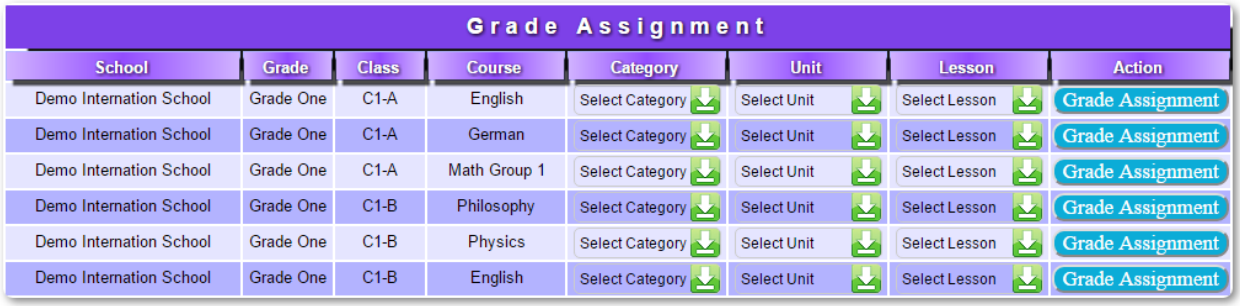
Within a certain category, the system will accumulate all the assignments grades for the student to calculate the category grade. For example, within Home Work category, if we have three assignments A1, A2 and A3 and if the student's grades were (A1: 3 out of 5), (A2: 8 out of 10) and (A3: 19 out of 20) then the system will add all the student's points together as follows: (3 for A1 + 8 for A2 + 19 for A3 = 30 points) and will add all the assignments grades together as follows: (5 for A1 + 10 for A2 + 20 for A3 = 35 points) and will divide the student's total points on the assignments total grades as follows (30 /35 = 0.857 or 85.7%). Therefore, the category grade will be rounded to 86%.

To grade an assignment you must be a class teacher. As a class teacher, go to Grading > Grade Assignment as follows:

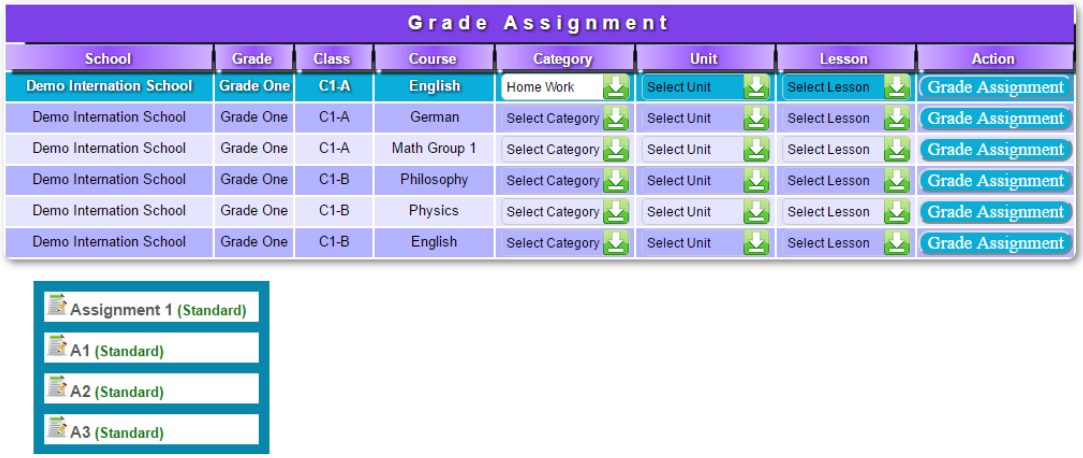


And as a class teacher, you will get the Grade Assignment table that contains the list of classes and courses based on the class authority list created for you by the school administration. In the same table, you will have lists of categories, units and lessons to allow you to quickly access the assignment you want to grade.

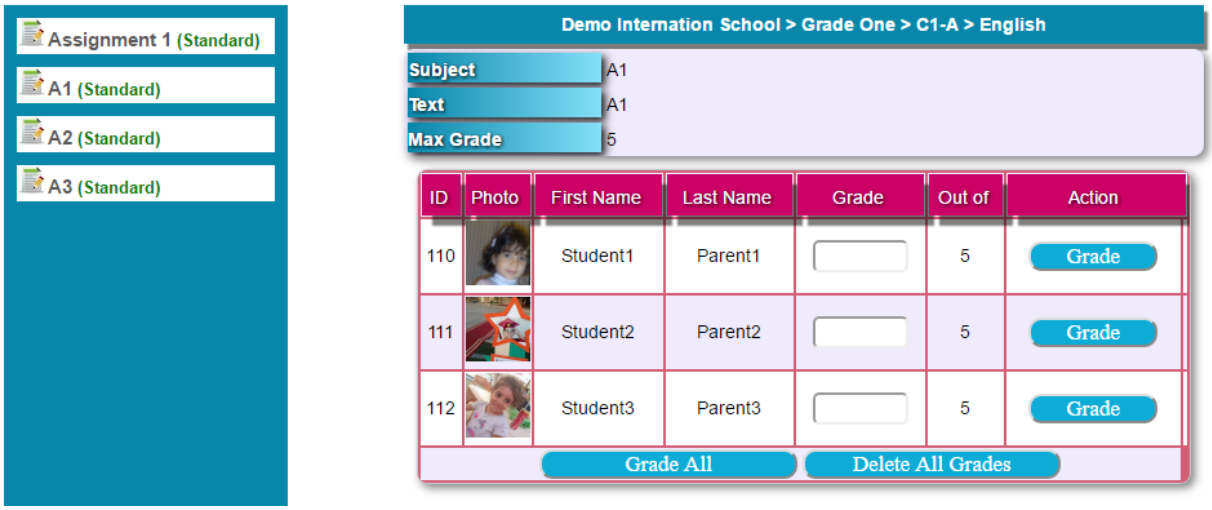
The screen below shows this table:



If the assignment you would like to give is under Home Work, then select Home Work category from the category drop down list and then click on Grade Assignment button as follows:

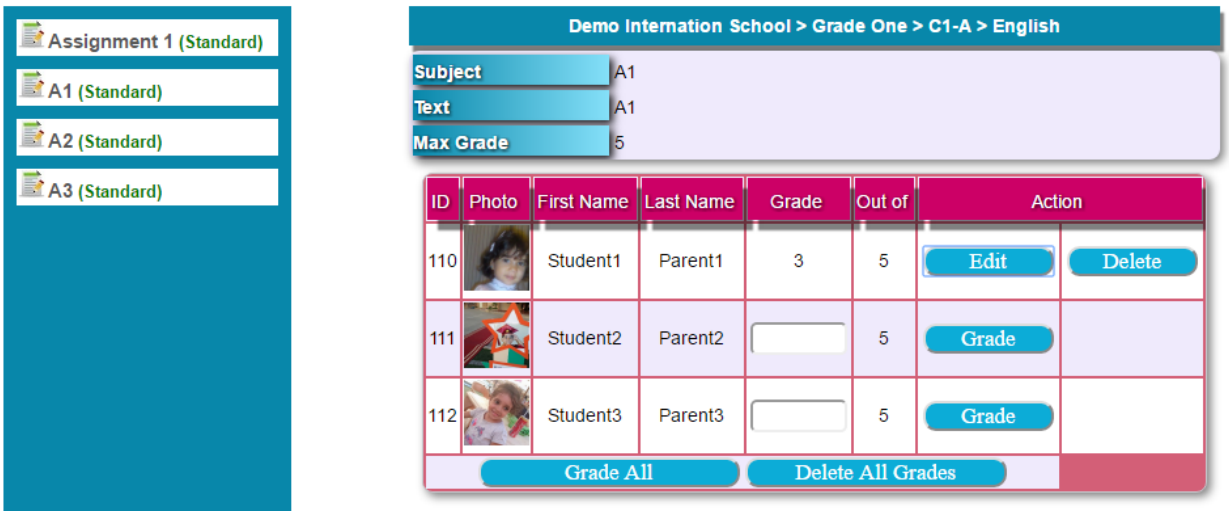


Now you have the list of assignments related to Home Work category. Click on A1 assignment from the left column and you will get the following form:



Let's grade Studen1. In our example, we will put 3 in the text box next to Student1 in the "Grade" column and then click Grade button.

The system will immediately grade the student and will display the student's points as follows:

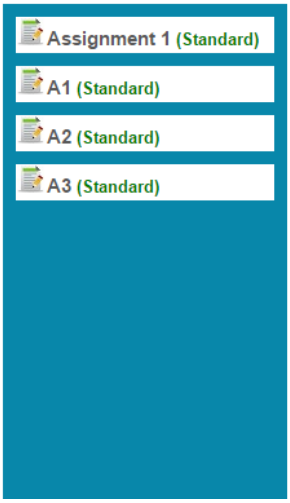


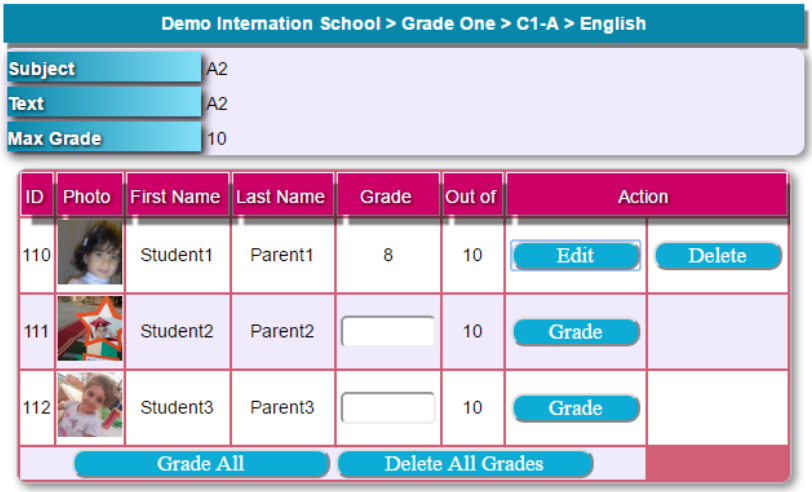
Notice the "Delete" button that is added and notice that Grade button change to "Edit" button. If you want to change the points you click Edit button and if you want to delete it click Delete button.

You can also grade all students at once by putting the grades next to each student and when finished click on Grade All button. If you would like to delete all the grades of all students at once, click on Delete All Grades.

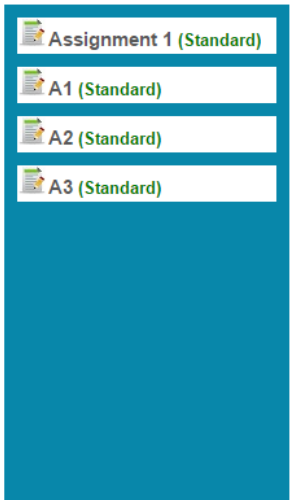
Now let's grade assignment A2 and A3 as well.

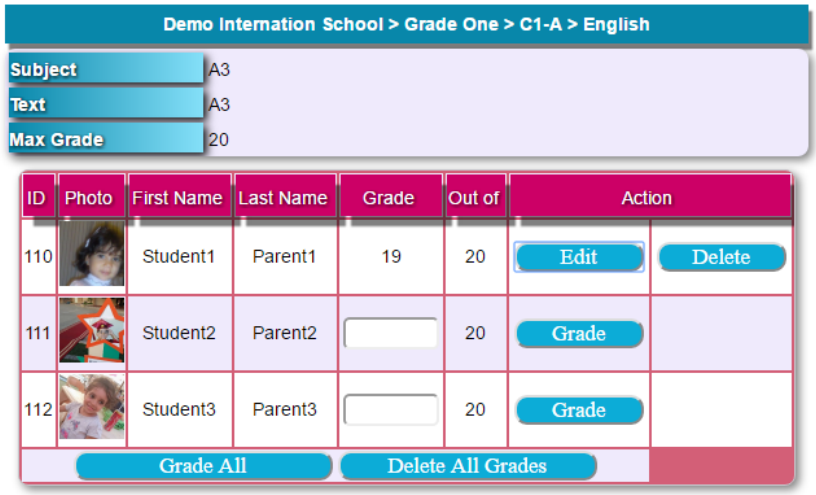
We'll grade Student1 8 out of 10 For A2:





And 19 out of 20 for A3:

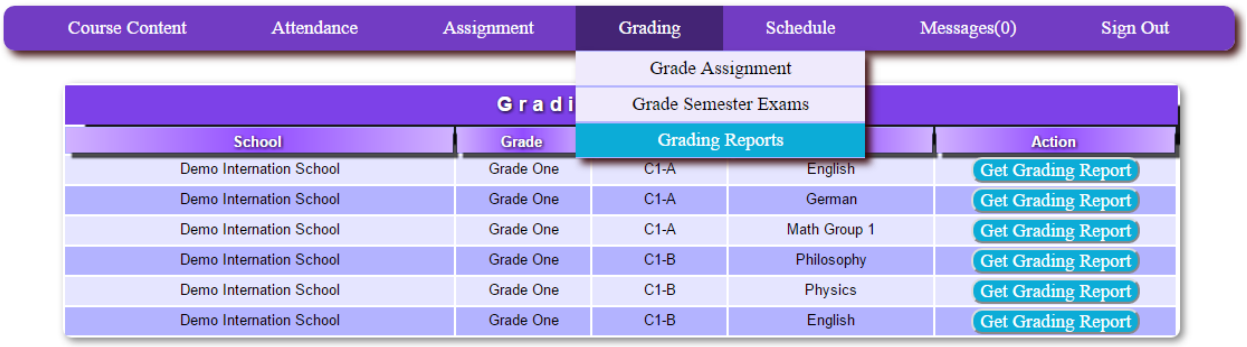




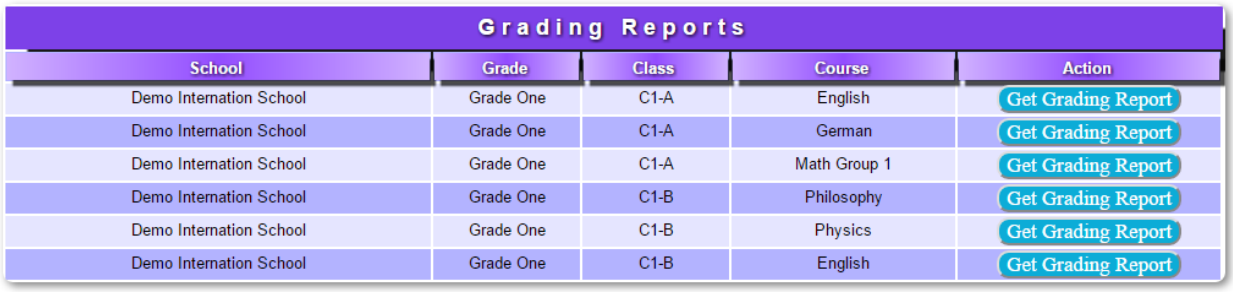
Since we have graded all the tree assignments A1, A2 and A3, let's have a look on the category grade to make sure it's now 86% as we have explained in our example.

Grading Reports

Go to Grading > Grading Reports as follows:



You will get the following Grading Reports table:



Since Student1 belongs to Demo International School > Grade One > C1-A and since the graded assignments A1, A2 and A3 belong to Home Work Category under English course, we will select the first row in the table and click on Get Grading Report.

The system then will display the following grading report:

Grading Reports

School	Grade	Class	Course	Action
Demo Internation School	Grade One	C1-A	English	Get Grading Report
Demo Internation School	Grade One	C1-A	German	Get Grading Report
Demo Internation School	Grade One	C1-A	Math Group 1	Get Grading Report
Demo Internation School	Grade One	C1-B	Philosophy	Get Grading Report
Demo Internation School	Grade One	C1-B	Physics	Get Grading Report
Demo Internation School	Grade One	C1-B	English	Get Grading Report

Demo Internation School > Grade One > C1-A > English

English Grading Report - Year 2016-2017

Course	GTerm 1		GSemester One Exam Grade		GSemester One		GTerm 2		GTerm 3		GSemester Two Exam Grade		GSemester Two		Final Year	
+ 110 Student1 Parent1	86%	-	-	-	-	-	-	-	-	-	-	-	-	-	86%	-
+ 111 Student2 Parent2	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-
+ 112 Student3 Parent3	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-

We will discuss the details of that report later in Grading Reports section. But for now, click on the plus (+) sign next to Student1 to expand and display the categories break down as shown below:

Demo Internation School > Grade One > C1-A > English

English Grading Report - Year 2016-2017

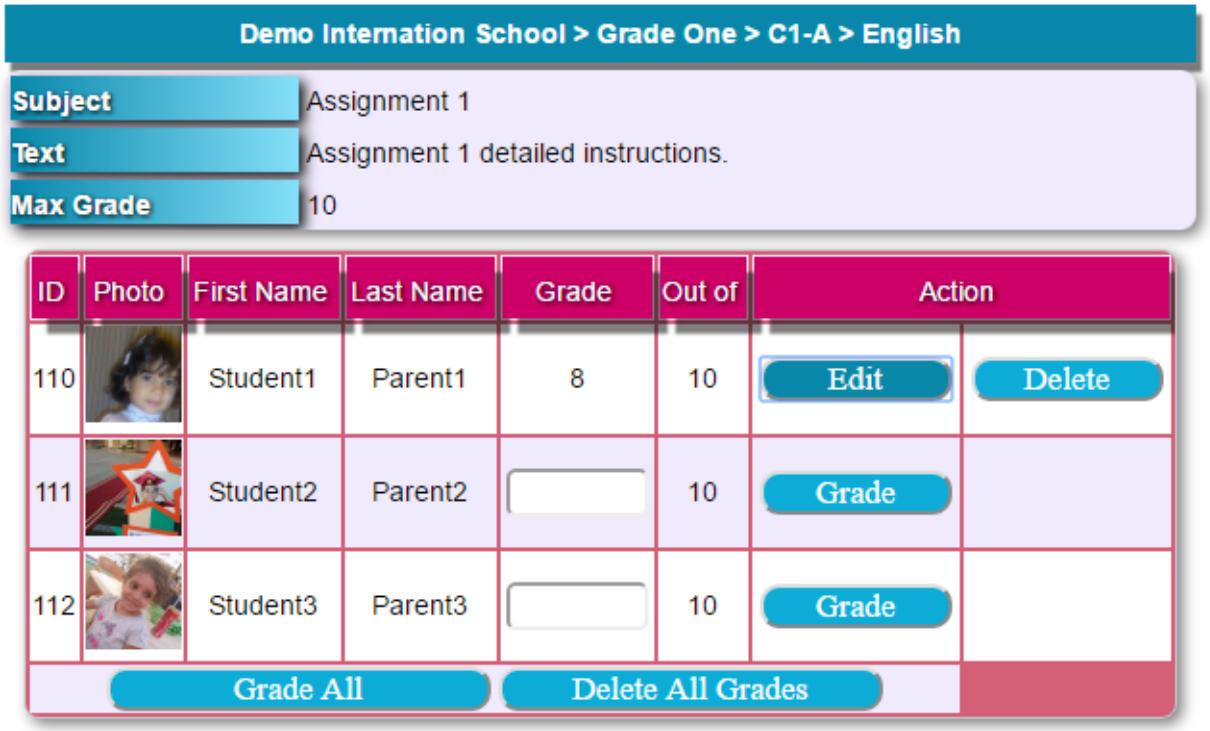
Course	GTerm 1		GSemester One Exam Grade		GSemester One		GTerm 2		GTerm 3		GSemester Two Exam Grade		GSemester Two		Final Year	
- 110 Student1 Parent1	86%	-	-	-	-	-	-	-	-	-	-	-	-	-	86%	-
Class Work -																
Home Work 86%																
Quizzes -																
Attendance -																
+ 111 Student2 Parent2	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-
+ 112 Student3 Parent3	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-

Notice that you have four items under Student1; three items for the Assignment Categories and one item for the Attendance.

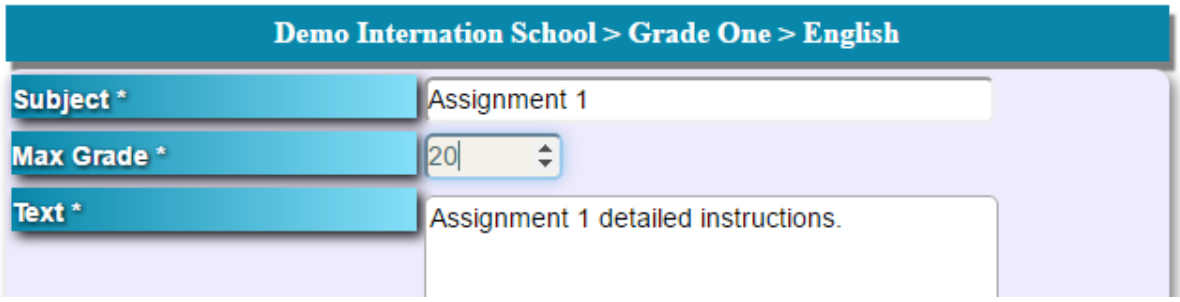
Look at the Home Work category grading. It's now 86%. It exactly the percentage we have explained in our example.

Important Rule:

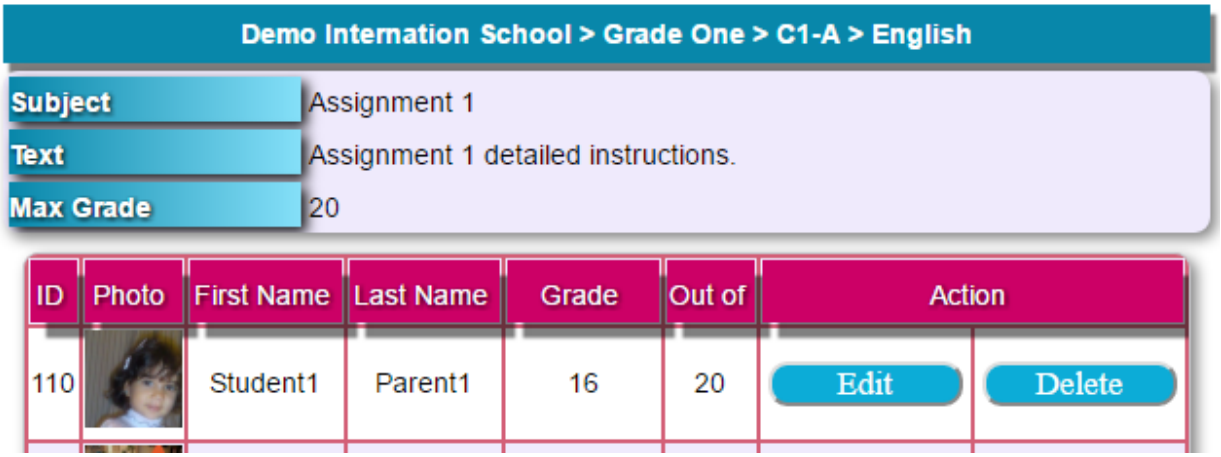
If the content teacher changed the Assignment Grade after the class teacher has graded the students on that assignment, the system would change the students grading accordingly and automatically based on the ratio of the new assignment grade to the old assignment grade. For example, assume that Student1 graded 8 out of 10 in Assignment 1 as below:



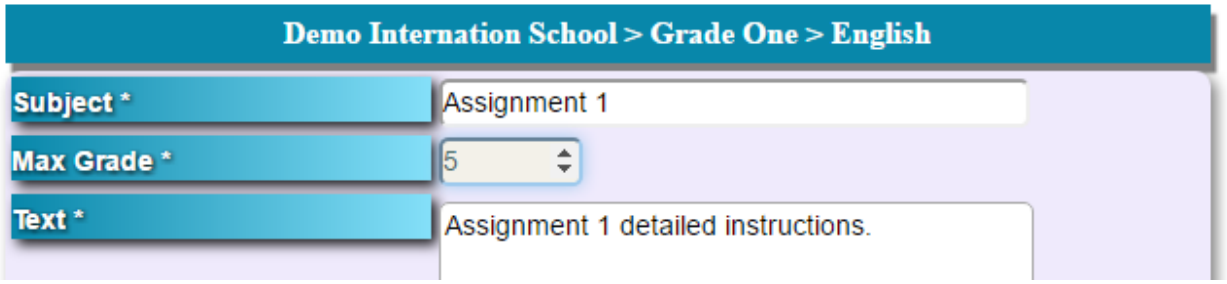
If we change Assignment 1 grade from 10 to 20 then the ratio is 20/10 = 2.



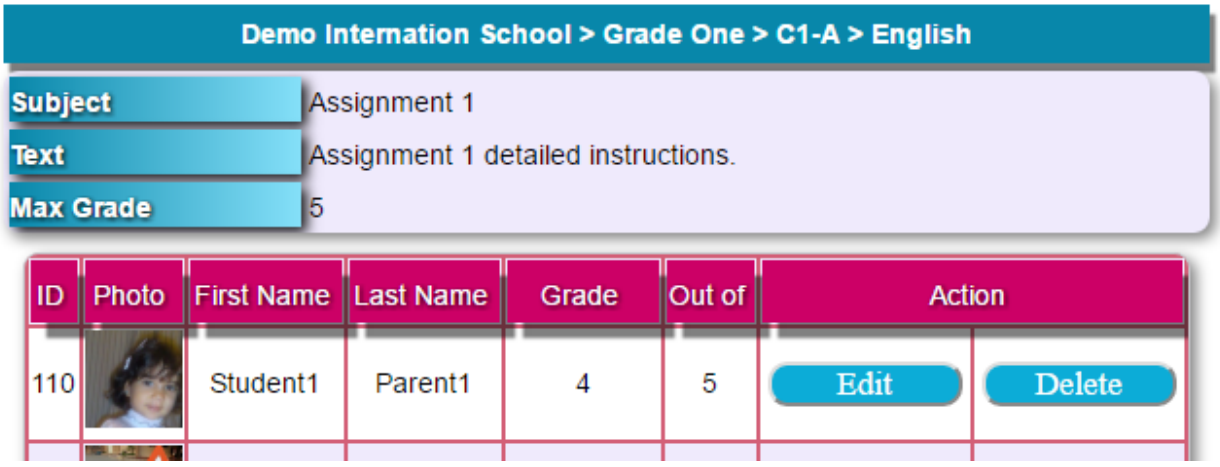
Therefore, the Student1 grade will be automatically changed to 16 (8 multiplied by 2) out of 20.



Similarly, if we change the assignment grade from 10 to 5 then the ratio is 5/10=0.5.



Therefore, the Student1 grade will be changed automatically to 4 (8 multiplied by 0.5) out of 5.

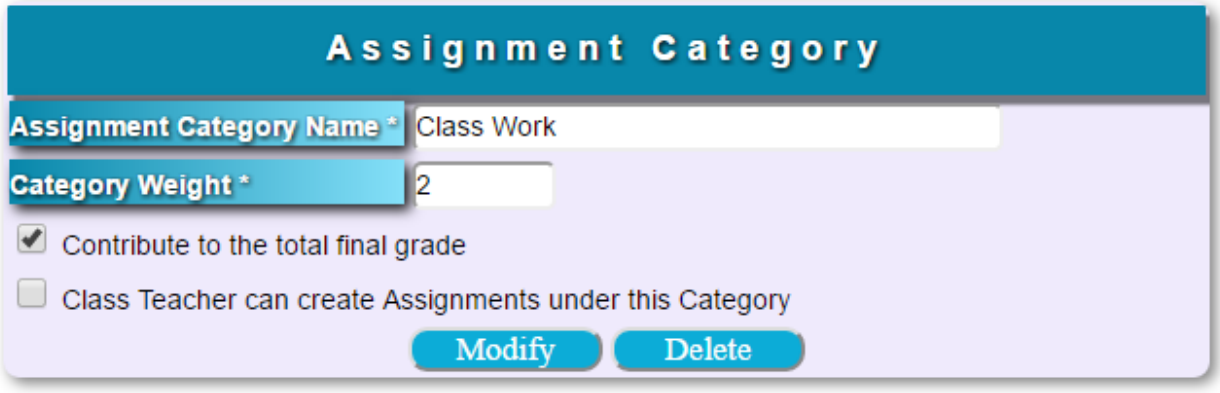


Non-Standard Assignments

As explained before, non-standard assignments are created by the class teacher, not the content teacher.

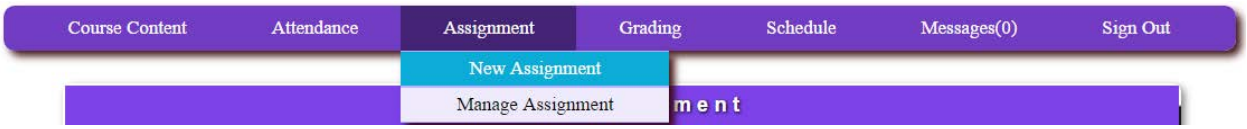
Class teacher can only create these assignments in an Assignment Category with "Class Teacher can create Assignments under this Category" checked. Recall the following screen:

Course Content > Assignment Category

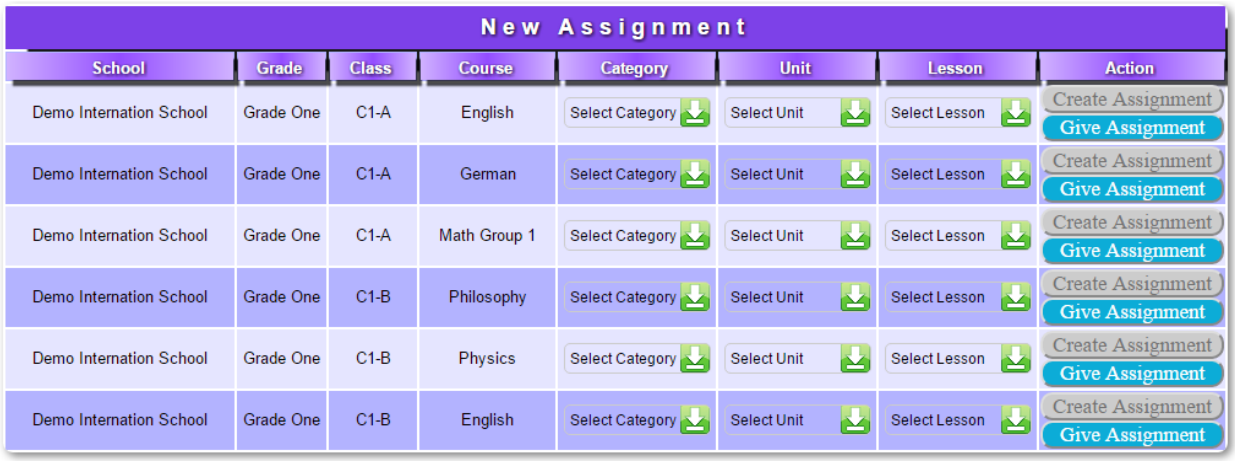


To create non-standard assignment you must be a class teacher. Go to Assignment > New Assignment as follows:

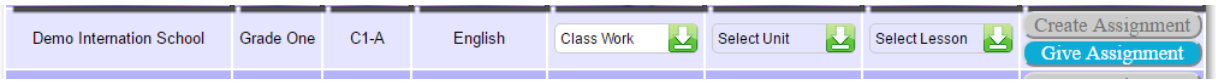
Create Assignment



You will get the following table:

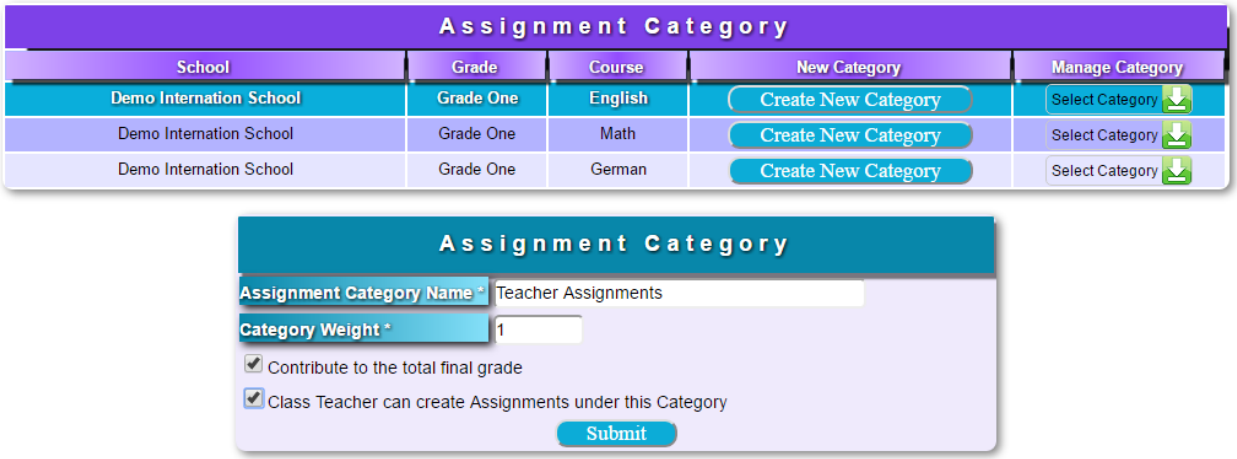


You can notice that Create Assignment button is dimmed which means you cannot click on it to create an assignment. In order to activate the button, you need first to select a category from the Category drop down list. The system will then check if this category you have selected has the "Class Teacher can create Assignments under this Category" field enabled. If it is not enabled then you will still not be able to activate the button. As an example, let's choose any category from the drop down list as follows:



You can see that the button is still dimmed. This is because you, as a class teacher, still don't have the authority to create assignments under this category.

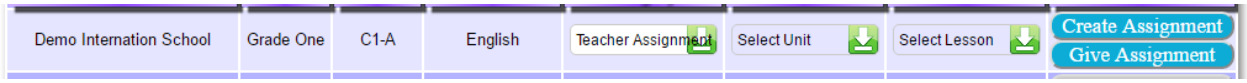
Let's, as a content teacher, create a new assignment category as follows:



Note that "Class Teacher can create Assignments under this Category" is now enabled.

Click on Submit to create the category.

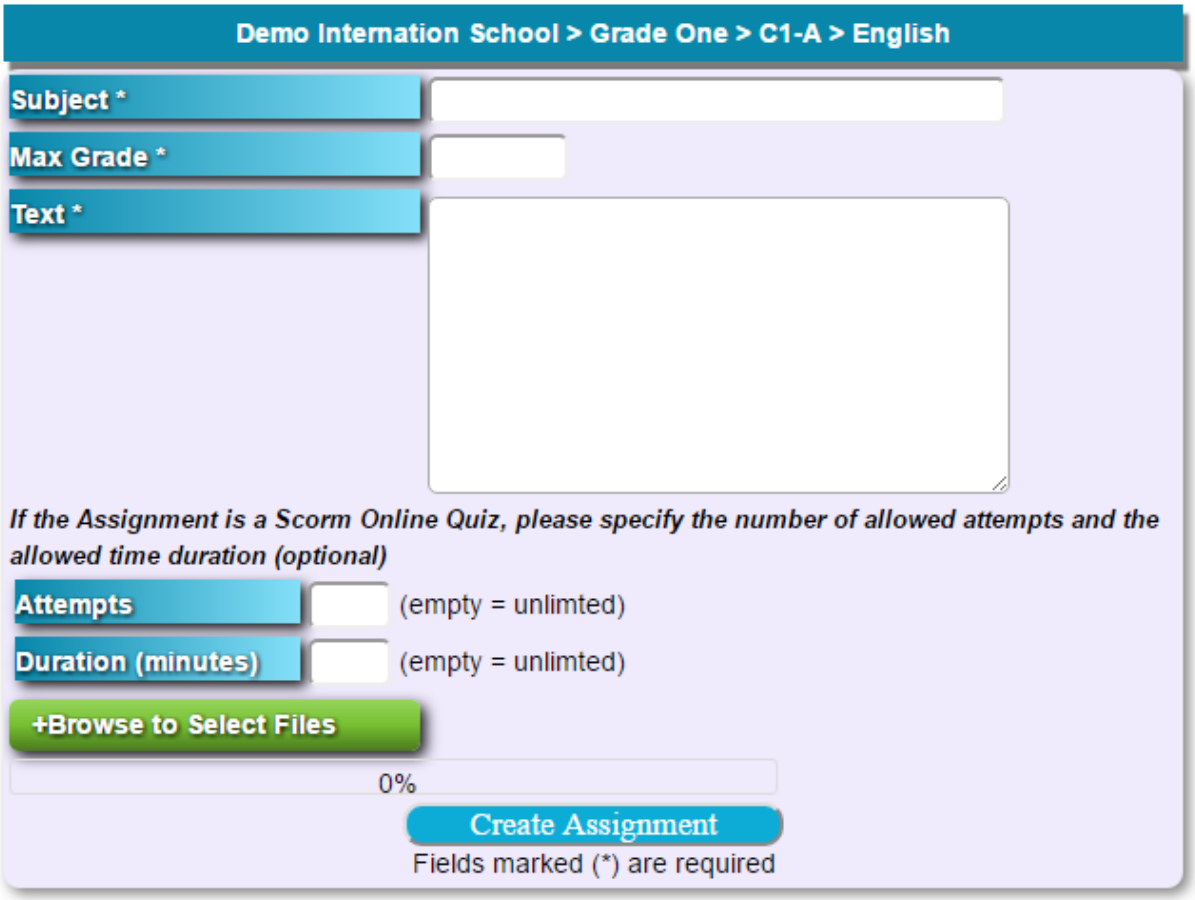
Let's now check, as a class teacher, what happens when we select the above category.



As you can see, when we selected "Teacher Assignment" category we have just created, the Create Assignment button now is active and you can now create assignments.

Click on Create Assignment button to create a non-standard assignment.

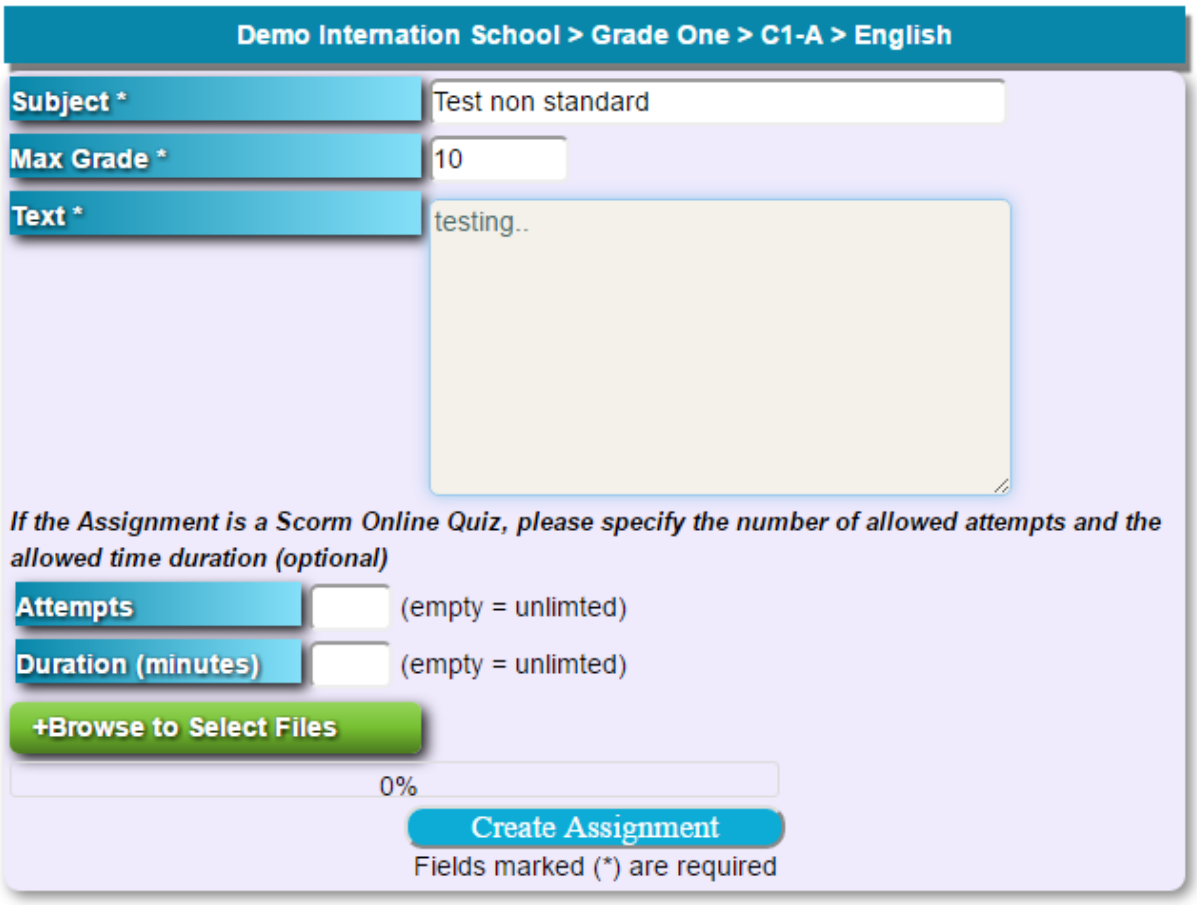
The following form will be displayed:



As you can see, it's exactly the same form that creates the standard assignment.

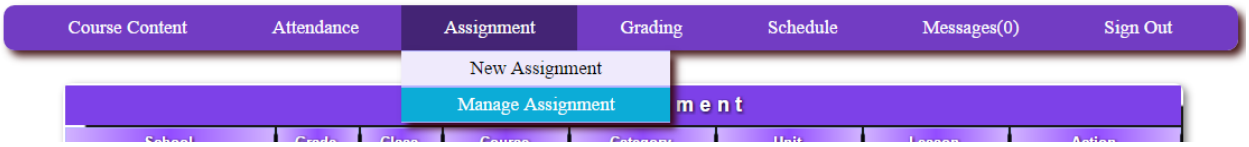
Fill in the form and proceed with creating the assignment, it's exactly the same process. The only difference is that this assignment now is non-standard. It's something belong to the class teacher who created this assignment.

Let’s create the following one:



To manage non-standard assignment, as a class teacher who created this assignment, go to Assignment > Manage Assignment as below:

Edit Assignment



Then you will get the following table:

Again, the Edit Assignment button is dimmed. You will need to select a category first. The system will check if you are authorized to edit assignments in the selected category. You can only edit non-assignments you have created.

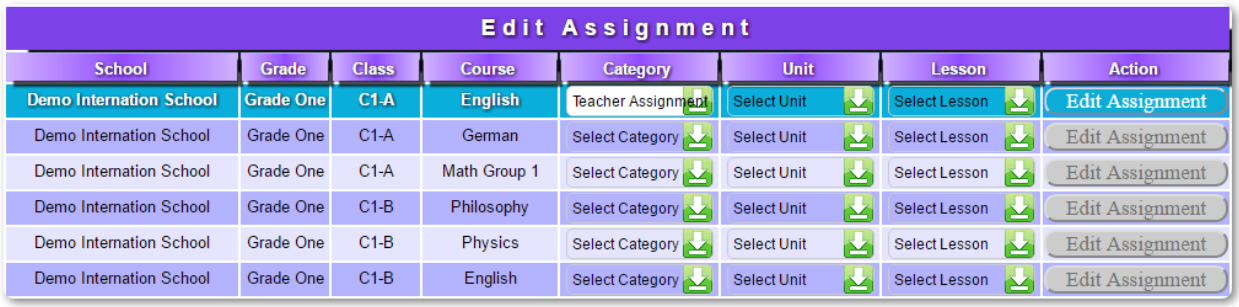
Try to select Quizzes category for example and see what happens to the button:

You can see that the Edit Assignment button is still dimmed. This is because you don't have authority to create, and hence edit, in that category.

Now select Teacher Assignments category and see what happens to the button:

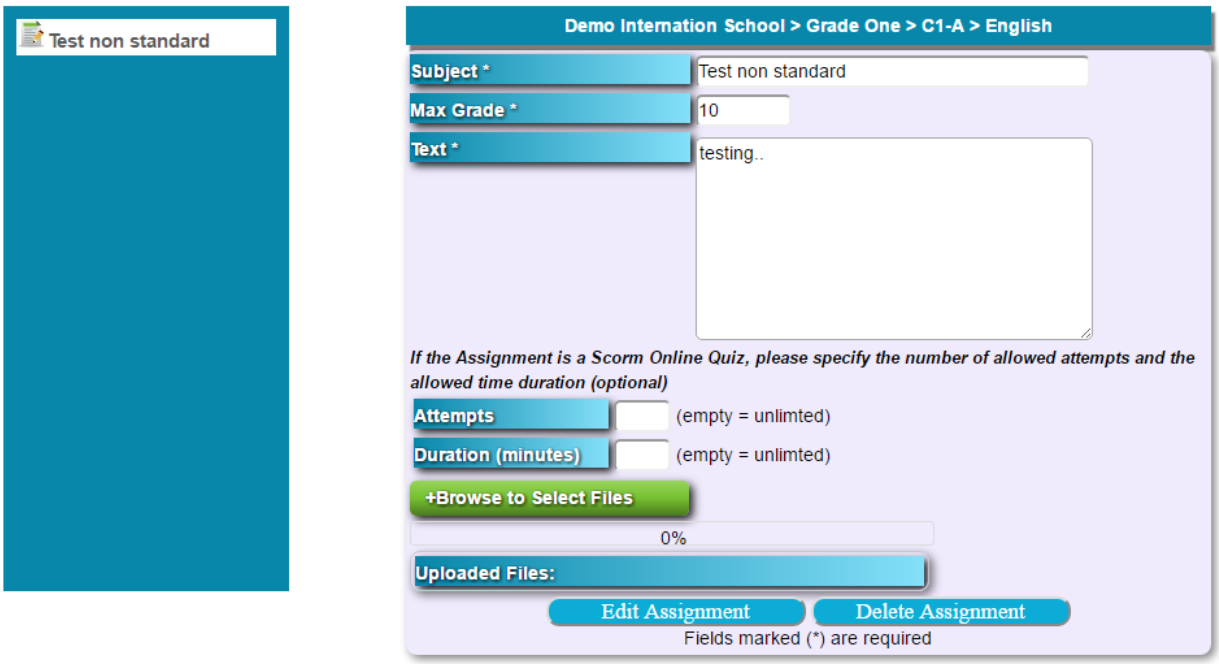
Yes. The button is now active and you can click on it to edit an assignment you have previously created under this category.

Let's click on the button and get the below assignments list:



Look at the left column. It contains the assignments list in the selected category. Notice now that the word “Standard” is not displayed next to the assignment name which means this assignment is non-standard.

Click on the assignment name to manage the assignment:



Again, it’s exactly the same form as if we are managing the standard assignment. You can edit in any field, upload files, delete files, or delete the whole assignment.

Give Assignment and Grade assignment are exactly the same for non-standard assignment. You need to give the assignment first and then grade it as we have explained in the standard assignment section. Therefore, there is no need to repeat this again.

Scorm Online Quiz

The Online Quiz is an assignment that is given to the student to complete online and automatically graded online without the teacher intervention.

Online Quiz consists of multiple choice questions, true/false questions, fill-in-the-blank questions…etc.

Online Quiz can be created by a software authoring tool that generates Scorm compliant quizzes.

Scorm stands for "Sharable Content Object" which indicates units of online training material that can be shared across systems. SCORM defines how to create "sharable content objects that can be reused in different systems and contexts.

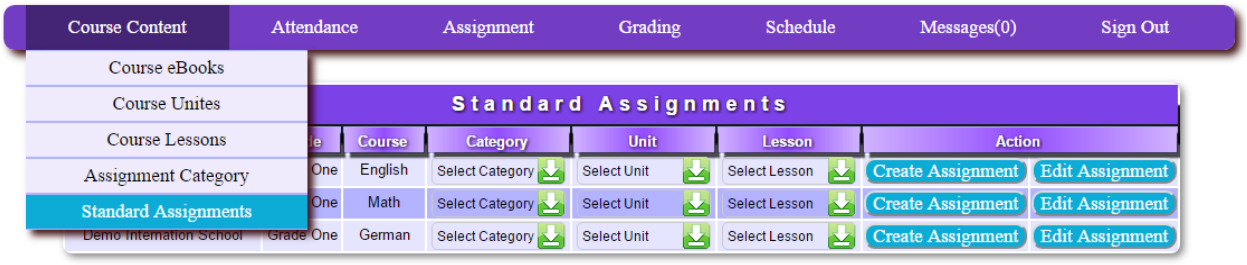
In our system, the Scorm online quiz module supports the Scorm generated quizzes but cannot generate these files. You will need to create the file by Scorm content authoring software and upload it to the system which supports Scorm 1.2 as well as Scorm 2004 standards.

Our system is only tested with the quizzes created by Adobe Captivate software which is the leader in this area. However, it should support any Scorm compliant quizzes that are created by other software Scorm content authoring tools.

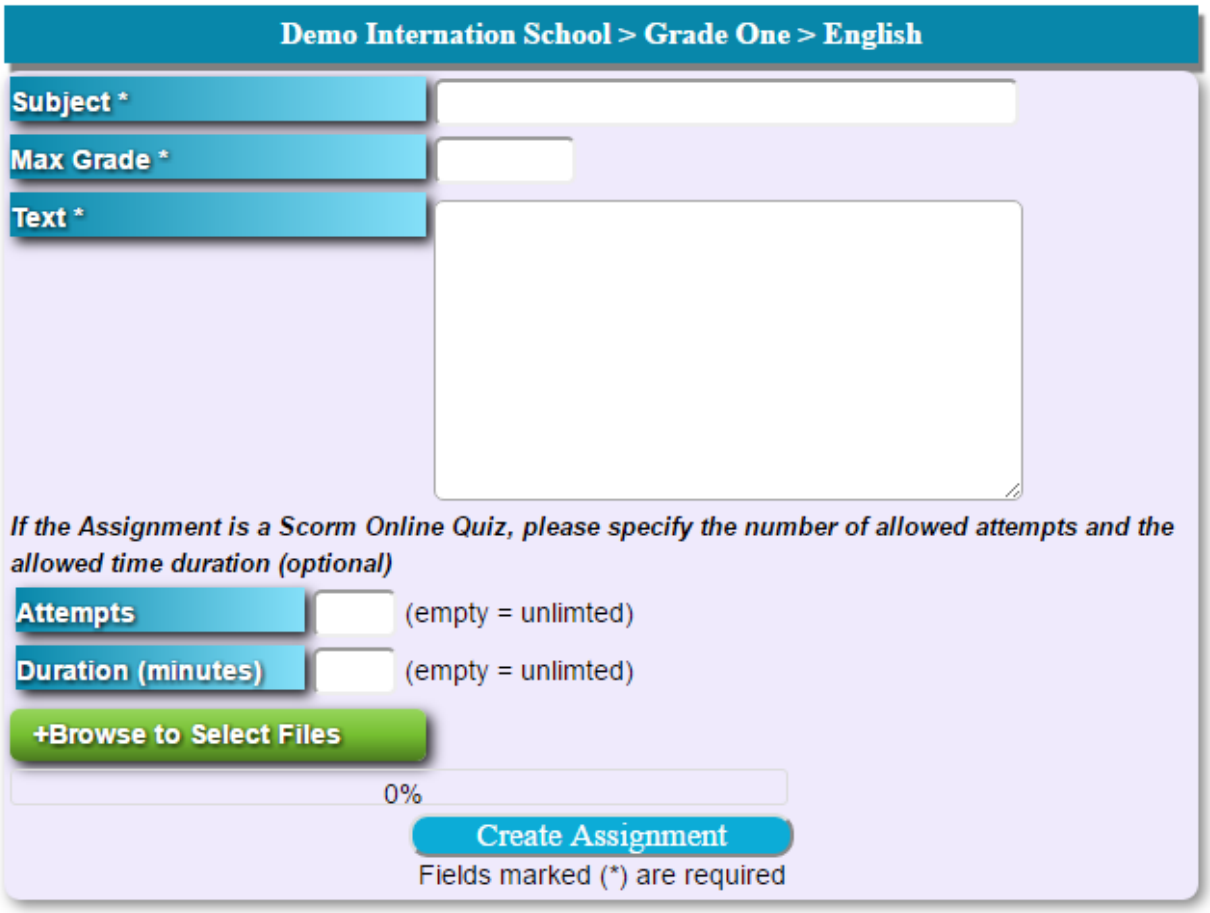
You can get more information about Adobe Captivate software from this link:

http://www.adobe.com/products/captivate.html

To create the Online Quiz Assignments, you need to follow the normal process of creating the assignments like what we have explained earlier. Go to Course Content > Standard Assignments as follows:



Select the category under which you would like to create the Online Quiz Then click on Create Assignment to get the Create Assignment form as below:



Enter the Subject, Max Grade, and text.

The Max Grade is as normal; the maximum possible points for the grade. When the students finish the quiz they will be graded based on the percentage they achieve in the quiz multiplied by the Max grade. For example, if the Max Grade is 10 and if the quiz result is 80% then the grade will be 8 out of 10.

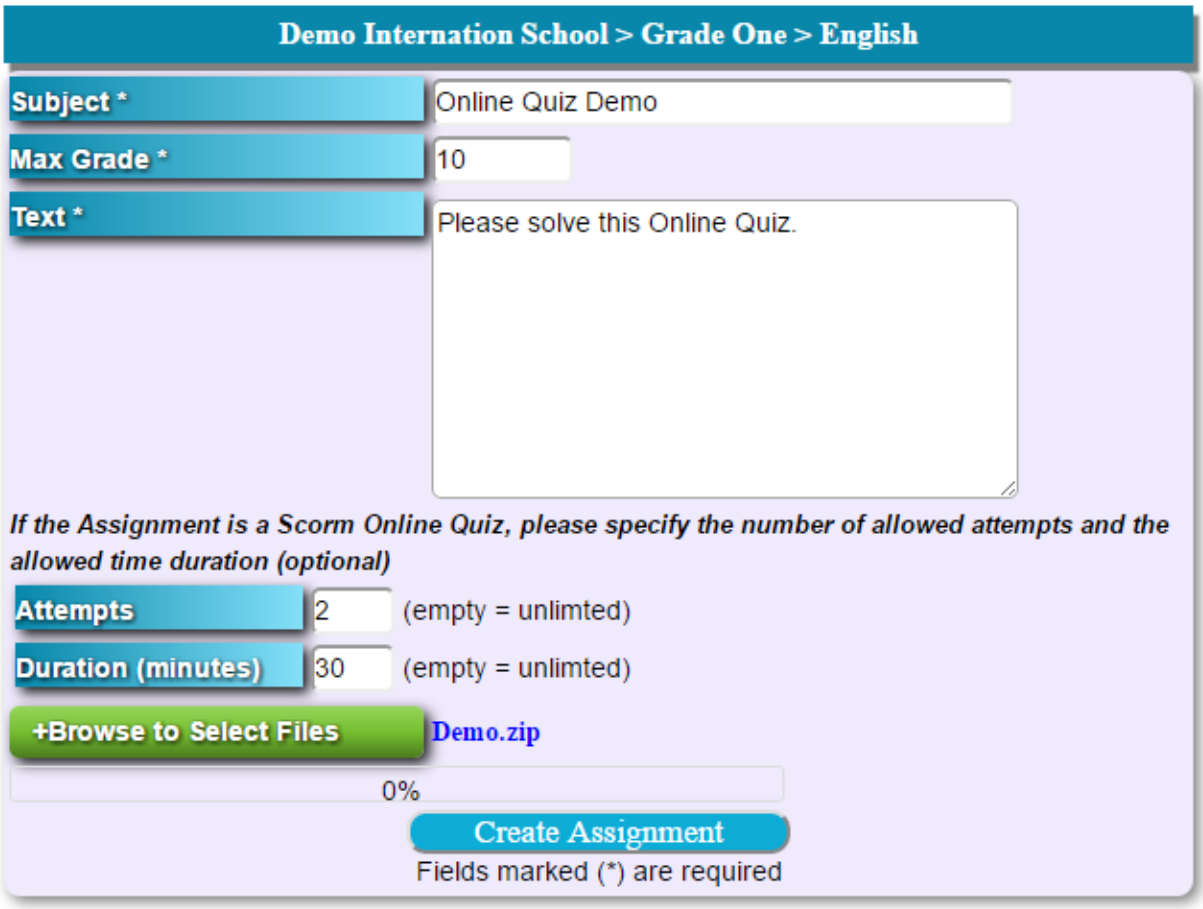
In the Attempt field, you may choose to enter how many attempts you need the students to sit for the Online Quiz. For example, if you enter 2 then you are giving two chances for the students to sit for the Online Quiz. The system will save the higher score in the database. You may leave this field empty; in this case, the system will allow unlimited number of attempts.

In the Duration (minutes) you need to enter the time constraint. It's in minutes, so if you enter 30 minutes it means you are allowing the students to complete the Online Quiz within 30 minutes. If the time exceeded the allowed duration, the system will finish the attempt and grade the student accordingly. No more time will be given after that.

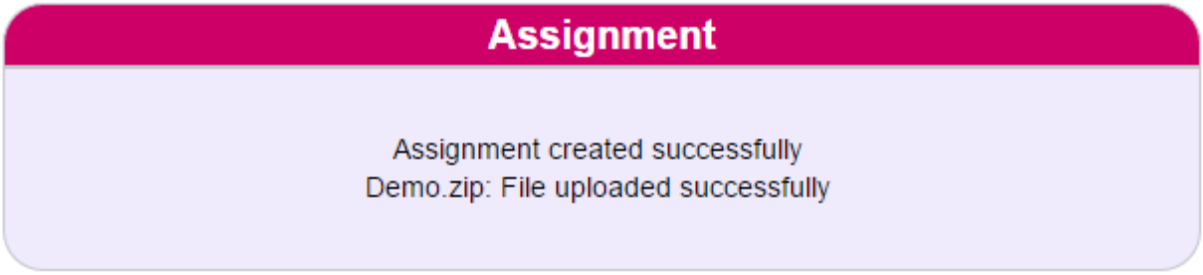
As for the Online Quiz file itself, you will need to upload it as if you are uploading any normal file. However, the Online Quiz has to be a Scorm Compliant file that is created using the Scorm content authoring software and it must be in (.zip) format. So, when you create the file in the software, make sure that the output is a .zip file. Also, note that you cannot upload many Scorm files. Only one .zip file will be recognized as the Scorm Online Quiz. However, you can upload any normal files along with the Scorm Online Quiz file.

Now complete the form and upload the file as discussed above.

When finished, click on Create Assignment:

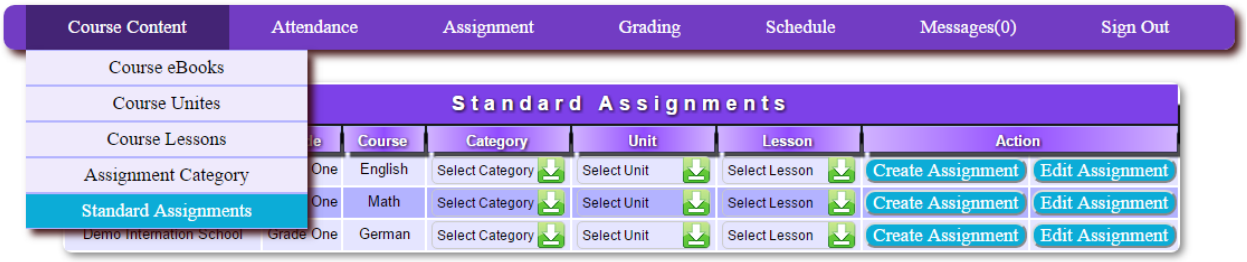


The system will respond with the following confirmation message below:

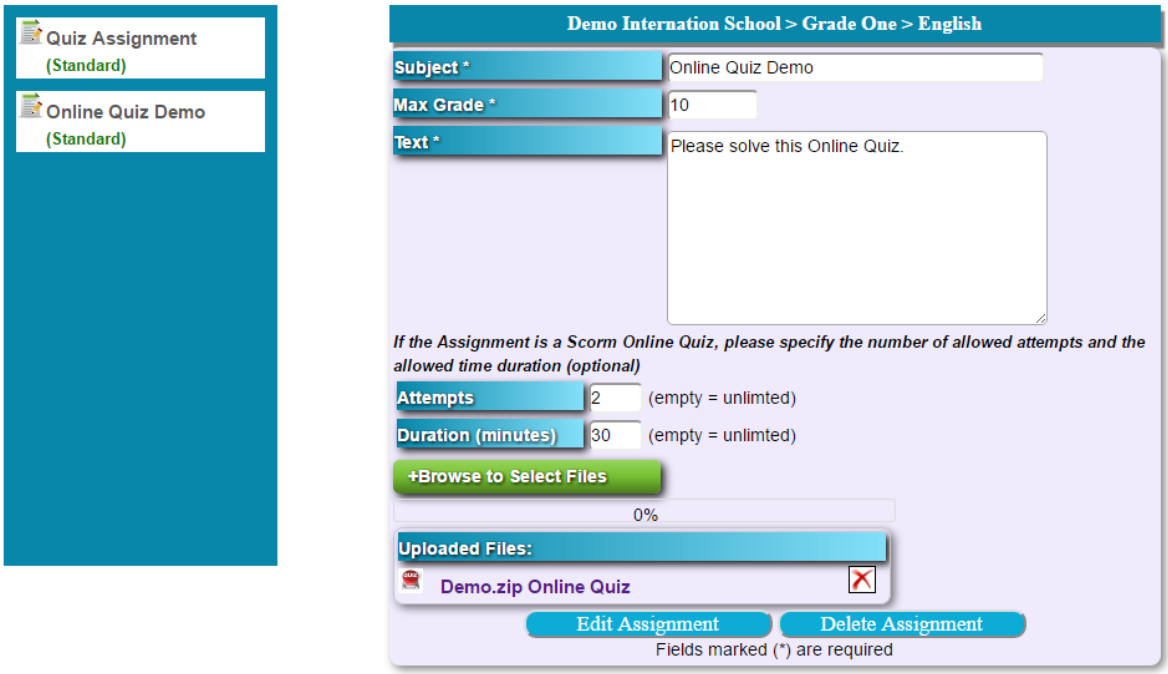


Now let's check this Assignment to review the Online Quiz we have created.

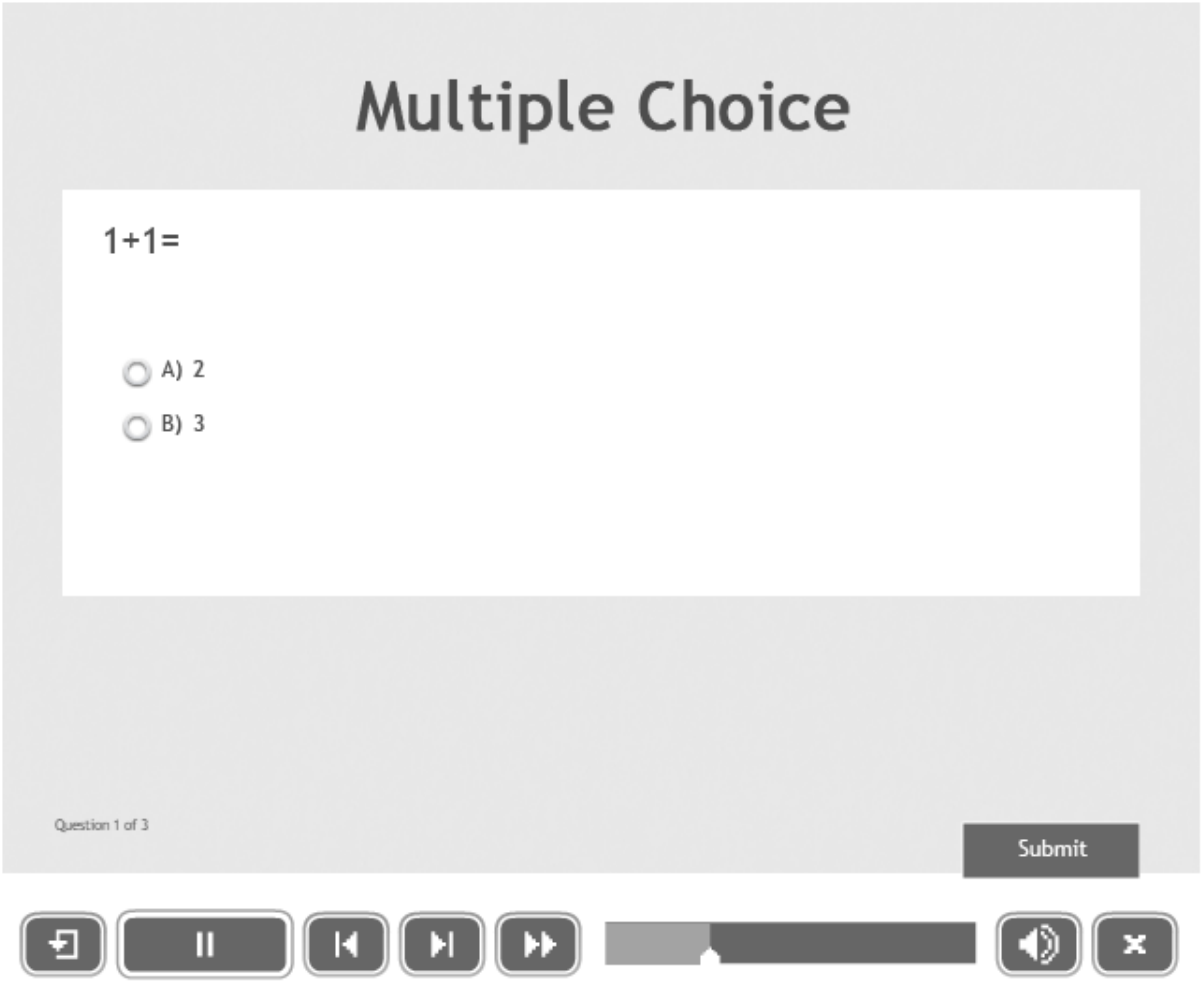
Go to Course Content > Standard Assignment as follows:



Select the category under which you have created the Online Quiz and click on Edit Assignment button to retrieve the Edit Assignment form as below:

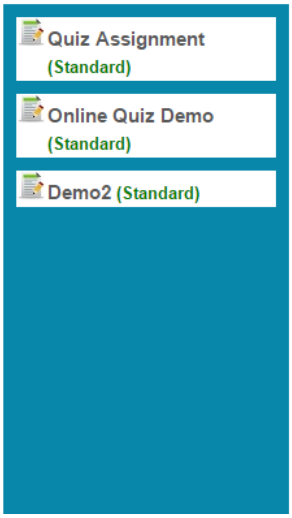


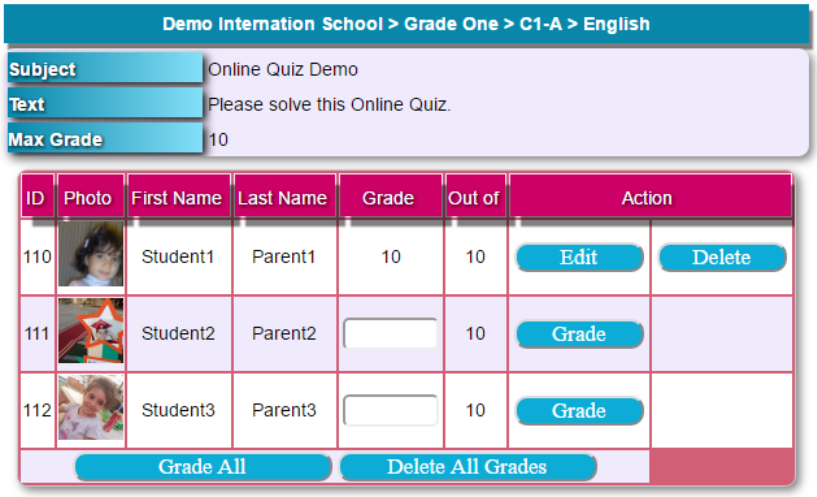
Notice the file name “Demo.zip Online Quiz”. If you click this file, you will get the following:



That’s now the Online Quiz displayed for your review. This is also what will be displayed for the students but with the timer, if you have set the duration when you created the file.

When the student takes the quiz, the system will grade it automatically. However, you will still have the ability to manually update the graded quiz. Go to Grading > Grade Assignment and retrieve the quiz you would like to update as below:





Click Edit button to change the grade. You can also delete the grade completely.

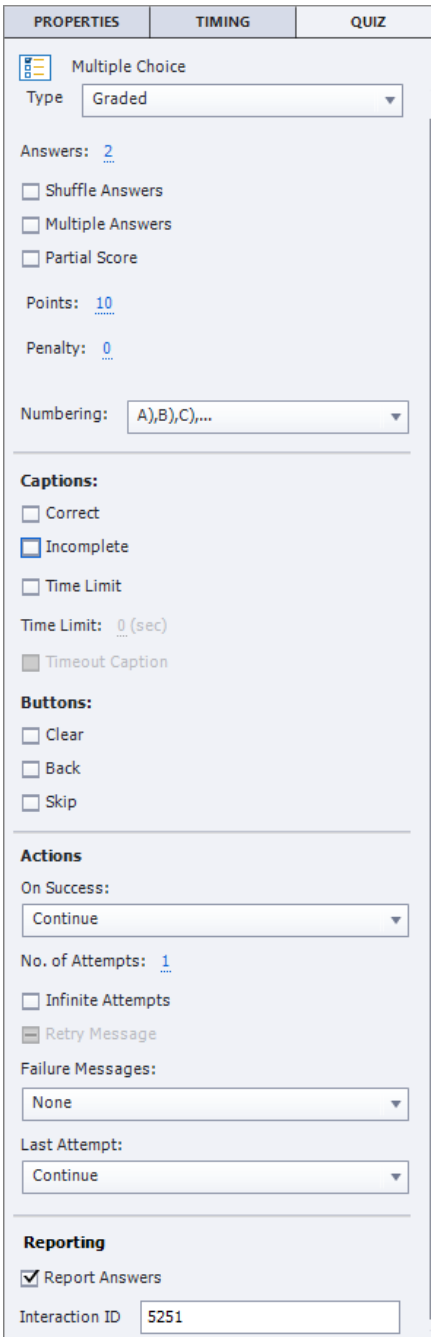
Important Settings

While creating the Scorm Online Quiz file using the Scorm content authoring software, you need to take into considerations the next important settings:

Note: The following screen shots are taken from Adobe Captivate Software

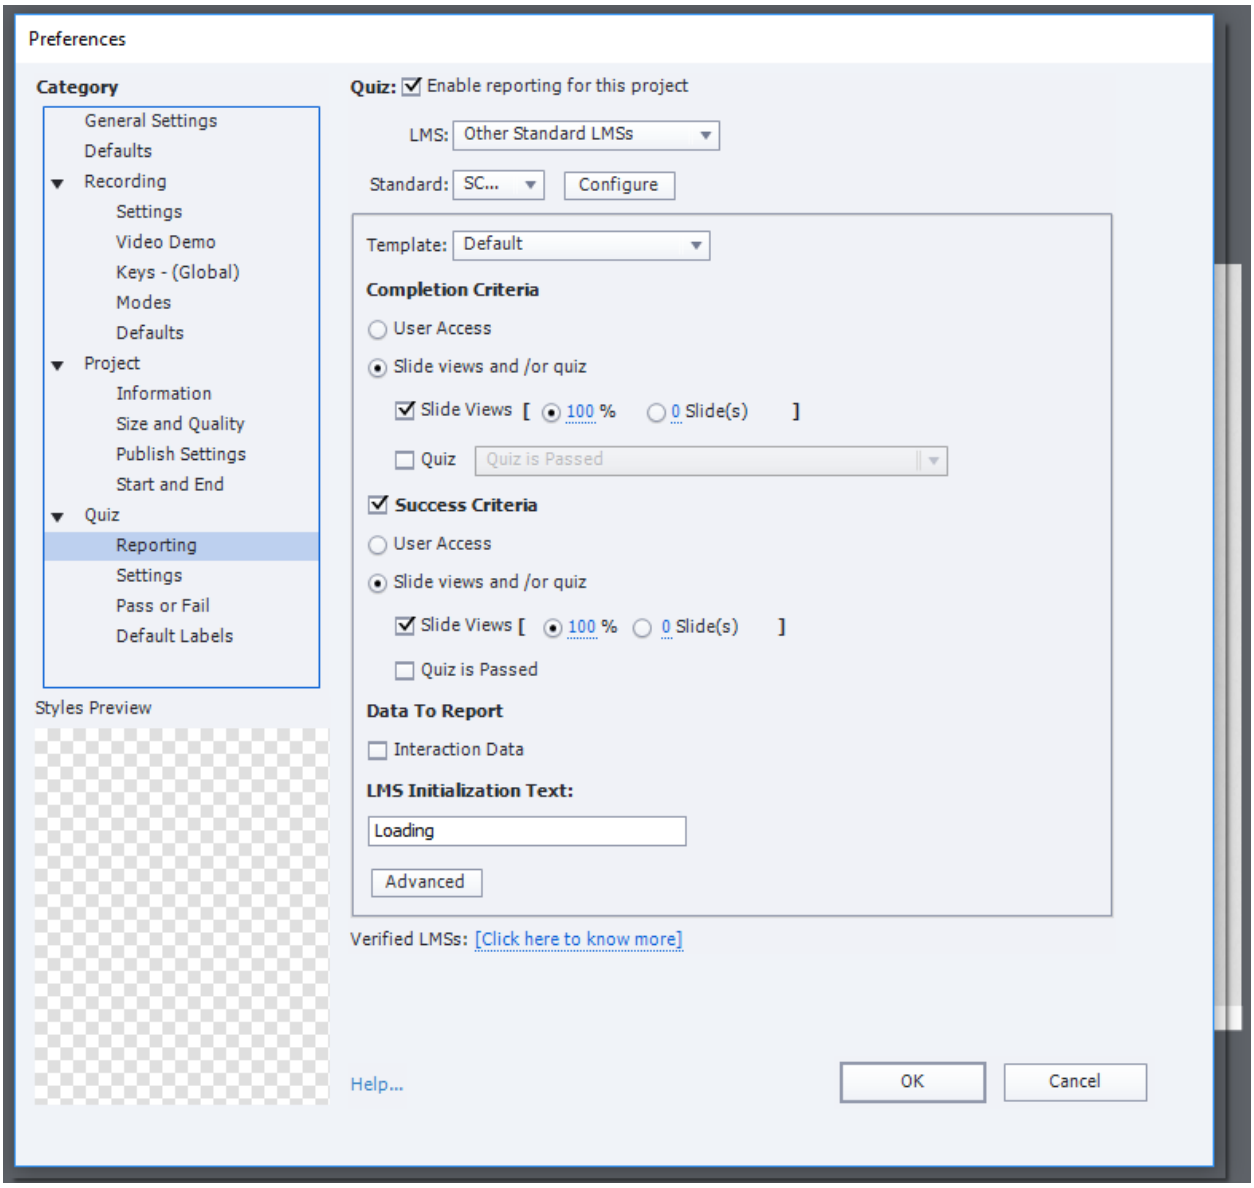
When you create the question slide, and for each question slide, make sure you have the following setting in place as in the screen below:

Note that you can change the number of answers or points the way you like but you need to make sure to deselect “Captions > Correct” and “Captions > Incomplete” and set Failure Message to “None”. This is in order hide the right answers.
You also need to deselect Time Limit
Also, note here that the Points you define for each question will determine the total score of the quiz. For instance, if you have two questions and you set the points for the first one as 10 points while you set the points for the second one as 5 points then the total quiz score will be 15. If the student answered the first question correctly and the second incorrectly then the score would be 10 out of 15 and the quiz score percentage would be 67% and in this case, if the Max Grade is 30 then the final result would be (30*0.67 = 20 out of 30).
In case the student answered the first question incorrectly and the second one correctly then the score would be 5 out of 15 and the percentage would be 33% and the final result would be 10 out of 30.



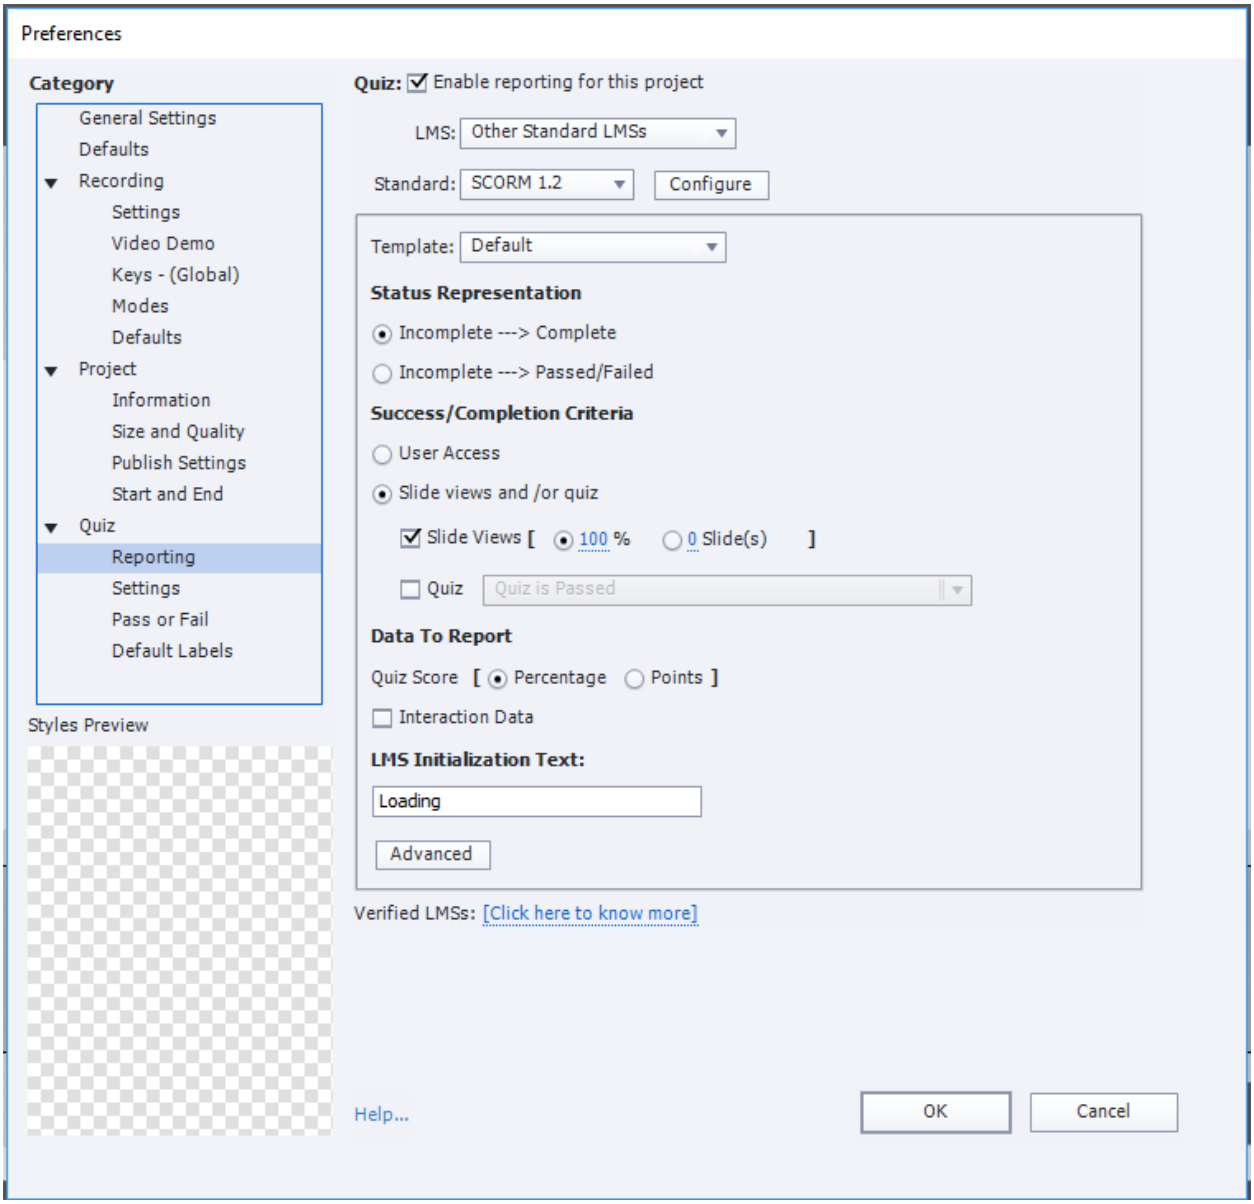
Go to File > Publish Settings, you will get the following screen:

Under Quiz > Reporting:

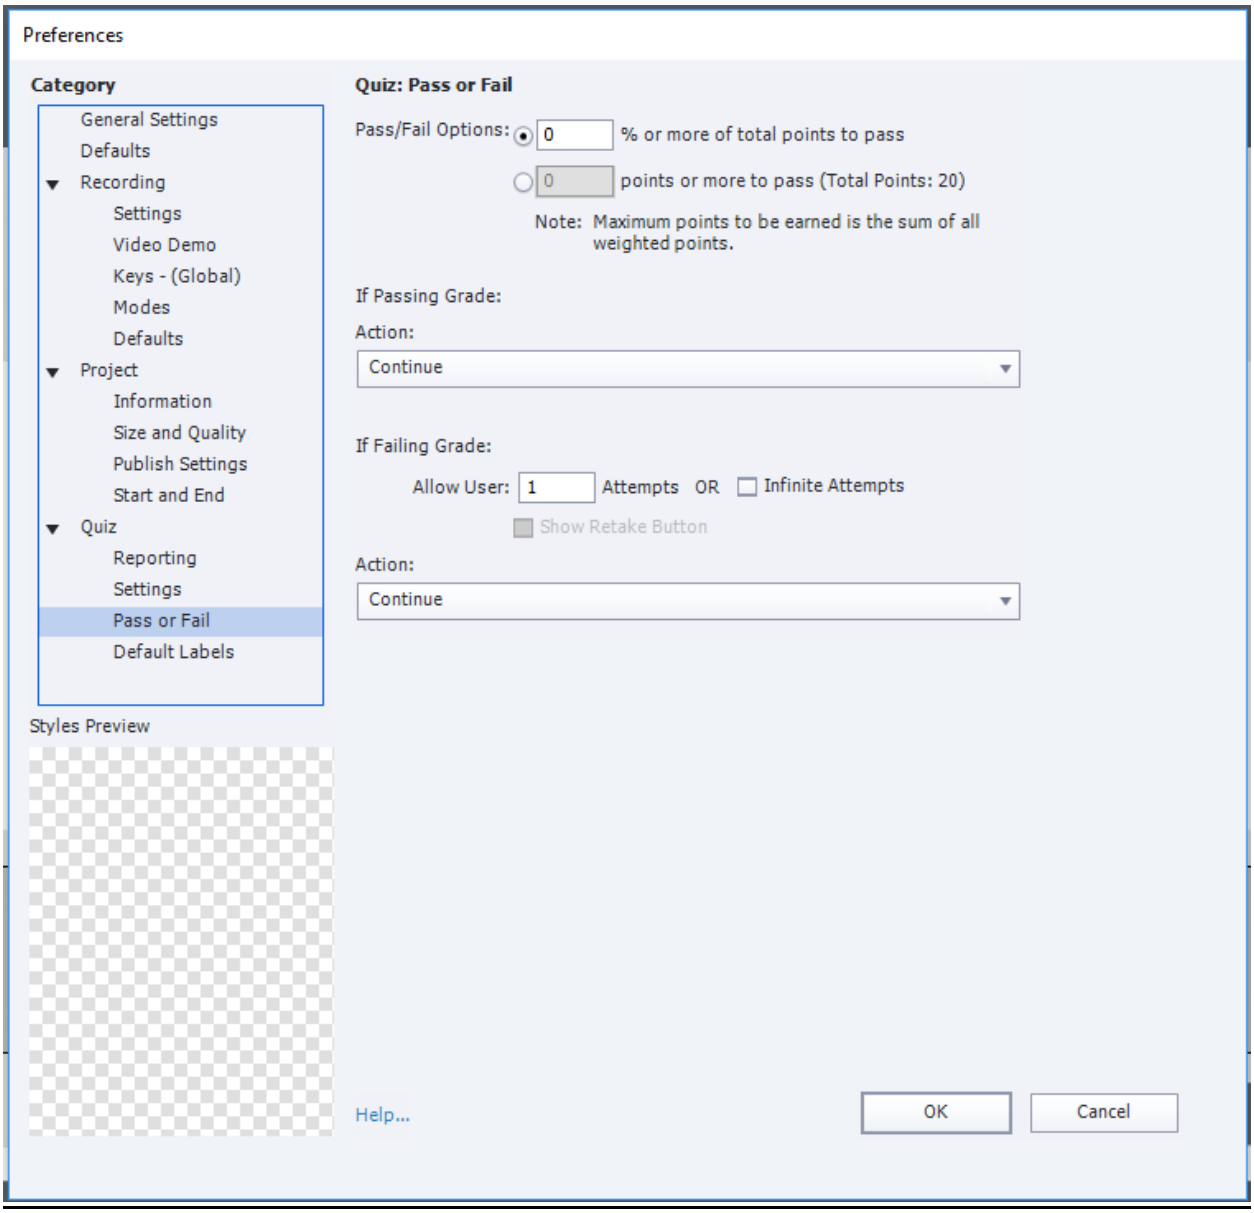


- Check the checkbox "Enable reporting for this project"
- From LMS drop down list choose "Other Standard LMSs"
- From Standard drop down list, select either Scorm 1.2 or Scorm 2004
- For the Completion Criteria select "Slide Views and / or quiz" and check the checkbox "Slide Views" and select 100%.
- Check the checkbox Success Criteria and select "Slide views and / or quiz and check the checkbox "Slide Views" and select 100%.

Note that depends on the software version, you might find the above screen a bit different like the below one:

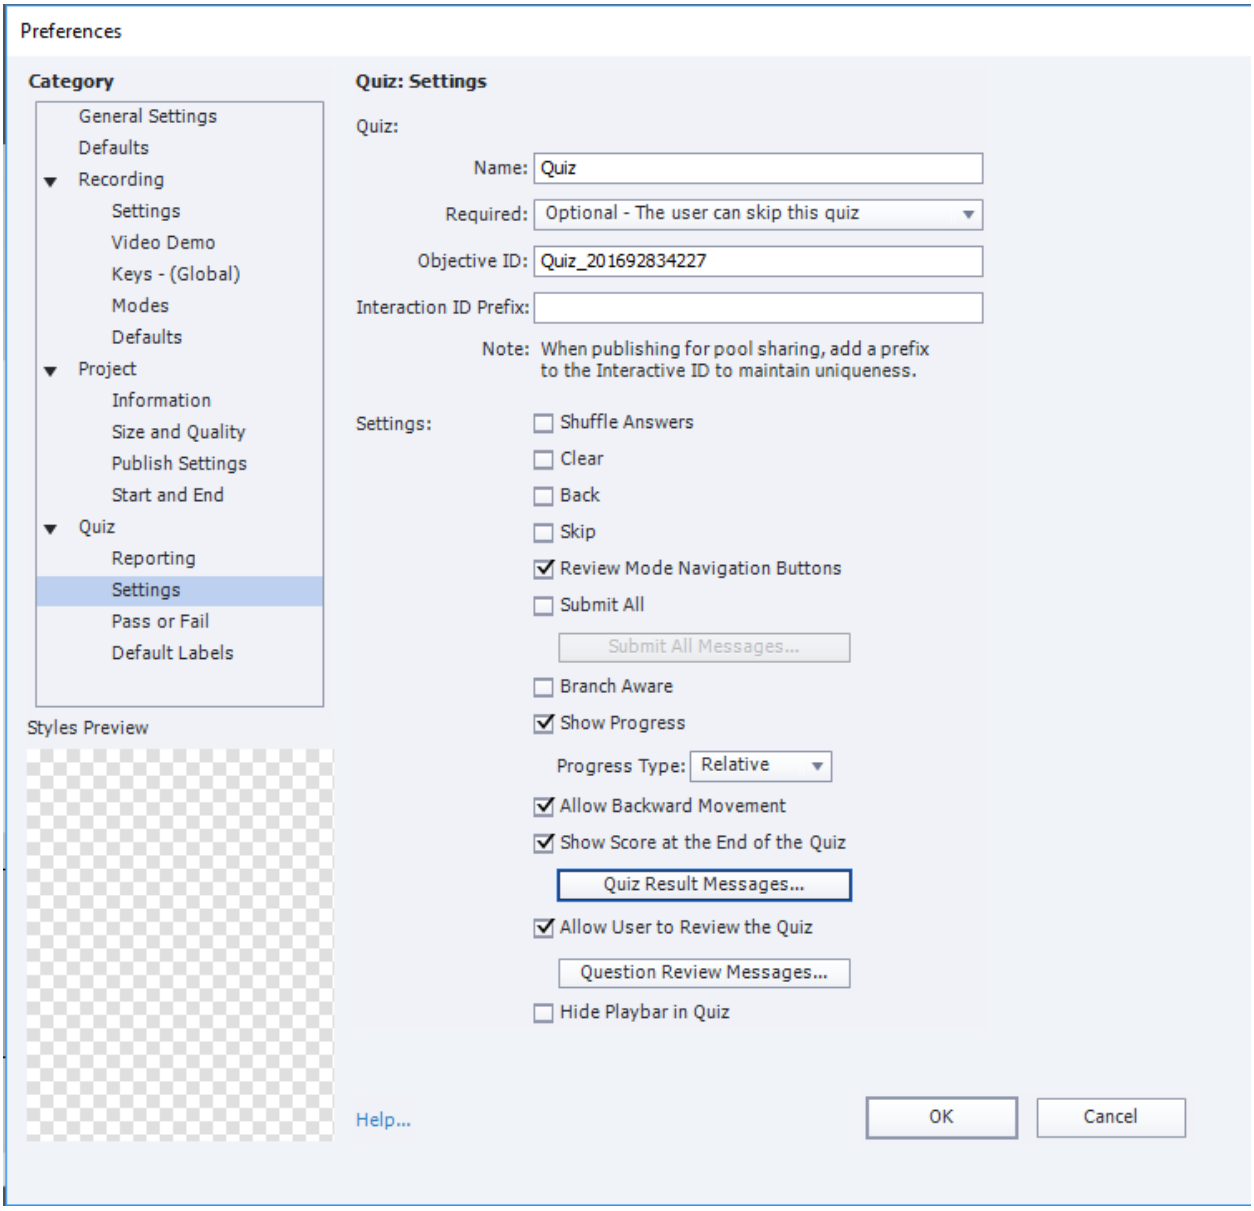


Under Quiz > Pass or Fail:

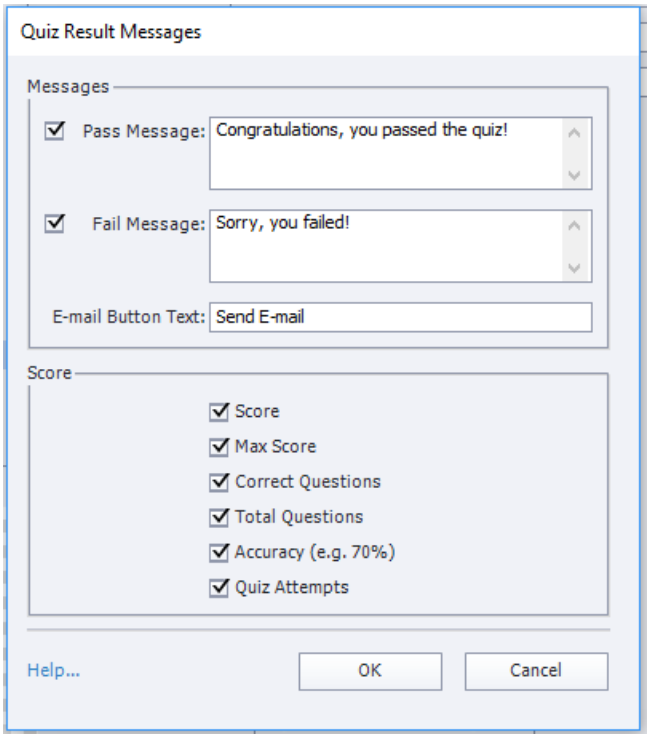


- In Pass/Fail Options: select the first choice and put 0 % or more of total points to pass.
- Under "If Passing Grade: Action:" select "Continue" from the drop down list.
- Under "If Failing Grade: Allow User:" enter "1" Attempts.
- Under "If Failing Grade: Action:" select "Continue" from the drop down list.

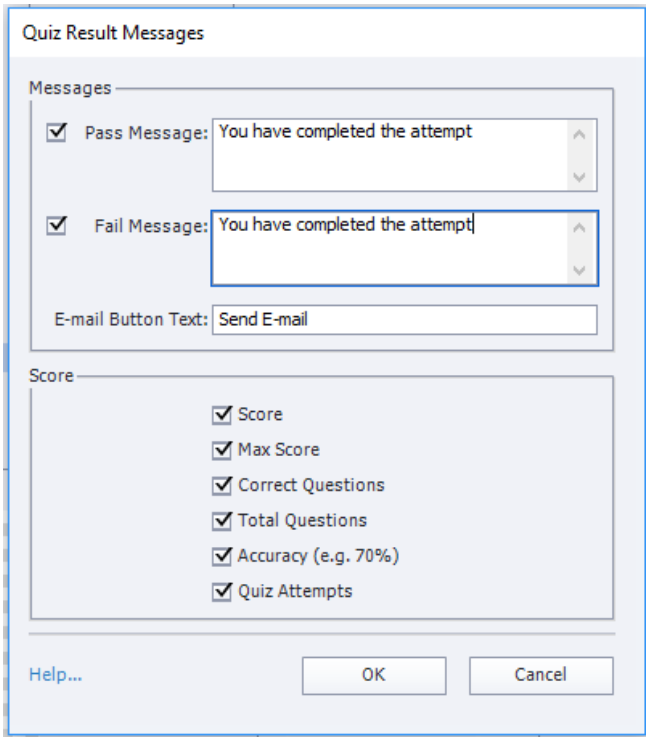
You also need to change the message that will be displayed when the student finishes the attempt. So, under Quiz > Settings, click on "Quiz Result Messages…" button shown in the screen below:



You will get the following screen:

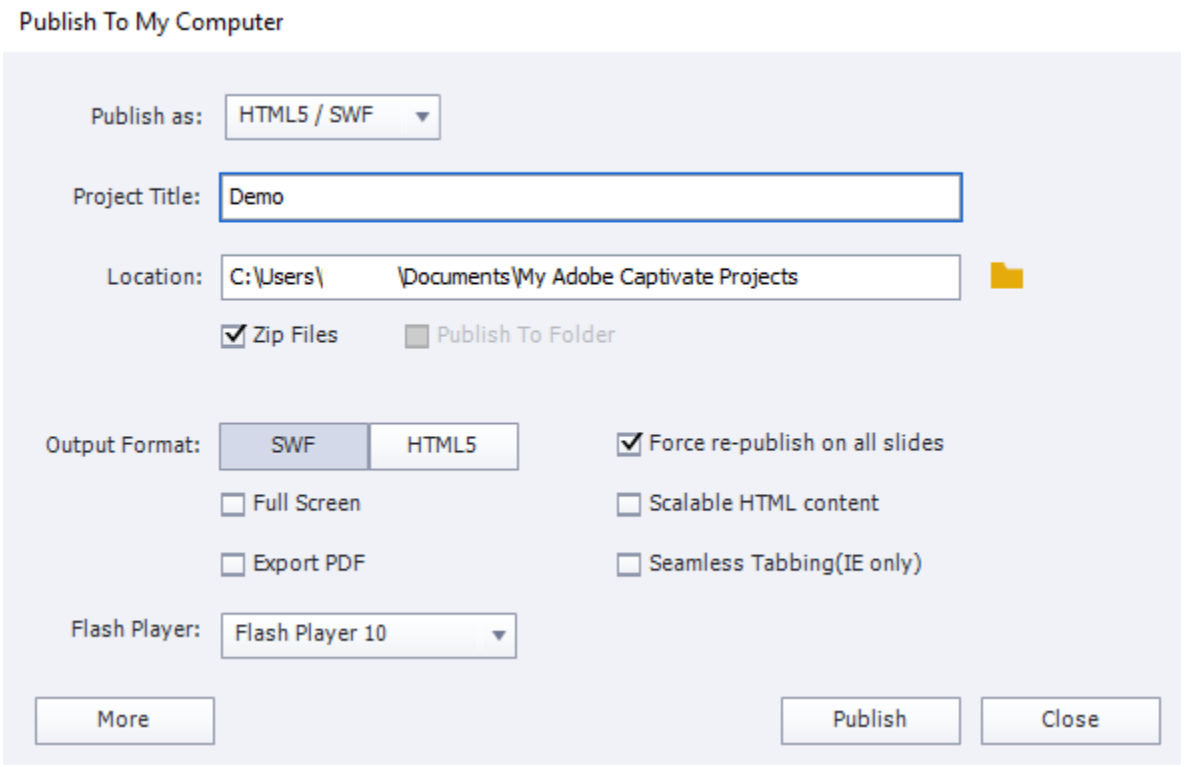


Change both Pass Message and Fail Message to “You have completed the quiz” or “you have completed the attempt” or choose the appropriate message.



Finally, when you finished the project, publish it as follows:

Go to File > Publish. You will get the below screen. Make sure to select Zip Files and make sure to select SWF as the Output Format

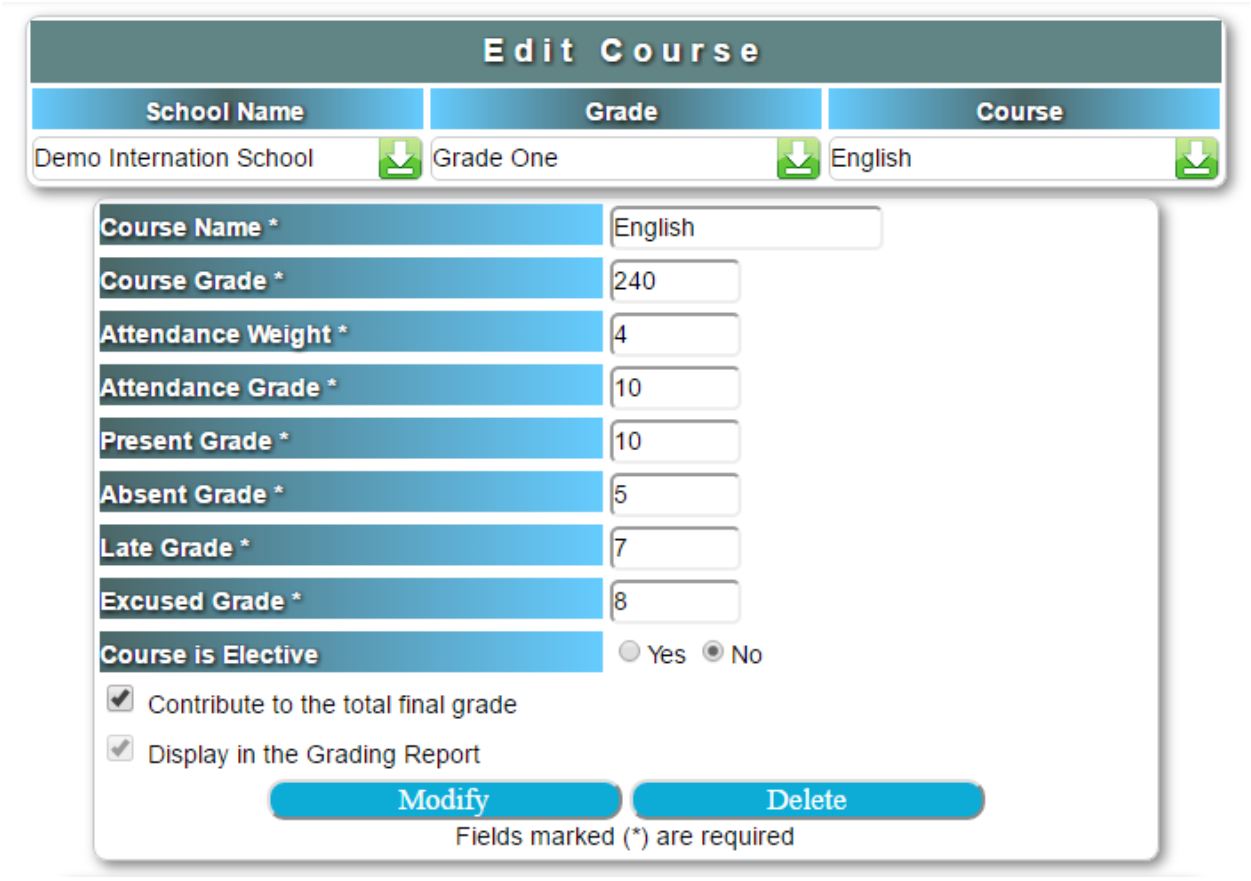


Attendance

Attendance of students is measured by the class teacher on the course level not on the school day level. This mean, each course has its own attendance for every student. This is to achieve maximum accuracy for attendance and attendance grading.

The Attendance system is integrated with the Schedule system. For each course, there are scheduled sessions. The course may have a session or more per day or it may have no sessions at all in some days. Based on these scheduled sessions, the teacher will take the attendance for the students in a course. The class teacher will retrieve the session as per the schedule and mark the students as one of four attendance status: Present, Absent, Excused, or Late.

Each of these attendance statuses has its own grade which was predefined when the Admin created the course. We will recall the screen below to remind you with the Attendance Grade and all the statuses grades which the Admin has already defined when she/he created the course. Screen below belongs to the English course:



As you can see, there are 6 fields related to the attendance in that form.

Attendance Weight: consider the attendance as one of the categories that contributes to the grading system. As we have discussed earlier in the Assignment Category section, each category has its own weight in the grading system. These weights determine the impact of the categories on the course grading. Similarly, the attendance has its own weight that also determines the impact of the attendance on the grading. Recall the case when we have explained how the weight of each of the three categories; Class Work, Home Work and Quizzes has impacted the grading:

"If the course grade is 240 (as shown in the screen above) and there are only these three categories (assume that there is no attendance grading or semester exams grading for now just for simplicity) then the 240 will be divided by the sum of all categories weights. That means 240 divided by (1+2+3). That gives 40."

At that time we worked under the assumption that there is no attendance just for simplicity. Now, we will have to consider the attendance to study its impact on the grading system. As shown in the screen, the Attendance Weight is 4. That means the 240 course grade will now be divided by (1+2+3+4). That gives 24. Therefore, any calculations will now multiply by 24 instead of 40.

In other words, consider the attendance is an analogy to the Assignment Category and the attendance weight is an analogy to Category Weight.

In case you would like to exclude the attendance from the course grading, in other words, the attendance is not required for that course, you can assign the attendance weight a value of 0.

Attendance Grade: it's the analogy of the Assignment Grade. Each course session is like an assignment and has to be graded. When student is marked in that session, for instance, as Late and if the "Late" status has a grade of 7 and if the Attendance Grade is 10, then we say the student attendance grade in that session is 7 out of 10.

Present Grade: When student is marked in that session as Present and if the "Present" status has a grade of 10 and if the Attendance Grade is 10, then we say the student attendance grade in that session is 10 out of 10.

Absent Grade: if the "Absent" status has a grade of 5 and if the Attendance Grade is 10, then we say the student attendance grade in that session is 5 out of 10 if we mark the student as Absent.

Late Grade: if the "Late" status has a grade of 7 and if the Attendance Grade is 10, then we say the student attendance grade in that session is 7 out of 10 if we mark the student as Late.

Excused Grade: if the "Excused" status has a grade of 8 and if the Attendance Grade is 10, then we say the student attendance grade in that session is 8 out of 10 if we mark student as Excused.

Now let's discuss how to take attendance for a group of students who may belong to a class, a course group or even elective course.

There are two methods to take attendance; the "One-Click access" and "take attendance by date".

The "One-Click access" attendance is an easy, intelligent and innovative way of taking attendance. It makes it so easy for the teachers to take attendance in one click access to the students to whom the teacher will take attendance and another one click or just a couple of clicks to take the attendance.

The One-Click access method depends on the integration between the attendance system and the schedule system. With one click on "Attendance" link in the teacher menu, the system will check the schedule and get the session that THIS teacher has to teach NOW. Accordingly, the system will recognize the course that is being studied NOW and in what class. Accordingly, the system will recognize the students who belong to the class, course group or elective course that is linked to that session which is in progress NOW. Accordingly, the system will list these students for the teacher to take the attendance.

To elaborate more on One-Click access method, let's consider an example as follows:

Let's assume that time NOW is 8:30 AM on Monday and the teacher is Teacher1.

According to Teacher1 schedule, we have the following:

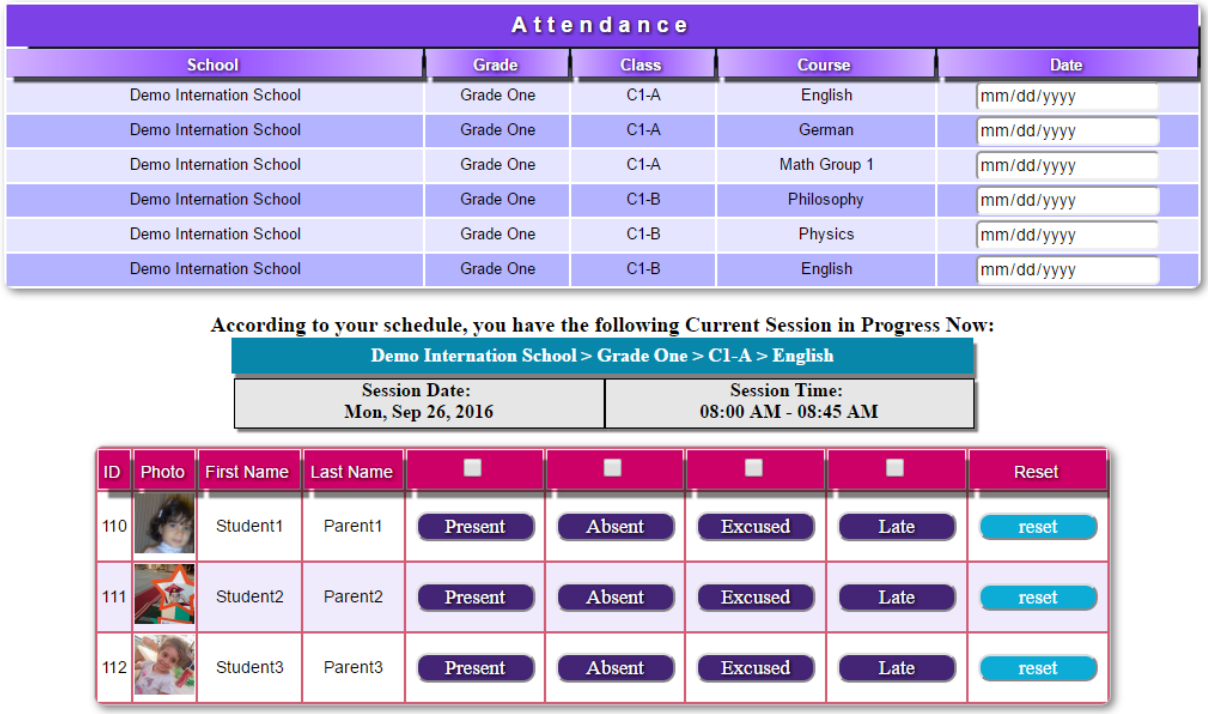
Teacher Schedule

	08:00 AM–08:45 AM	09:00 AM–09:45 AM	11:00 AM–11:45 AM	12:00 PM–12:45 PM
Monday	Demo Internation School Grade One C1-A English		Demo Internation School Grade One C1-A German	Demo Internation School Grade One C1-A Math Group 1
Tuesday	Demo Internation School Grade One C1-A Math Group 1	Demo Internation School Grade One C1-A English		Demo Internation School Grade One C1-A German
Wednesday	Demo Internation School Grade One C1-A German		Demo Internation School Grade One C1-A English	
Thursday	Demo Internation School Grade One C1-A English	Demo Internation School Grade One C1-A German	Demo Internation School Grade One C1-A Math Group 1	
Friday	Demo Internation School Grade One C1-B English	Demo Internation School Grade One C1-A English	Demo Internation School Grade One C1-A German	Demo Internation School Grade One C1-A Math Group 1

Therefore, based on the schedule, and according to the time NOW which 8:30, Teacher1 has to teach English course in Class C1-A since there is a session between 8:00 AM and 8:45 AM on Monday.

Accordingly, the system now knows the class and the course and will be able to automatically recognize the students that the teacher needs to take their attendance. Accordingly, the system will list these students automatically once the teacher clicks on Attendance link in the menu.

So, at 8:30 AM (or any time between 8:00 AM and 8:45 AM) on Monday, click on Attendance link in the menu and you will get the following automatically:



Attendance

School	Grade	Class	Course	Date
Demo Internation School	Grade One	C1-A	English	mm/dd/yyyy
Demo Internation School	Grade One	C1-A	German	mm/dd/yyyy
Demo Internation School	Grade One	C1-A	Math Group 1	mm/dd/yyyy
Demo Internation School	Grade One	C1-B	Philosophy	mm/dd/yyyy
Demo Internation School	Grade One	C1-B	Physics	mm/dd/yyyy
Demo Internation School	Grade One	C1-B	English	mm/dd/yyyy

According to your schedule, you have the following Current Session in Progress Now:

Demo Internation School > Grade One > C1-A > English

Session Date:	Session Time:
Mon, Sep 26, 2016	08:00 AM - 08:45 AM

ID	Photo	First Name	Last Name					Reset
110		Student1	Parent1	Present	Absent	Excused	Late	reset
111		Student2	Parent2	Present	Absent	Excused	Late	reset
112		Student3	Parent3	Present	Absent	Excused	Late	reset

As you can see, the system has recognized your session and listed the students automatically for you to take attendance.

Now, if all students are present, click on the checkbox on the Present column on the table header and you are done as follows:

According to your schedule, you have the following Current Session in Progress Now:

Demo Internation School > Grade One > C1-A > English	
Session Date: Mon, Sep 26, 2016	**Session Time:** 08:00 AM - 08:45 AM

ID	Photo	First Name	Last Name	☑	☐	☐	☐	Reset
110		Student1	Parent1	Present	Absent	Excused	Late	reset
111		Student2	Parent2	Present	Absent	Excused	Late	reset
112		Student3	Parent3	Present	Absent	Excused	Late	reset

That's it. In just two clicks; one-click access to the students and in the next click you have taken the attendance and done.

Obviously, the one-click access method depends on the time at which you are taken the attendance. If you miss this time, which has to be within the current session timeframe, then you will not be able to use this method. Therefore, the system will provide you with another method to access the students and take attendance for any session in the past. This is method is "take attendance by date".

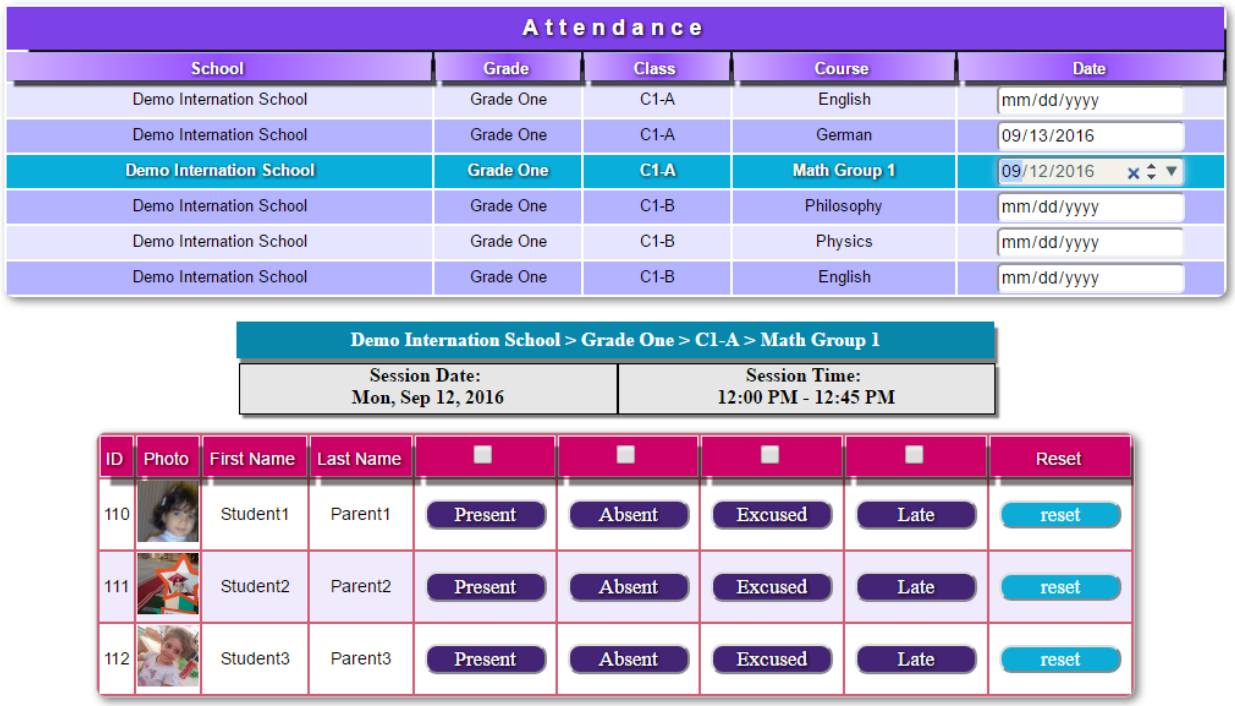
Go to Attendance in the main menu and click the link. You will get the following Attendance table:

Attendance

School	Grade	Class	Course	Date
Demo Internation School	Grade One	C1-A	English	mm/dd/yyyy
Demo Internation School	Grade One	C1-A	German	mm/dd/yyyy
Demo Internation School	Grade One	C1-A	Math Group 1	mm/dd/yyyy
Demo Internation School	Grade One	C1-B	Philosophy	mm/dd/yyyy
Demo Internation School	Grade One	C1-B	Physics	mm/dd/yyyy
Demo Internation School	Grade One	C1-B	English	mm/dd/yyyy

Now decide what course for which you need to retrieve the session and what class to which the students belong and then enter the date of the session. The system will look at the schedule and check if there is a session in the entered date that meets the criteria you have defined.

If the system found one session, it would display the students list directly as follows:



Attendance

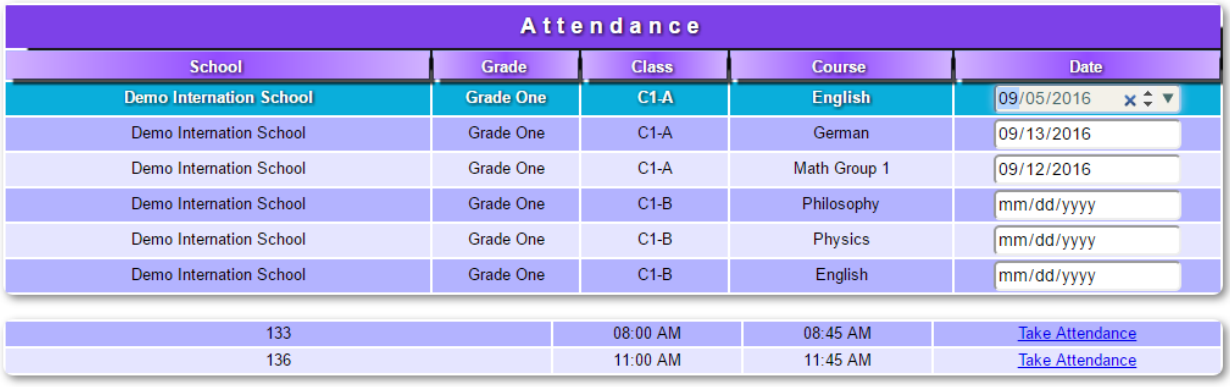
School	Grade	Class	Course	Date
Demo Internation School	Grade One	C1-A	English	mm/dd/yyyy
Demo Internation School	Grade One	C1-A	German	09/13/2016
Demo Internation School	**Grade One**	**C1-A**	**Math Group 1**	09/12/2016
Demo Internation School	Grade One	C1-B	Philosophy	mm/dd/yyyy
Demo Internation School	Grade One	C1-B	Physics	mm/dd/yyyy
Demo Internation School	Grade One	C1-B	English	mm/dd/yyyy

Demo Internation School > Grade One > C1-A > Math Group 1

Session Date: Mon, Sep 12, 2016	Session Time: 12:00 PM - 12:45 PM

ID	Photo	First Name	Last Name					Reset
110		Student1	Parent1	Present	Absent	Excused	Late	reset
111		Student2	Parent2	Present	Absent	Excused	Late	reset
112		Student3	Parent3	Present	Absent	Excused	Late	reset

If the system found more than one session in the same day, it would first display the list of these sessions for you to decide which session you mean like below:

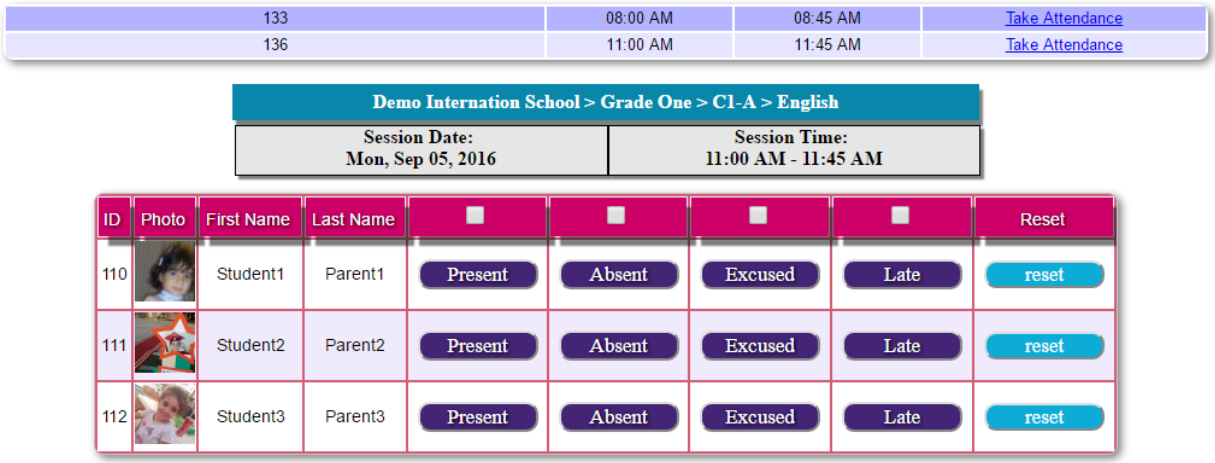


Attendance

School	Grade	Class	Course	Date
Demo Internation School	**Grade One**	**C1-A**	**English**	09/05/2016
Demo Internation School	Grade One	C1-A	German	09/13/2016
Demo Internation School	Grade One	C1-A	Math Group 1	09/12/2016
Demo Internation School	Grade One	C1-B	Philosophy	mm/dd/yyyy
Demo Internation School	Grade One	C1-B	Physics	mm/dd/yyyy
Demo Internation School	Grade One	C1-B	English	mm/dd/yyyy

133	08:00 AM	08:45 AM	Take Attendance
136	11:00 AM	11:45 AM	Take Attendance

Select the session from the list and the system will then list the students as follows:



133	08:00 AM	08:45 AM	Take Attendance
136	11:00 AM	11:45 AM	Take Attendance

Demo Internation School > Grade One > C1-A > English

Session Date:	Session Time:
Mon, Sep 05, 2016	11:00 AM - 11:45 AM

ID	Photo	First Name	Last Name	☐	☐	☐	☐	Reset
110		Student1	Parent1	Present	Absent	Excused	Late	reset
111		Student2	Parent2	Present	Absent	Excused	Late	reset
112		Student3	Parent3	Present	Absent	Excused	Late	reset

You can choose to mark all students at once with one click if you check one of the four checkboxes in the students' list table header as follows:

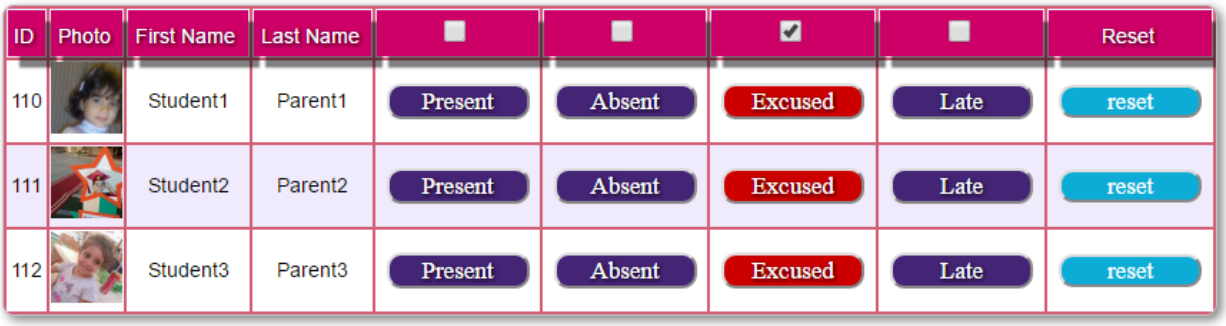
If they are all present:

ID	Photo	First Name	Last Name	☑	☐	☐	☐	Reset
110		Student1	Parent1	Present	Absent	Excused	Late	reset
111		Student2	Parent2	Present	Absent	Excused	Late	reset
112		Student3	Parent3	Present	Absent	Excused	Late	reset

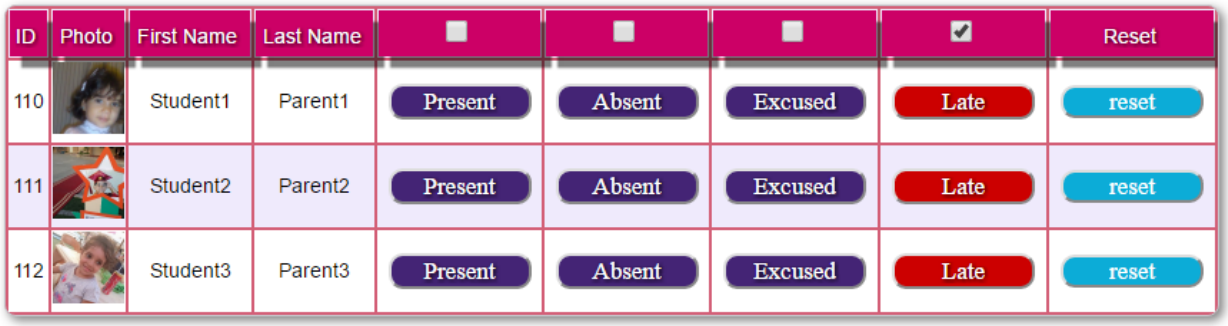
If they are all absent:

ID	Photo	First Name	Last Name	☐	☑	☐	☐	Reset
110		Student1	Parent1	Present	Absent	Excused	Late	reset
111		Student2	Parent2	Present	Absent	Excused	Late	reset
112		Student3	Parent3	Present	Absent	Excused	Late	reset

If they are all excused:

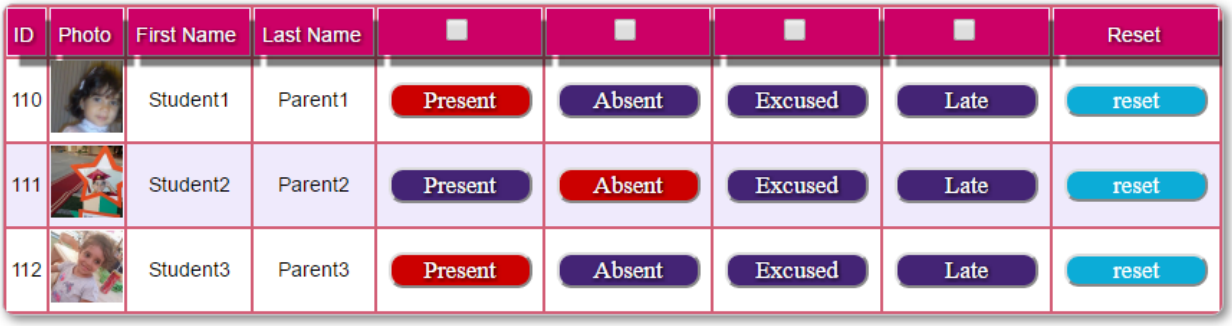


Or if they are all late:



Note that there are no further actions required. Once you check the checkbox then the attendance are taken and the students' attendance is graded.

In case the students are all present except some of them, you can quickly check the Present checkbox to mark them all as present and then change the status of the exceptions like below:



Or you can take the attendance one by one by clicking one of the four buttons next to each student.

Note that there are no further actions required. Once you click on any of the four buttons then the attendance is taken and the students' attendance is graded. No need to submit a form or take any further action whatsoever.

You can also remove the attendance status and its grading by clicking Reset button next to the student for whom you would like to remove the attendance.

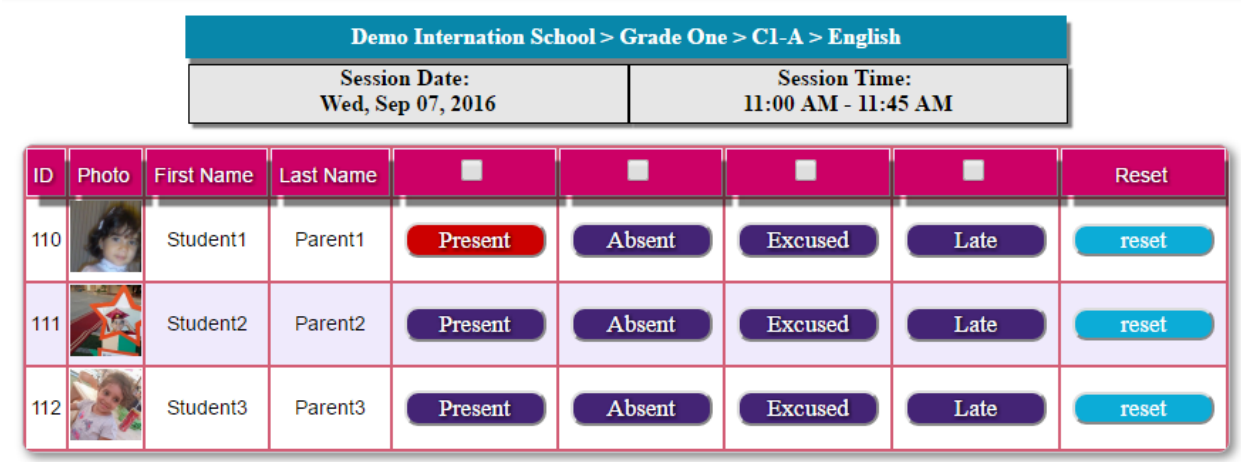
Important Rules:

- No attendance can be taken in the future
- No attendance can be taken in the weekend days
- No attendance can be taken in National Holidays
- No attendance can be taken in Days-Off
- No attendance can be taken in the weekend days
- Attendance has to be taken in a term. If there are no terms, then attendance has to be taken within a school year.

Now let's see how the attendance is being graded.

We will take attendance for Student1 in English course for 4 sessions with different statuses.

We will take attendance for the first session as follows:



Since the Present status has a grade of 10 and since the attendance grade is 10 in English course then the student grade in this session will be 10 out of 10.

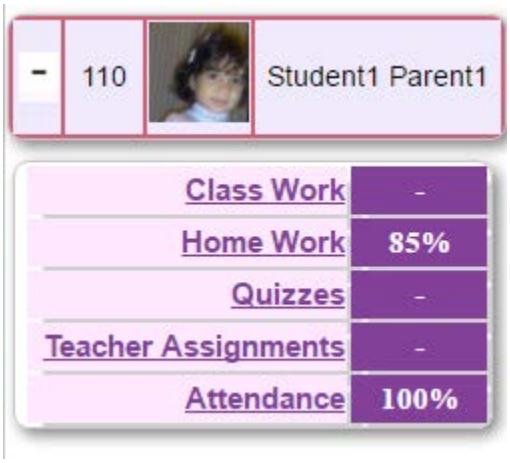
Check the Grading Report from Grading > Grading Reports > Get Grading Report:

Demo Internation School > Grade One > C1-A > English

English Grading Report - Year 2016-2017

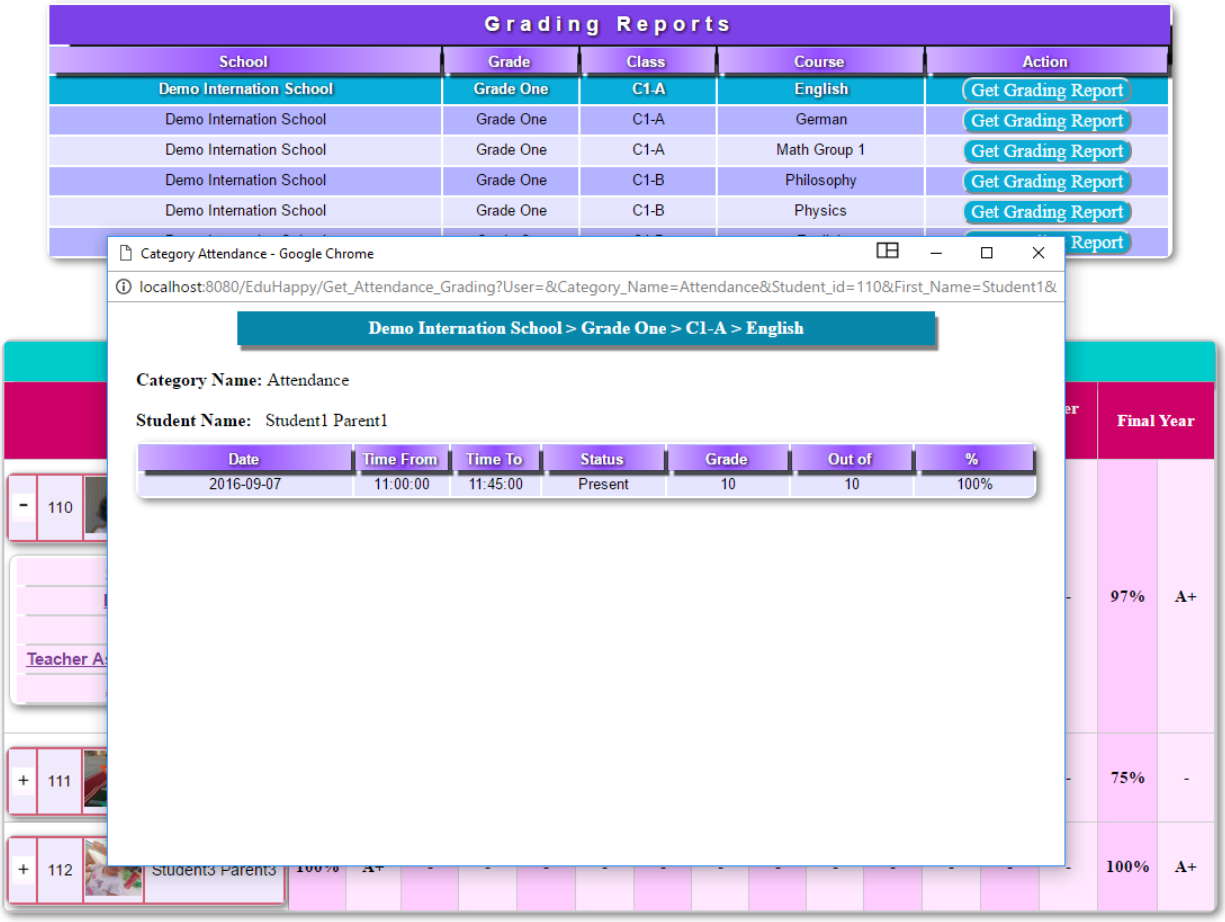
Course	GTerm 1		GSemester One Exam Grade		GSemester One		GTerm 2		GTerm 3		GSemester Two Exam Grade		GSemester Two		Final Year	
- 110 Student1 Parent1 Class Work - Home Work 85% Quizzes - Teacher Assignments - Attendance 100%	97%	A+	-	-	-	-	-	-	-	-	-	-	-	-	97%	A+
+ 111 Student2 Parent2	75%	-	-	-	-	-	-	-	-	-	-	-	-	-	75%	-
+ 112 Student3 Parent3	100%	A+	-	-	-	-	-	-	-	-	-	-	-	-	100%	A+

Look at the Attendance under Student1.

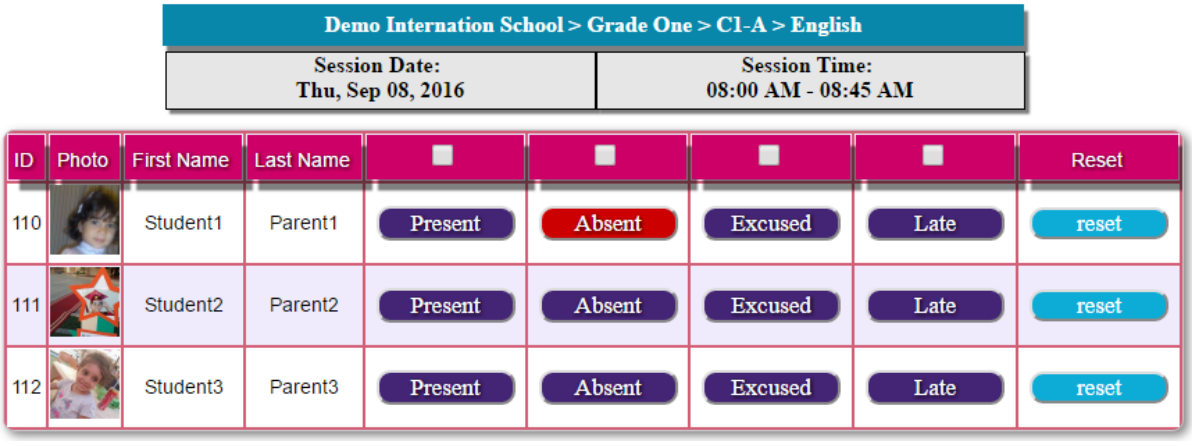


You can see it is 100%.

Click on the Attendance link and you will get the following screen:



Let's take attendance for the second session as follows:



Since Absent status has a grade 5 in English course, then the student grade in this session will be 5 out of 10.

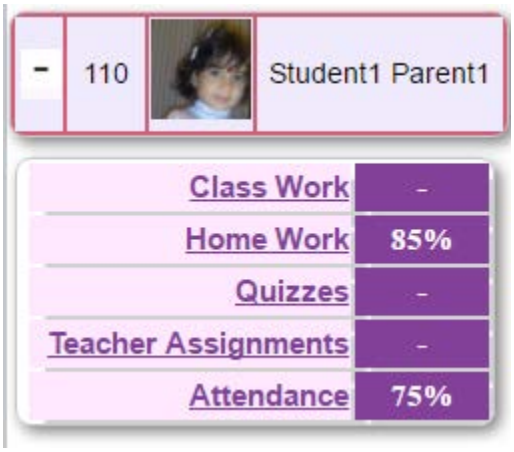
Let’s check the grading report again:

Demo Internation School > Grade One > C1-A > English

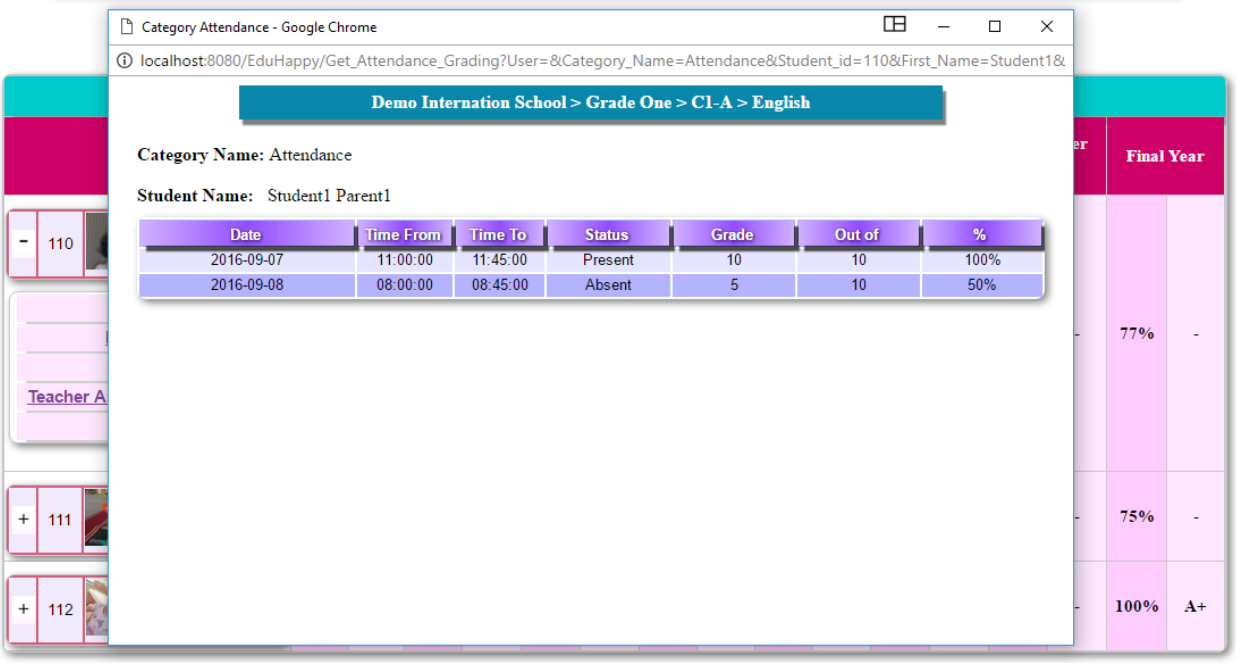
English Grading Report - Year 2016-2017

Course	GTerm 1		GSemester One Exam Grade		GSemester One		GTerm 2		GTerm 3		GSemester Two Exam Grade		GSemester Two		Final Year	
- 110 Student1 Parent1 Class Work - Home Work 85% Quizzes - Teacher Assignments - Attendance 75%	77%	-	-	-	-	-	-	-	-	-	-	-	-	-	77%	-
+ 111 Student2 Parent2	75%	-	-	-	-	-	-	-	-	-	-	-	-	-	75%	-
+ 112 Student3 Parent3	100%	A+	-	-	-	-	-	-	-	-	-	-	-	-	100%	A+

Look at the attendance. It’s now 75%.

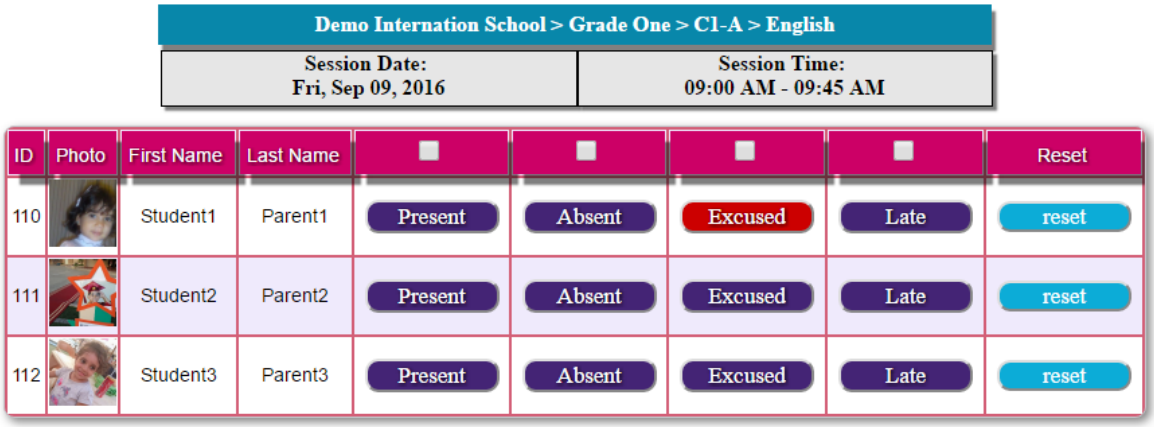


Click on Attendance link and you will get the following:



As you can see, you have two sessions, one is present with 100% and the second is absent with 50%. If you add (10+5) and divide them by (10+10) you get 15 over 20 which is 75%.

Let's take attendance for the third session as follows:



Since Excused status has a grade 8 in the English course then the student grade in this session will be 8 out of 10.

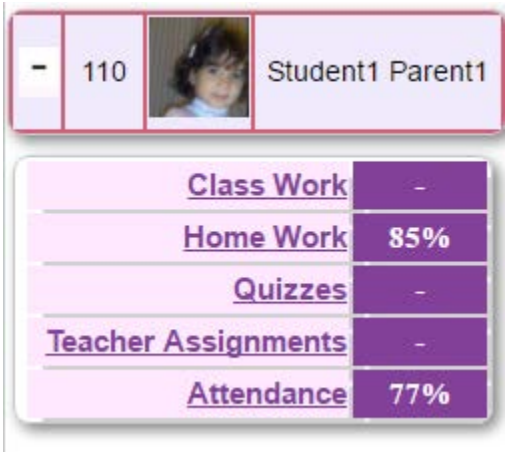
Let's check the grading report again:

Demo Internation School > Grade One > C1-A > English

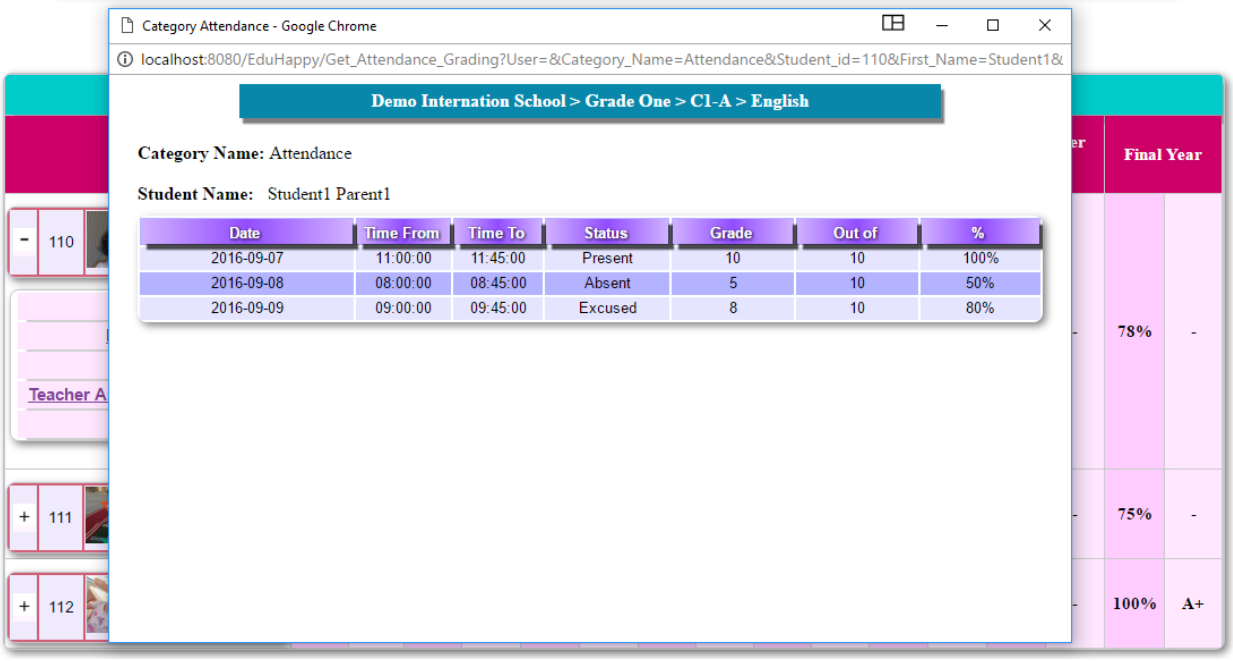
English Grading Report - Year 2016-2017

Course	GTerm 1		GSemester One Exam Grade		GSemester One		GTerm 2		GTerm 3		GSemester Two Exam Grade		GSemester Two		Final Year	
- 110 Student1 Parent1 Class Work - Home Work 85% Quizzes - Teacher Assignments - Attendance 77%	78%	-	-	-	-	-	-	-	-	-	-	-	-	-	78%	-
+ 111 Student2 Parent2	75%	-	-	-	-	-	-	-	-	-	-	-	-	-	75%	-
+ 112 Student3 Parent3	100%	A+	-	-	-	-	-	-	-	-	-	-	-	-	100%	A+

Look at the attendance. It's now 77%.

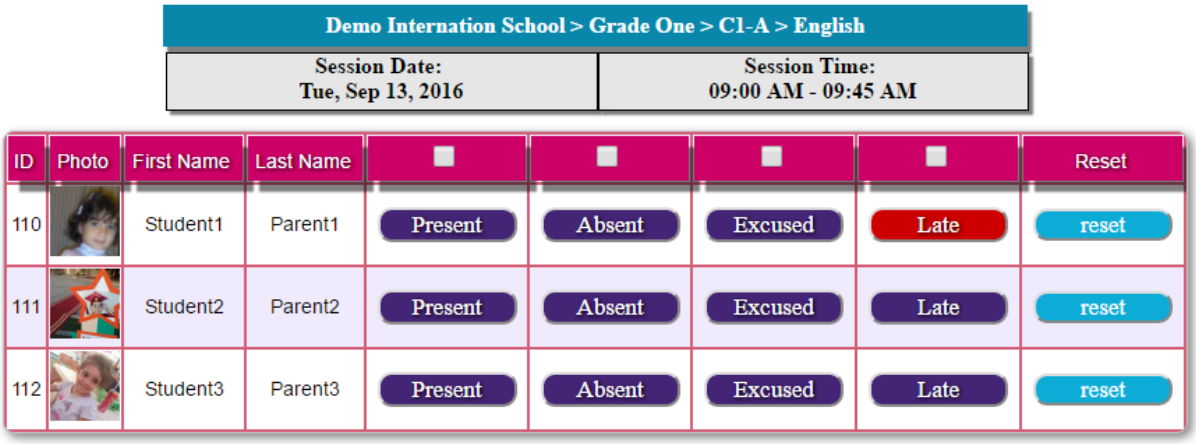


Click on Attendance link and you will get the following:



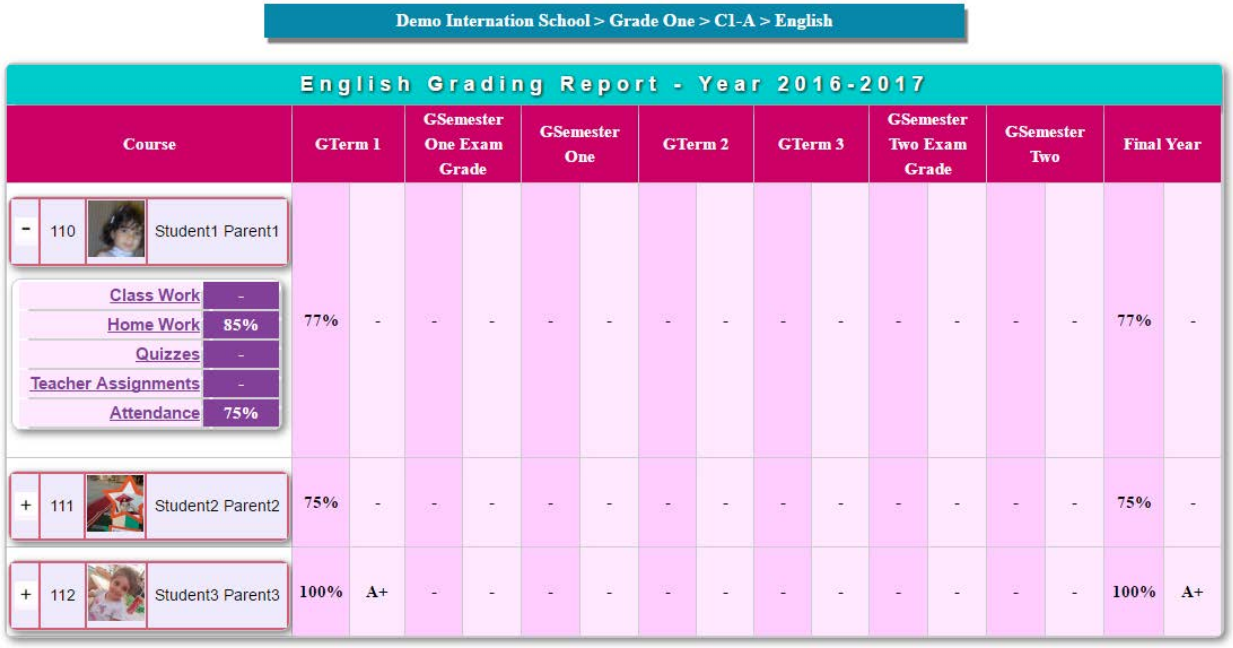
Add (10+5+8) and divide this by (10+10+10) > 23 over 30 which gives 76.6% rounded to 77%.

Finally, the fourth session:



Since Late status has a grade 7 in the English course then the student grade in this session will be 7 out of 10.

Let's check the grading report again:



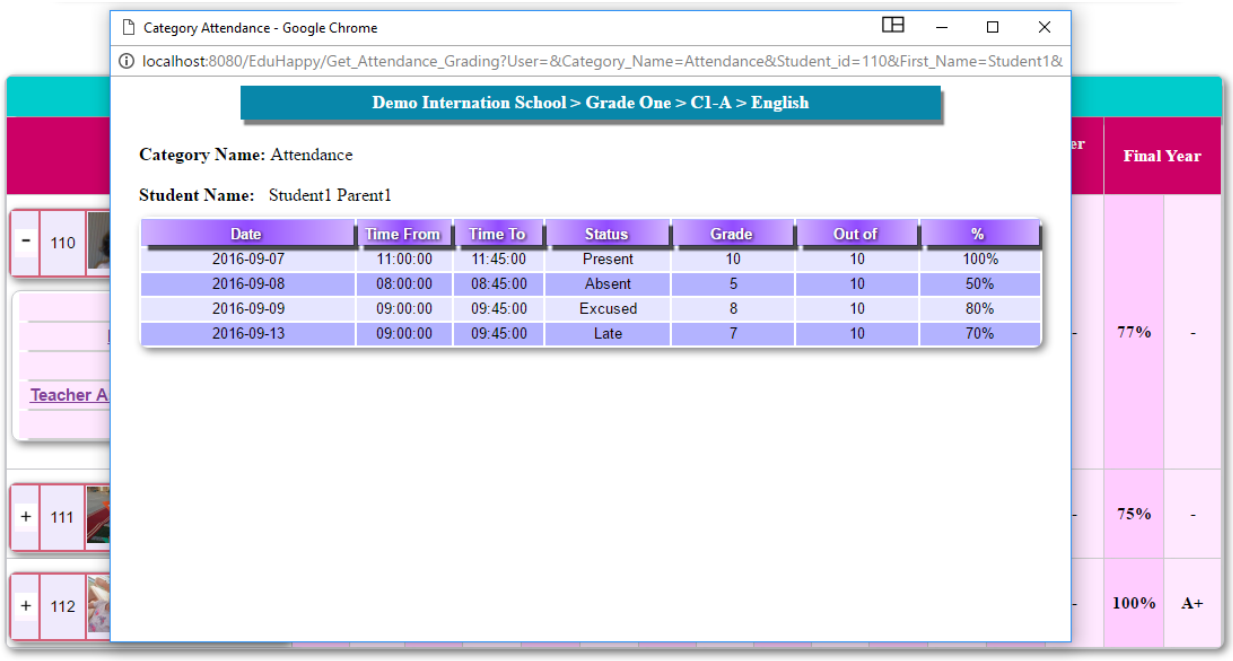
Demo Internation School > Grade One > C1-A > English

English Grading Report - Year 2016-2017

Course	GTerm 1		GSemester One Exam Grade		GSemester One		GTerm 2		GTerm 3		GSemester Two Exam Grade		GSemester Two		Final Year	
- 110 Student1 Parent1	77%	-	-	-	-	-	-	-	-	-	-	-	-	-	77%	-
Class Work -																
Home Work 85%																
Quizzes -																
Teacher Assignments -																
Attendance 75%																
+ 111 Student2 Parent2	75%	-	-	-	-	-	-	-	-	-	-	-	-	-	75%	-
+ 112 Student3 Parent3	100%	A+	-	-	-	-	-	-	-	-	-	-	-	-	100%	A+

Look at the Attendance. It's now 75%.

Click on Attendance link and you will get the following:



Category Attendance - Google Chrome

localhost:8080/EduHappy/Get_Attendance_Grading?User=&Category_Name=Attendance&Student_id=110&First_Name=Student1&

Demo Internation School > Grade One > C1-A > English

Category Name: Attendance

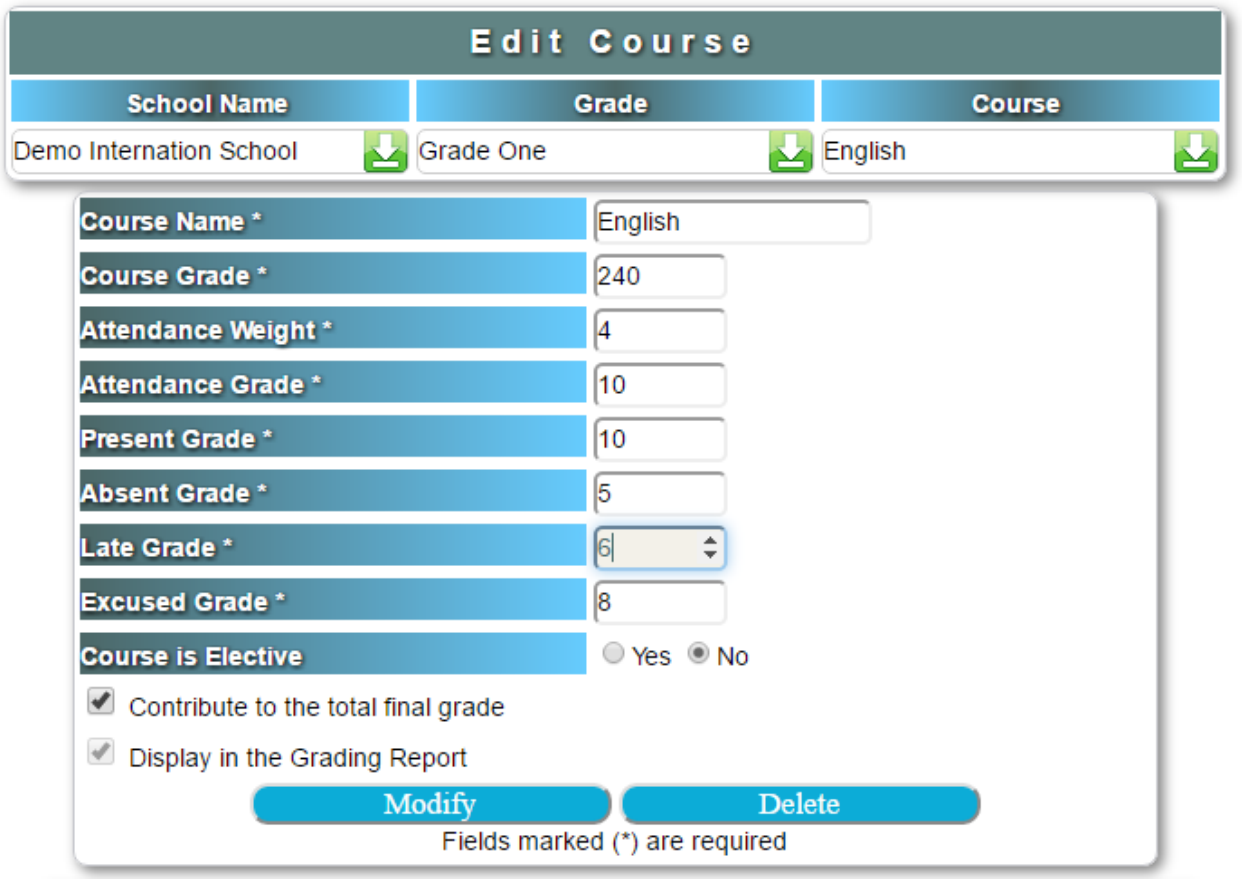
Student Name: Student1 Parent1

Date	Time From	Time To	Status	Grade	Out of	%
2016-09-07	11:00:00	11:45:00	Present	10	10	100%
2016-09-08	08:00:00	08:45:00	Absent	5	10	50%
2016-09-09	09:00:00	09:45:00	Excused	8	10	80%
2016-09-13	09:00:00	09:45:00	Late	7	10	70%

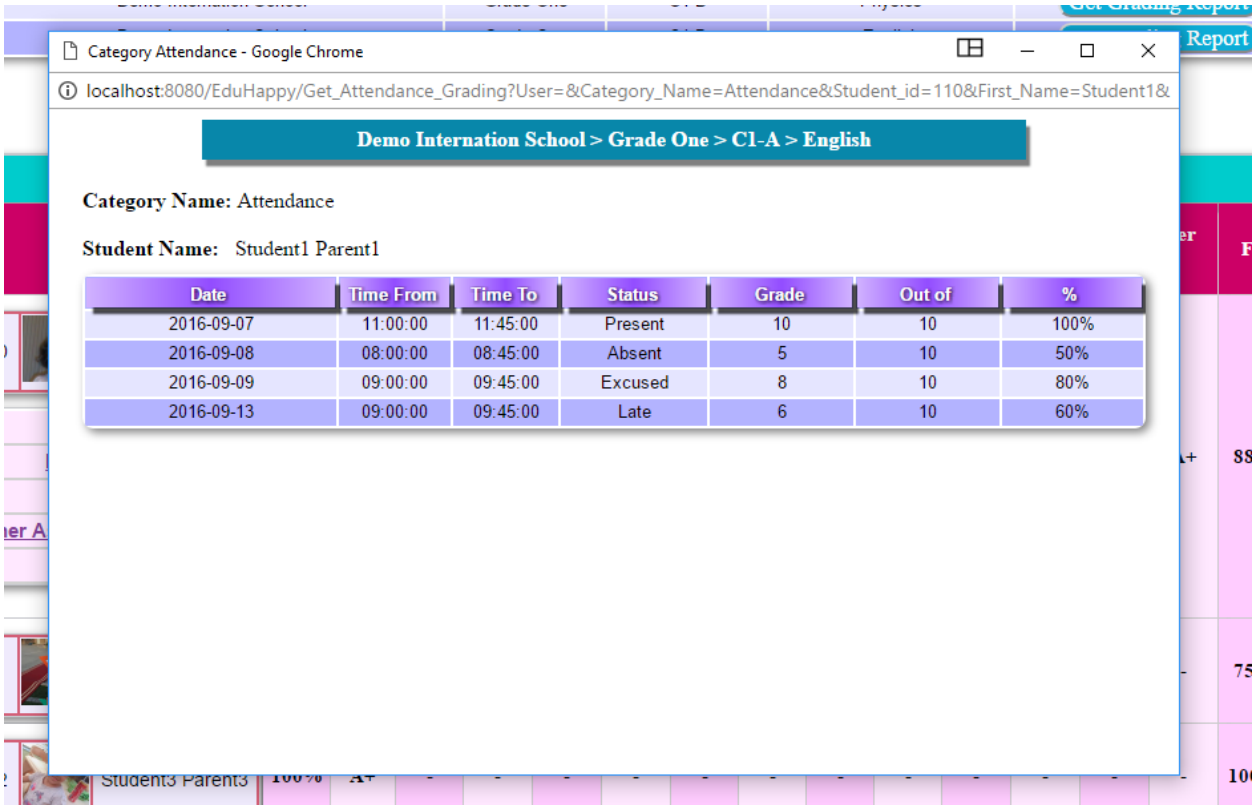
Add the four sessions' grades altogether (10+5+8+7) and divide them by (10+10+10+10) > 30 over 40 which give 75%.

Important Rule:

If the Admin changed any one of the attendance statuses, Grade, after the class teacher has taken the attendance for the students, the system would change the students grading in all the sessions that were marked with that status accordingly and automatically. For Example, in our previous scenario since Late status has a grade 7 in the English course then the student grade in this session was 7 out of 10. Now, let's change "Late"status grade in the Edit Course form from 7 to 6 as below:



Now check the student grade for that session:



As you can notice, session marked as “Late” is now graded as 6 out of 10 instead of 7 out of 10.

We will change it back to 7 to continue our examples.

So now the student grade for the attendance in the English course is so far 75%.

But what is the impact of this on the course grading itself?

Let's see first what we have:

We have 3 assignments graded in Home Work Category. Remember that Home Work category has weight 1.

We have zero assignments graded in Class Work, Quizzes, and Teacher Assignments. That means these categories weights won't be counted.

We have Attendance with weight 4.

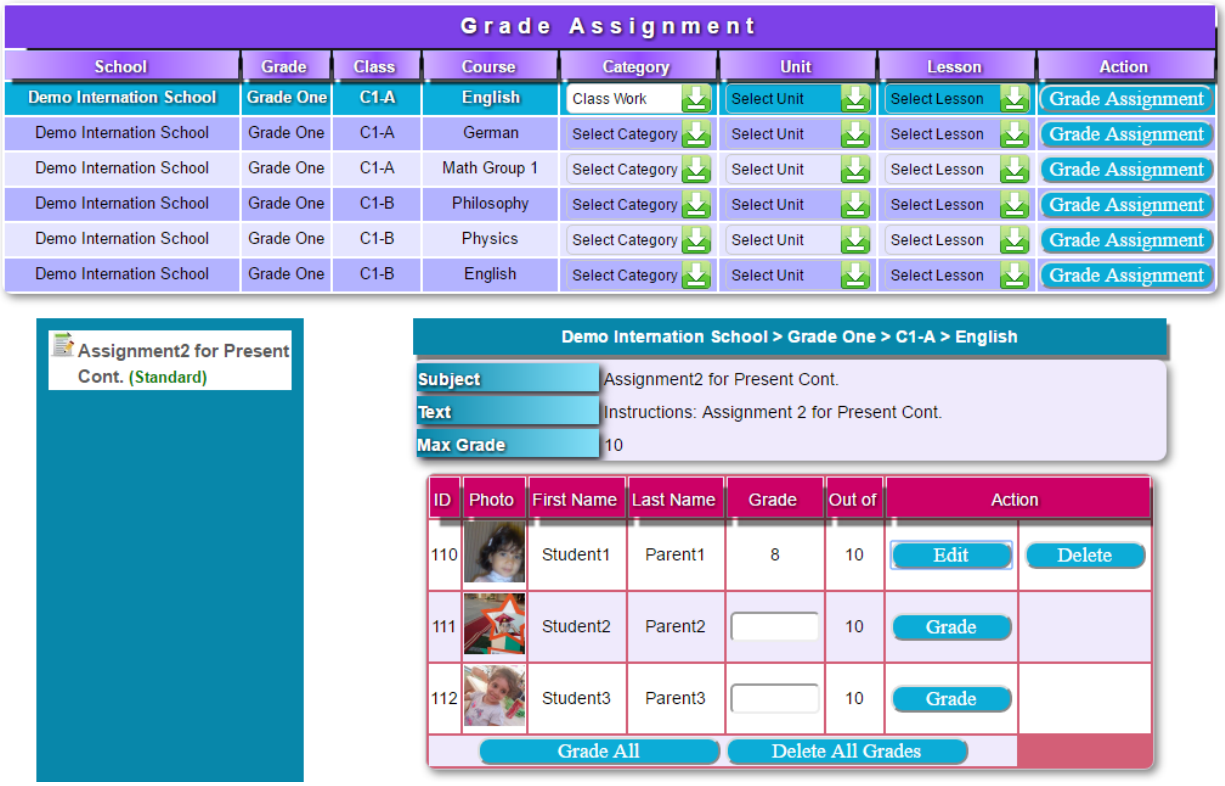
We don't have any semester exams yet.

Therefore, the calculations will be as follows:

1. If the English course grade is 240. This 240 will be divided by the sum of all categories weights that counts as well as the attendance weight. In this scenario, the only category to be counted is the Home Work category which is the only category that has graded assignments. Home Work Category weight is 1 while attendance weight is 4. That means 240 divided by (1+4). That gives 48.
2. In homework, since we have these three assignments A1, A2 and A3 and the category grade was calculated earlier and gave 86%. Then 0.86 will be multiplied by 48 multiplied by 1 (the weight of the homework assignment category). That gives 41.28
3. In attendance, it's already 75%. Then 0.75 will be multiplied by 41.28 multiplied by 4 (the attendance weight). That is (0.75*48*4) gives 144
4. Now let's add the results altogether. That is 41.28 + 144 = 185.28
5. Finally, divide 185.28 by the course grade (240). That is 185.28 over 240 = 0.772
6. That means the student grade percentage in English course is now 77% as shown above in the grading report.

To elaborate more, let's grade some assignments in Class Work and then recalculate.

As shown below, we have graded an assignment under Class Work and Student1 grade in that assignment was 8 out of 10



Grade Assignment

School	Grade	Class	Course	Category	Unit	Lesson	Action
Demo Internation School	Grade One	C1-A	English	Class Work	Select Unit	Select Lesson	Grade Assignment
Demo Internation School	Grade One	C1-A	German	Select Category	Select Unit	Select Lesson	Grade Assignment
Demo Internation School	Grade One	C1-A	Math Group 1	Select Category	Select Unit	Select Lesson	Grade Assignment
Demo Internation School	Grade One	C1-B	Philosophy	Select Category	Select Unit	Select Lesson	Grade Assignment
Demo Internation School	Grade One	C1-B	Physics	Select Category	Select Unit	Select Lesson	Grade Assignment
Demo Internation School	Grade One	C1-B	English	Select Category	Select Unit	Select Lesson	Grade Assignment

Assignment2 for Present Cont. (Standard)

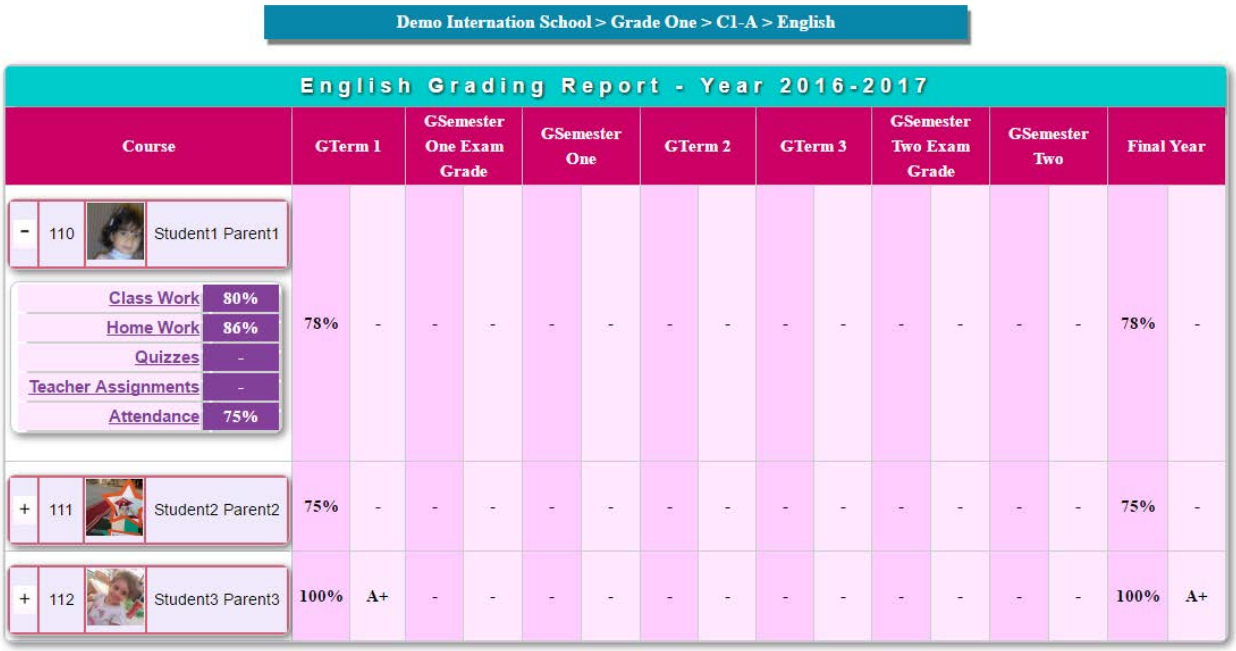
Demo Internation School > Grade One > C1-A > English

Subject	Assignment2 for Present Cont.
Text	Instructions: Assignment 2 for Present Cont.
Max Grade	10

ID	Photo	First Name	Last Name	Grade	Out of	Action	
110		Student1	Parent1	8	10	Edit	Delete
111		Student2	Parent2		10	Grade	
112		Student3	Parent3		10	Grade	

Grade All | Delete All Grades

Let's check the grading report now after this change:



Demo Internation School > Grade One > C1-A > English

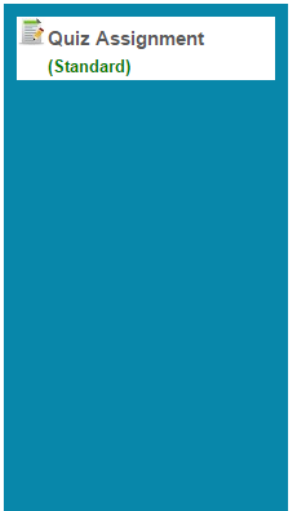
English Grading Report - Year 2016-2017

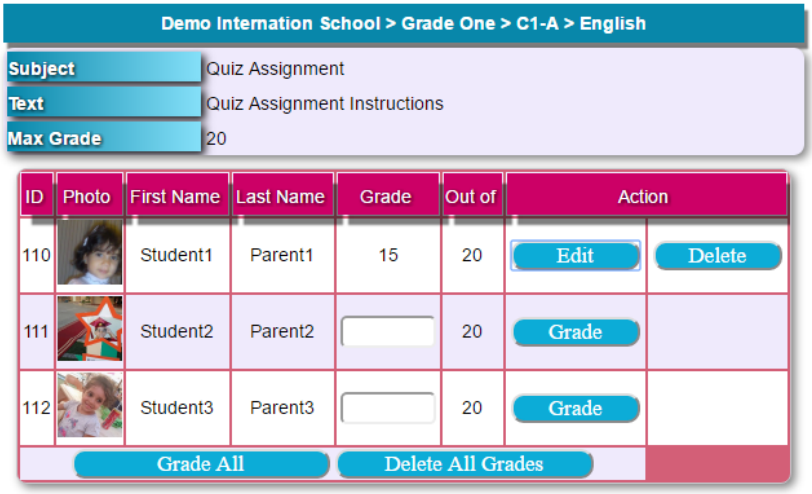
Course	GTerm 1		GSemester One Exam Grade		GSemester One		GTerm 2		GTerm 3		GSemester Two Exam Grade		GSemester Two		Final Year	
− 110 Student1 Parent1	78%	-	-	-	-	-	-	-	-	-	-	-	-	-	78%	-
Class Work 80%																
Home Work 86%																
Quizzes -																
Teacher Assignments -																
Attendance 75%																
+ 111 Student2 Parent2	75%	-	-	-	-	-	-	-	-	-	-	-	-	-	75%	-
+ 112 Student3 Parent3	100%	A+	-	-	-	-	-	-	-	-	-	-	-	-	100%	A+

Let's recalculate as follows:

1. If the English course grade is 240. This 240 will be divided by the sum of all categories weights that counts as well as the attendance weight. Now Class Work will be counted since it has a graded assignment along with Home Work category weight. That means 240 divided by (1+2+4). That gives 34.2857.
2. In homework, since the category grade is 86%. Then 0.86 will be multiplied by 34.2857 multiplied by 1 (the weight of the homework assignment category). That gives 29.4857
3. In Class Work, it has one assignment graded as 8 out of 10 which is 80%. We will multiply 0.8 by 34.2857 by 2 (the Class Work category weight). That is 54.857
4. In attendance, it's already 75%. Then 0.75 will be multiplied by 34.2857 multiplied by 4 (the attendance weight). That is (0.75*34.2857 *4) gives 102.8571
5. Now let's add the results altogether. That is 29.4857 + 54.857 + 102.8571 = 187.2
6. Finally, divide 187.2 by the course grade (240). That is 187.2 / 240 = 0.78
7. That means the student grade percentage in English course is now 78% as shown above in the grading report.

To elaborate with more examples, let's grade some assignments in the remaining two categories; the Quizzes category and the Teacher Assignments category and see what happens.





Let's check the grading report now after this change:

Demo Internation School > Grade One > C1-A > English

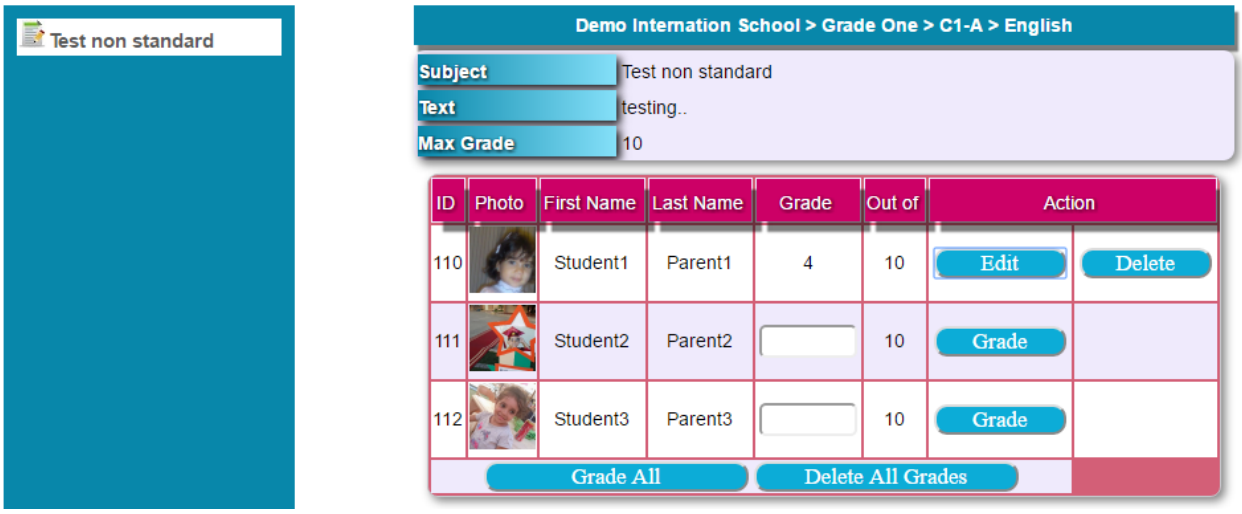
English Grading Report - Year 2016-2017

Course	GTerm 1		GSemester One Exam Grade		GSemester One		GTerm 2		GTerm 3		GSemester Two Exam Grade		GSemester Two		Final Year	
- 110 Student1 Parent1 Class Work 80% Home Work 86% Quizzes 75% Teacher Assignments - Attendance 75%	77%	-	-	-	-	-	-	-	-	-	-	-	-	-	77%	-
+ 111 Student2 Parent2	75%	-	-	-	-	-	-	-	-	-	-	-	-	-	75%	-
+ 112 Student3 Parent3	100%	A+	-	-	-	-	-	-	-	-	-	-	-	-	100%	A+

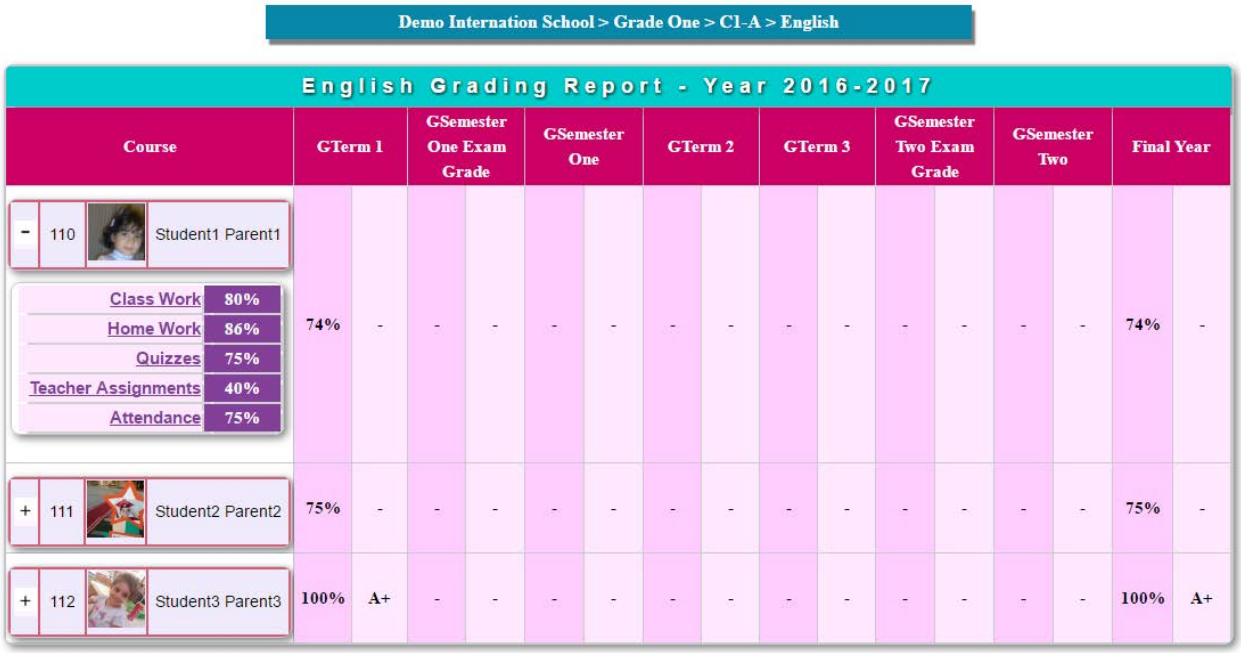
Let's recalculate as follows:

1. If the English course grade is 240. This 240 will be divided by the sum of all categories weights that counts as well as the attendance weight. Now Quizzes category will be counted since it has a graded assignment along with Home Work and Class Work categories weights. That means 240 divided by (1+2+3+4). That gives 24.
2. In homework, since the category grade is 86%. Then 0.86 will be multiplied by 24 multiplied by 1 (the weight of the homework assignment category). That gives 20.64
3. In Class Work, it has one assignment graded as 8 out of 10 which is 80%. We will multiply 0.8 by 24 by 2 (the Class Work category weight). That is 38.4
4. In Quizzes category, we have graded one assignment as 15 out of 20 which is 75%. Then 0.75 will be multiplied by 24 by 3 (the weight of Quizzes category). That gives 54.
5. In attendance, it's already 75%. Then 0.75 will be multiplied by 24 multiplied by 4 (the attendance weight). That is (0.75*24 *4) gives 72
6. Now let's add the results altogether. That is 20.64 + 38.4 + 54 + 72 = 185.04 around 185
7. Finally, divide 185 by the course grade (240). That is 185 / 240 = 0.77
8. That means the student grade percentage in English course is now 77% as shown above in the grading report.

Let's give the final example with Teacher Assignments category added to the calculations. We will grade an assignment under Teacher Assignments category as follows:



Let's check the grading report now after this change:



Let's recalculate as follows:

1. If the English course grade is 240. This 240 will be divided by the sum of all categories weights that counts as well as the attendance weight. Now Teacher Assignments category will be counted since it has a graded assignment along with Home Work, Class Work, and Quizzes categories weights. That means 240 divided by (1+2+3+1+4). That gives 21.82.

2. In homework, since the category grade is 86%. Then 0.86 will be multiplied by 21.82 multiplied by 1 (the weight of the homework assignment category). That gives 18.76
3. In Class Work, it has one assignment graded as 8 out of 10 which is 80%. We will multiply 0.8 by 21.82 by 2 (the Class Work category weight). That is 34.9
4. In Quizzes category, we have graded one assignment 15 out of 20 which is 75%. Then 0.75 will be multiplied by 21.82 by 3 (the weight of Quizzes category). That gives 49.1.
5. In Teacher Assignments, we have graded one assignment 4 out of 10 which is 40%. Then 40% will be multiplied by 21.82 by 1 (the weight of Teacher Assignment category). That will give 8.728
6. In attendance, it's already 75%. Then 0.75 will be multiplied by 21.82 multiplied by 4 (the attendance weight). That gives 65.46
7. Now let's add the results altogether. That is 18.76 + 34.9 + 49.1 + 8.728 + 65.46= 176.948 around 177
8. Finally, divide 177 by the course grade (240). That is 177 / 240 = 0.7375 rounded to 0.74
9. That means the student grade percentage in English course is now 74% as shown above in the grading report.

Semester Exam

Semester Exam is an important element in the grading system and its calculations.

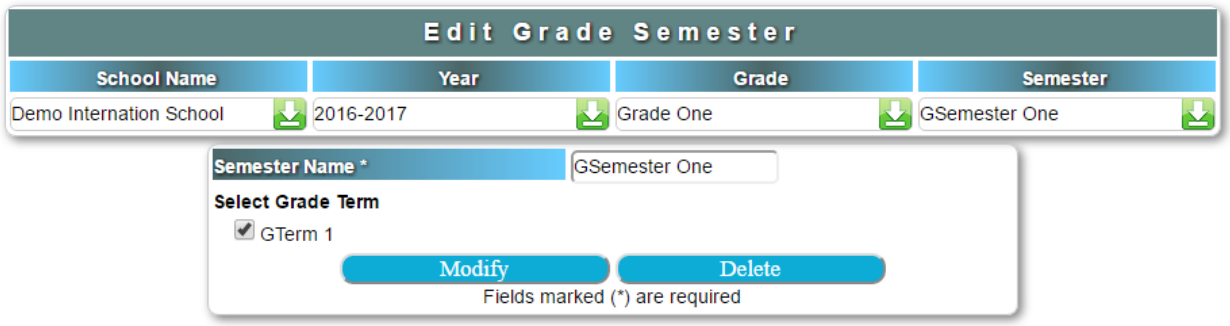
We have discussed before why we separate the semester exam from other grading elements in the system. We consider it as a grading category by itself because of its importance.

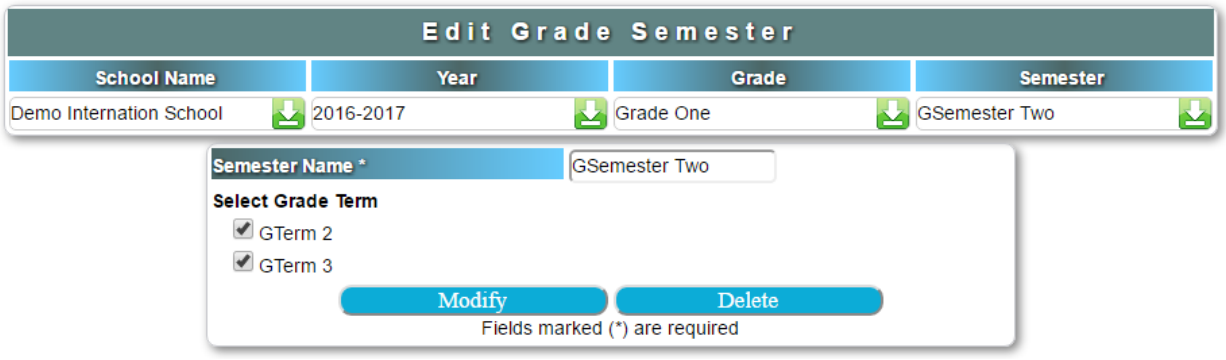
Having said that, we believe the semester exam might have really high weight, hence high impact on the grading.

We will discuss how to grade a semester exam which is easy and straightforward process and then we will see the impact of grading the semester exam on the grading calculations.

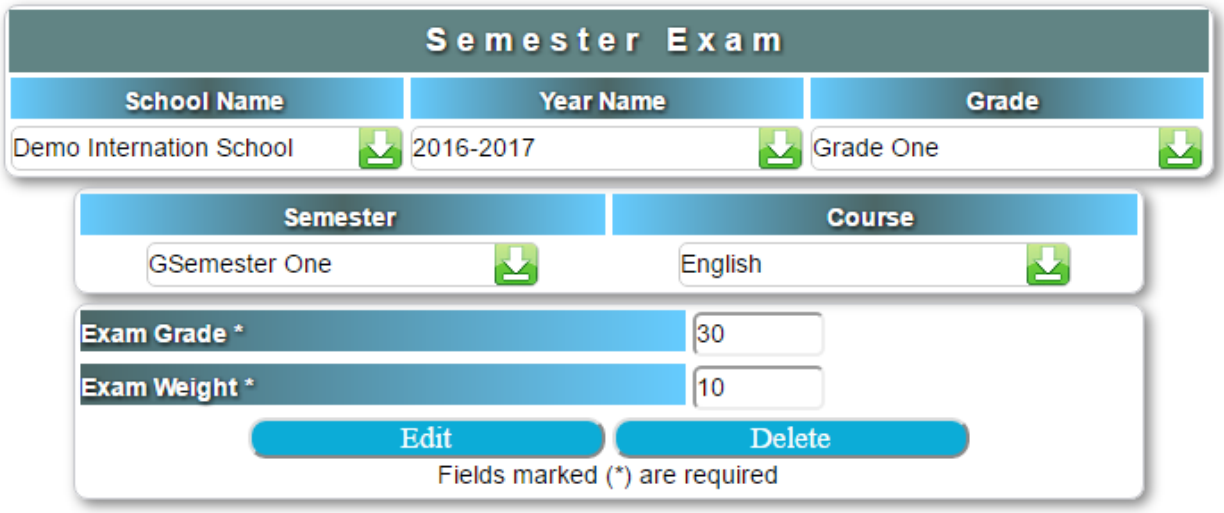
In order to grade a semester exam, you must be a class teacher. Also, there must be semesters linked to the grade under which you are grading the semester exam. Finally, there must be semester exam created by the Admin in the first place.

Remember, as Admin, we have created, under Grade One, three Grade Terms and two semesters and linked the semesters to those terms as follows:



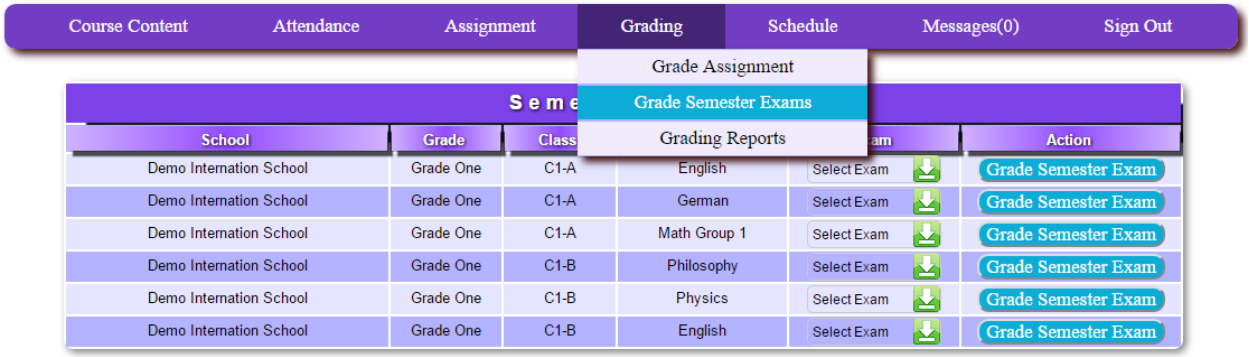


We also have created semester exam for English course as follows:

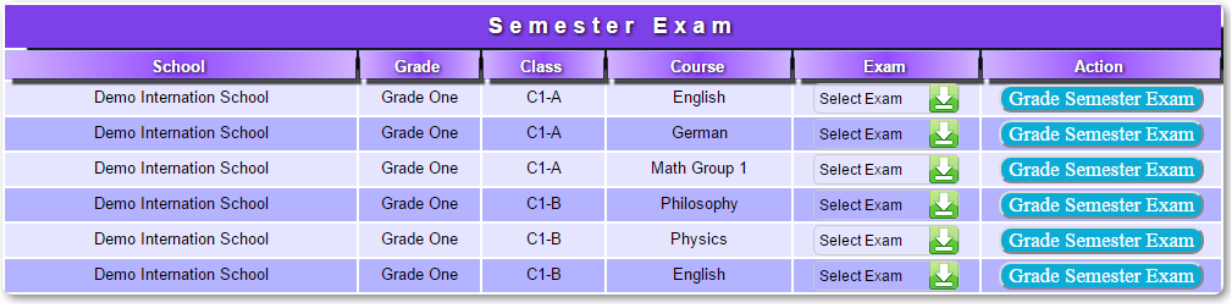


Now, since we have everything set from the Admin side, then you as a class teacher can now evaluate and grade the semester exam.

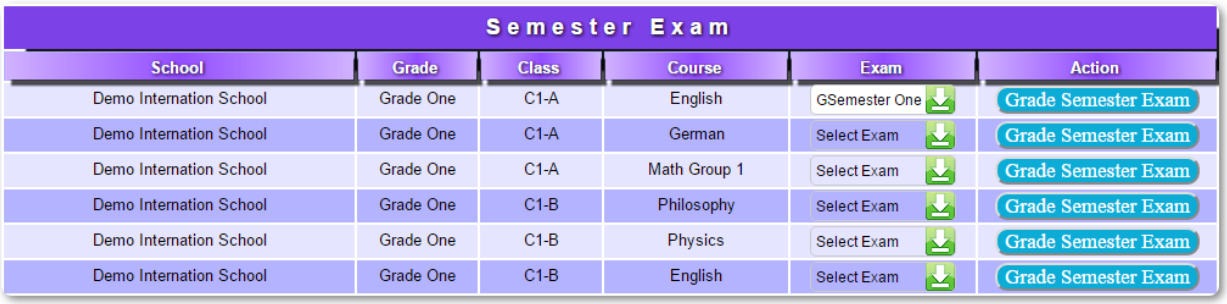
To grade the semester exam, go to Grading > Grade Semester Exams as follows:



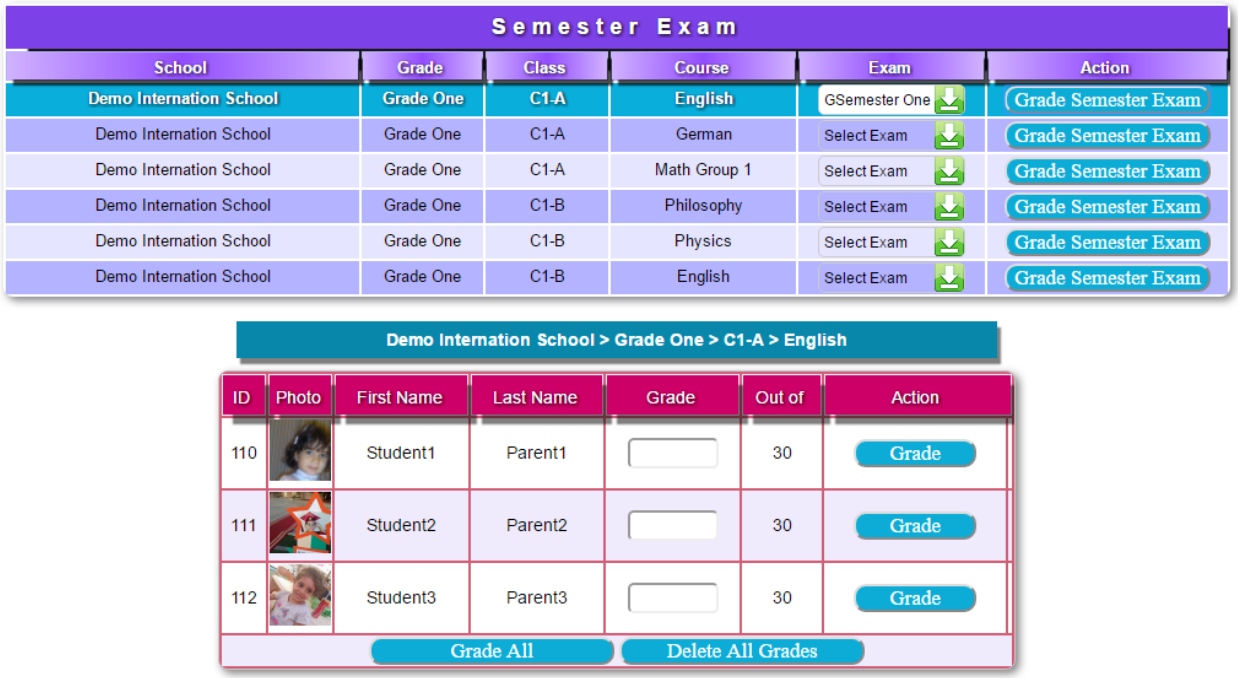
You will get the following Semester Exam table:



You have Grade Semester Exam button next to class authority item in the table. You need first to select the Exam from the Exam drop down list next to Demo International School > Grade One > C1-A > English as follows:

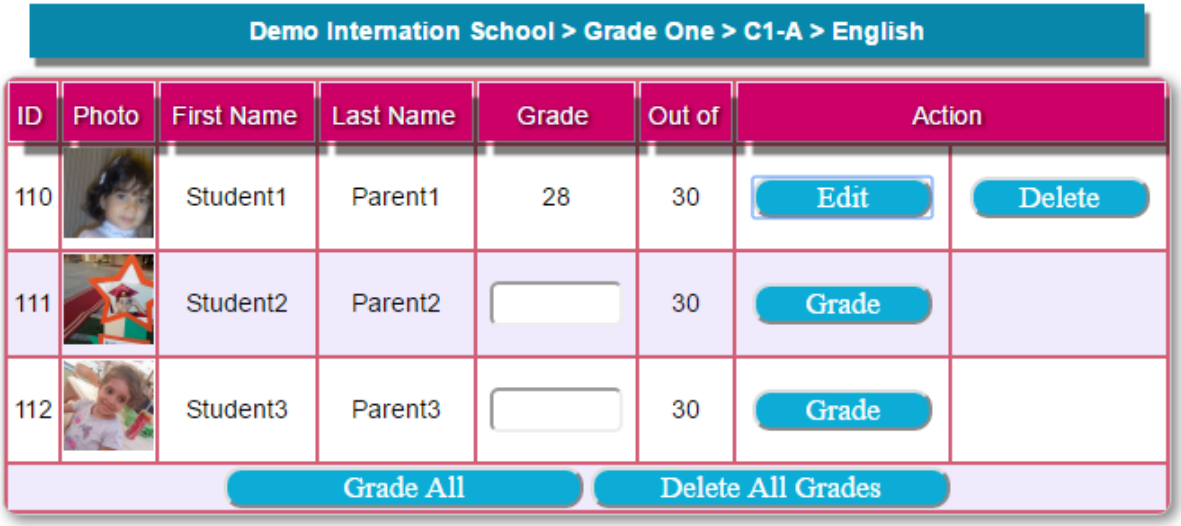


Now click on Grade Semester Exam button in the same row. The system will display the following form:



You are now able to grade any student for the selected semester exam.

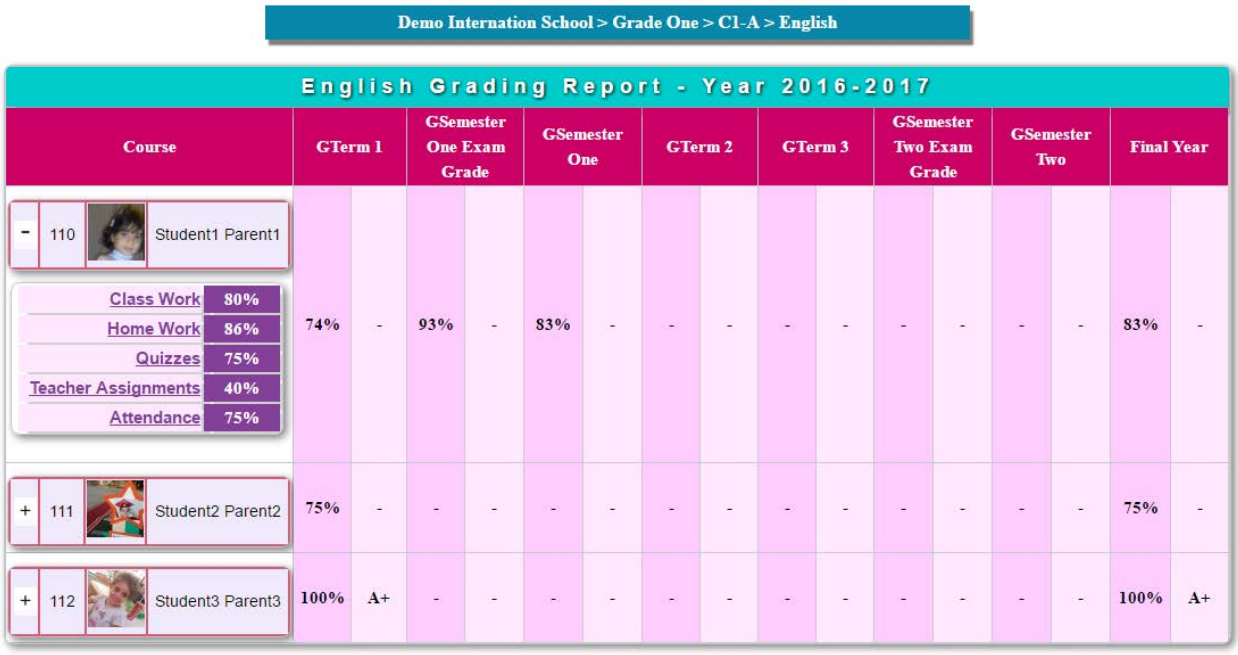
Let's grade Student1 as follows:



That's it. You have graded the student for the semester exam you have selected.

Now let's check the grading report after we have done these changes.

Go to Grading > Grading Reports:



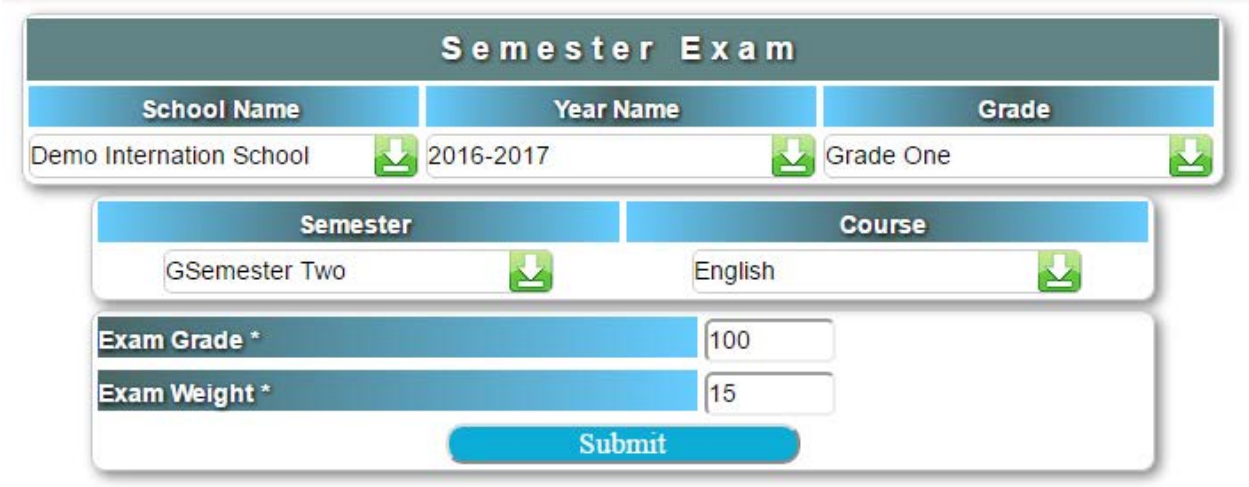
Let's recalculate as follows:

1. If the English course grade is 240. This 240 will be divided by the sum of all categories weights that counts as well as the attendance weight. Now Exam Semester for

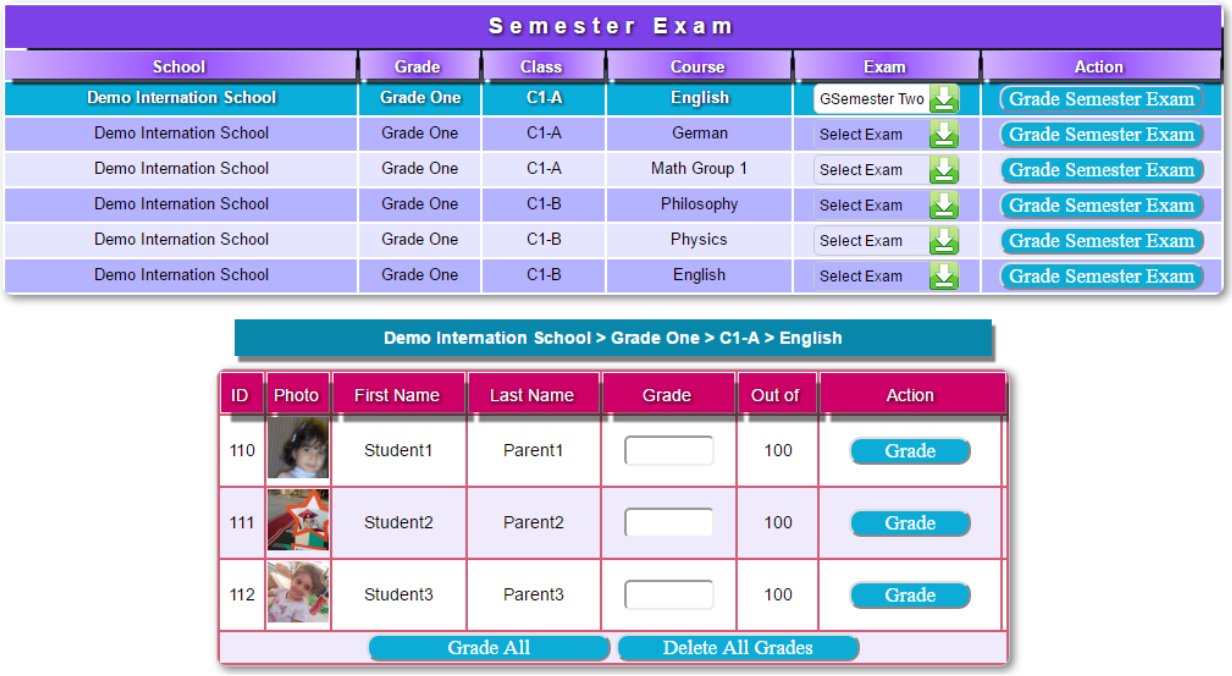
GSemester One will be counted since it has been graded. That means 240 will now have to be divided by (1+2+3+1+4+10). Note that the semester exam for GSemester One has weight 10. So, 240 divided by 21. That gives 11.43.

2. In homework, since the category grade is 86%. Then 0.86 will be multiplied by 11.43 multiplied by 1 (the weight of the homework assignment category). That gives 9.83.
3. In Class Work, its grade is 80%. We will multiply 0.8 by 11.43 by 2 (the Class Work category weight). That is 18.3.
4. In Quizzes category, its grade is 75%. Then 0.75 will be multiplied by 11.43 by 3 (the weight of Quizzes category). That gives 25.72.
5. In Teacher Assignments, its grade is 40%. Then 40% will be multiplied by 11.43 by 1 (the weight of Teacher Assignment category). That will give 4.57.
6. In attendance, it's already 75%. Then 0.75 will be multiplied by 11.43 multiplied by 4 (the attendance weight). That gives 34.29.
7. Now the semester exam we have just graded has a grade 28 out of 30 which is 93%. Then 0.93 will be multiplied by 11.43 multiplied by 10 (the semester exam weight). That gives 106.3.
8. Now let's add the results all together. That is 9.83 + 18.3 + 25.72 + 4.57 + 34.29 + 106.3 = 199
9. Finally, divide 199 by the course grade (240). That is 199 / 240 = 0.83.
10. That means the student grade percentage in English course is now 83% as shown above in the grading report.

Let's grade the second semester exam for English course. We need first to create the semester exam from the Admin side as below:



As class teacher, we will select GSemseter Two exam to grade as follows:



Semester Exam

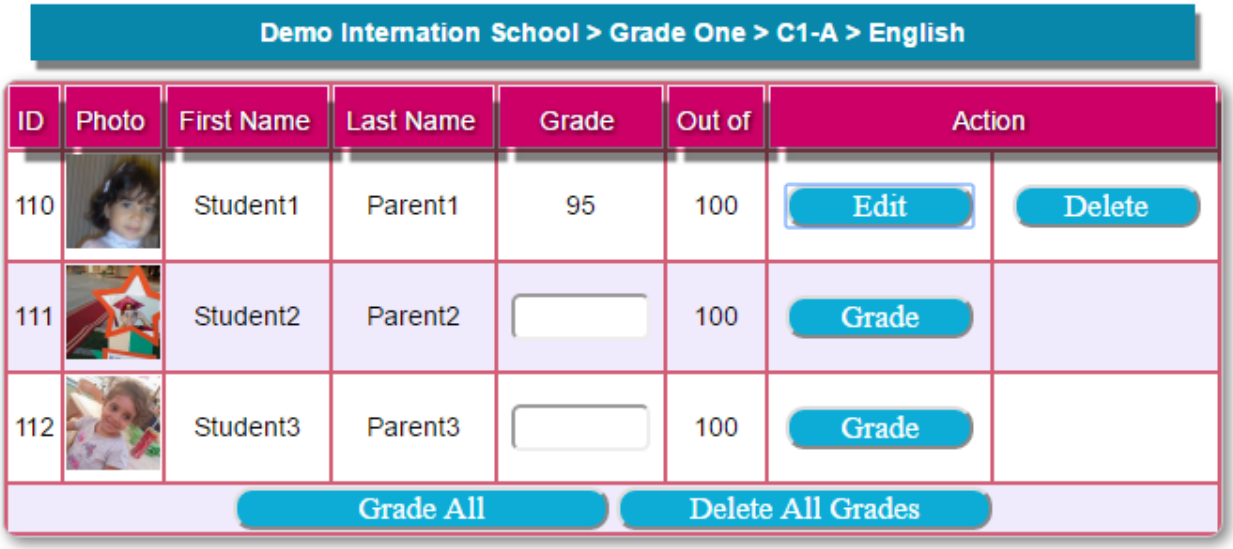
School	Grade	Class	Course	Exam	Action
Demo Internation School	Grade One	C1-A	English	GSemester Two	Grade Semester Exam
Demo Internation School	Grade One	C1-A	German	Select Exam	Grade Semester Exam
Demo Internation School	Grade One	C1-A	Math Group 1	Select Exam	Grade Semester Exam
Demo Internation School	Grade One	C1-B	Philosophy	Select Exam	Grade Semester Exam
Demo Internation School	Grade One	C1-B	Physics	Select Exam	Grade Semester Exam
Demo Internation School	Grade One	C1-B	English	Select Exam	Grade Semester Exam

Demo Internation School > Grade One > C1-A > English

ID	Photo	First Name	Last Name	Grade	Out of	Action
110		Student1	Parent1		100	Grade
111		Student2	Parent2		100	Grade
112		Student3	Parent3		100	Grade

Grade All | Delete All Grades

Let's grade Student1 95 out of 100 for the exam like below:



Demo Internation School > Grade One > C1-A > English

ID	Photo	First Name	Last Name	Grade	Out of	Action	
110		Student1	Parent1	95	100	Edit	Delete
111		Student2	Parent2		100	Grade	
112		Student3	Parent3		100	Grade	

Grade All | Delete All Grades

Now let's check the grading report after we have done these changes.

Demo Internation School > Grade One > C1-A > English

English Grading Report - Year 2016-2017

Course	GTerm 1		GSemester One Exam Grade		GSemester One		GTerm 2		GTerm 3		GSemester Two Exam Grade		GSemester Two		Final Year	
- 110 Student1 Parent1	74%	-	93%	-	83%	-	-	-	-	-	95%	A+	95%	A+	88%	-
Class Work 80% Home Work 86% Quizzes 75% Teacher Assignments 40% Attendance 75%																
+ 111 Student2 Parent2	75%	-	-	-	-	-	-	-	-	-	-	-	-	-	75%	-
+ 112 Student3 Parent3	100%	A+	-	-	-	-	-	-	-	-	-	-	-	-	100%	A+

Let's recalculate as follows:

1. If the English course grade is 240. This 240 will be divided by the sum of all categories weights that counts as well as the attendance weight. Now Exam Semester for GSemester Two will be counted since it has been graded. That means 240 will now have to be divided by (1+2+3+1+4+10+15). Note that the semester exam for GSemester Two has weight 15. So, 240 divided by 36. That gives 6.67.
2. In homework, since the category grade is 86%. Then 0.86 will be multiplied by 6.67 multiplied by 1 (the weight of the homework assignment category). That gives 5.74.
3. In Class Work, its grade is 80%. We will multiply 0.8 by 6.67 by 2 (the Class Work category weight). That is 10.67.
4. In Quizzes category, its grade is 75%. Then 0.75 will be multiplied by 6.67 by 3 (the weight of Quizzes category). That gives 15.
5. In Teacher Assignments, its grade is 40%. Then 40% will be multiplied by 6.67 by 1 (the weight of Teacher Assignment category). That will give 2.67.
6. In attendance, it's already 75%. Then 0.75 will be multiplied by 6.67 multiplied by 4 (the attendance weight). That gives 20.
7. The semester exam for GSemester One has a grade 93%. Then 0.93 will be multiplied by 6.67 multiplied by 10 (the semester exam weight). That gives 62.
8. Now the semester exam for GSemester Two we have just graded has a grade 95 out of 100 which is 95%. Then 0.95 will be multiplied by 6.67 multiplied by 15 (the semester exam weight). That gives 95.

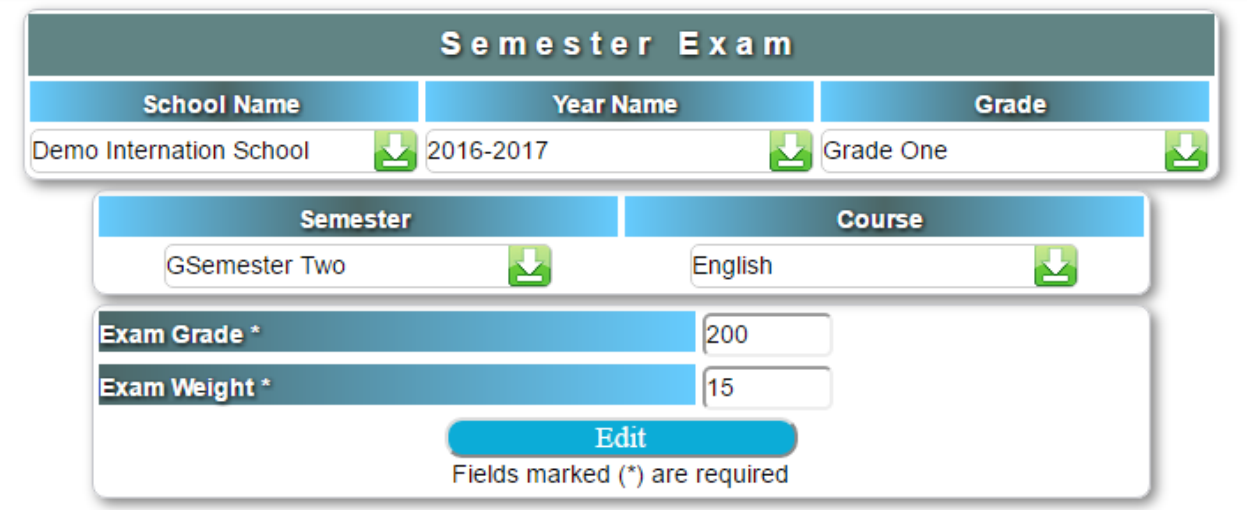
9. Now let's add the results all together. That is 5.74 + 10.67 + 15 + 2.67 + 20 + 62 + 95 = 211

10. Finally, divide 211 by the course grade (240). That is 211 / 240 = 0.88.
11. That means the student grade percentage in English course is now 88% as shown above in the grading report.

Important Rule:

If the Admin changed the Semester Exam Grade after class teacher has graded the students on that exam, the system would change the students grading accordingly and automatically based on the ratio of the new exam grade to the old exam grade. In our example, the Student1 graded 95 out of 100 in GSemester Two exam.

If the Admin changes GSemester Two exam grade from 100 to 200 as below:



Then the student will be automatically graded as 190 out of 200 instead of 95 out of 100:

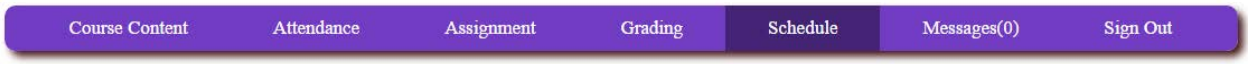
Demo Internation School > Grade One > C1-A > English

ID	Photo	First Name	Last Name	Grade	Out of	Action	
110		Student1	Parent1	190	200	Edit	Delete
111		Student2	Parent2		200	Grade	
112		Student3	Parent3		200	Grade	
				Grade All		Delete All Grades	

Schedule

The Schedule is also available for the class teachers.

As a Class Teacher, let's say Teacher1, to view your schedule go to Schedule in the main menu bar and click on Schedule as shown below:



The system will then display your schedule as below:

Teacher Schedule

	08:00 AM–08:45 AM	09:00 AM–09:45 AM	11:00 AM–11:45 AM	12:00 PM–12:45 PM
Monday	Demo Internation School Grade One C1-A English		Demo Internation School Grade One C1-A English	Demo Internation School Grade One C1-A Math Group 1
Tuesday	Demo Internation School Grade One C1-A Math Group 1	Demo Internation School Grade One C1-A English		Demo Internation School Grade One C1-A German
Wednesday	Demo Internation School Grade One C1-A German		Demo Internation School Grade One C1-A English	
Thursday	Demo Internation School Grade One C1-A English	Demo Internation School Grade One C1-A German	Demo Internation School Grade One C1-A Math Group 1	
Friday	Demo Internation School Grade One C1-B English	Demo Internation School Grade One C1-A English	Demo Internation School Grade One C1-A German	Demo Internation School Grade One C1-A Math Group 1

As you can notice, every cell in the schedule consists of School Name, Grade Name, Class Name and Course Name. This is because any class teacher can be assigned many schools and they also can be assigned many grades under the same school. They also can be assigned many classes under the same grade. For each class, they can teach many courses. Therefore, the schedule is showing all these details in each session in the day.

STUDENT PORTAL

Introduction

Student Portal provides students and parents with what they need to streamline the learning process.

Students can download eBooks files under whatever courses that have the eBooks uploaded. Students can review their lessons that are in progress or any lessons linked to any units under any course and they can download the files attached to these lessons.

Students can check the current assignments that need to be delivered as per the teacher's instructions and they can download any files attached to these assignments and they can sit for online quizzes which are graded automatically and instantaneously.

Students can view their attendance report with a breakdown per attendance status.

Students can retrieve reports about their courses and the teachers who are assigned to teach them in the classes.

Students can retrieve their detailed grading reports and report cards with a breakdown for the assignments categories grading, attendance grading as well as the semester exam grading.

Students can retrieve their schedules through the schedule system.

Students can communicate with each other and with their teachers through the messaging and collaboration services.

Students can retrieve and view the school calendar.

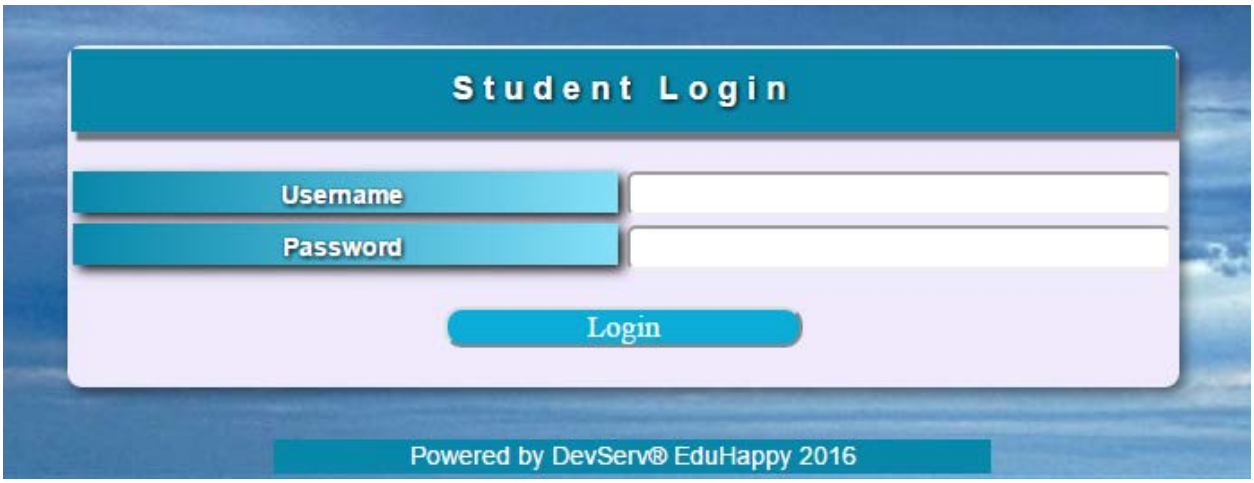
Students can retrieve and view the exam schedule.

Students can view their profiles and change their passwords.

Students Login

Students need to use their login information sent to them by the school administration to login to the Student Portal.

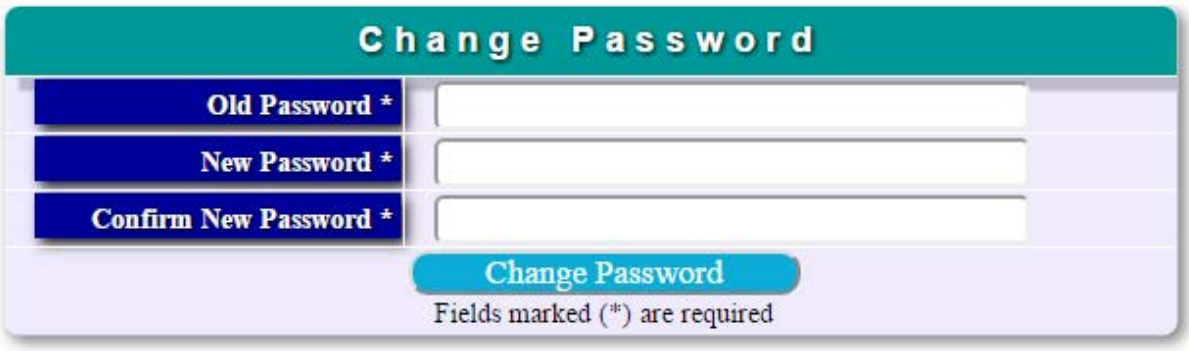
When the students try to login, they will be asked to enter the username and password in the login form below:



Students will need to use the login information sent to them by the Admin.

At the first login, if the login information is entered correctly, the system will ask the student to change her/his password.

Let's assume that you, as student, will login using the Student1 login information. At the first login, you will get the following form:



You will have to change password. Enter the old password and new password and confirm new password.

If you changed your password successfully, you will be logged into the system as follows:

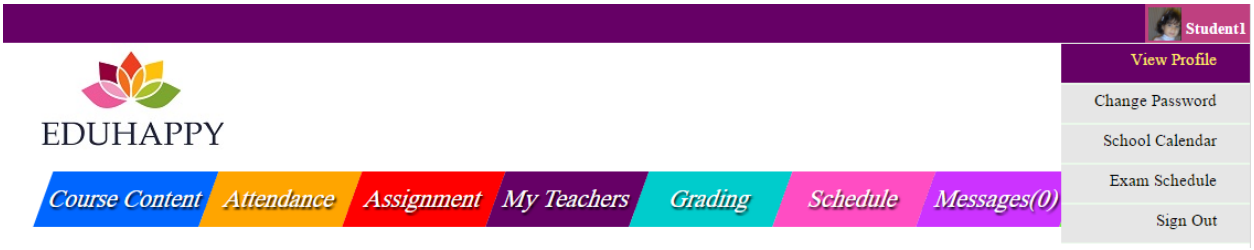
After the successful login, you will have all the features available and accessible through the mean menu bar as shown in the above screen.

Student Profile

Students can view their profile and change password through the menu in the upper right corner of any page.

Go to the upper menu on the right as follows:

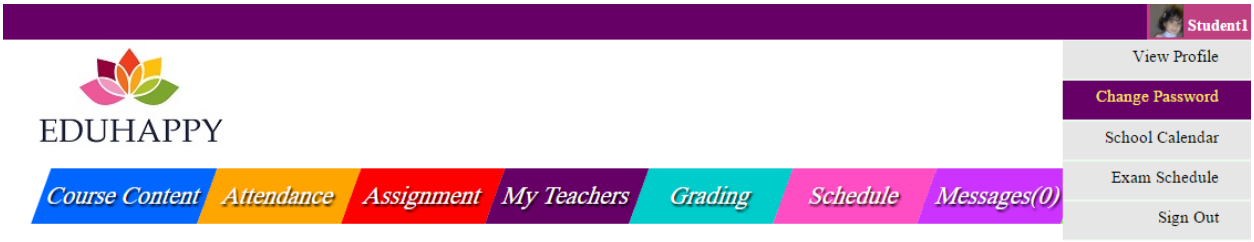
View profile



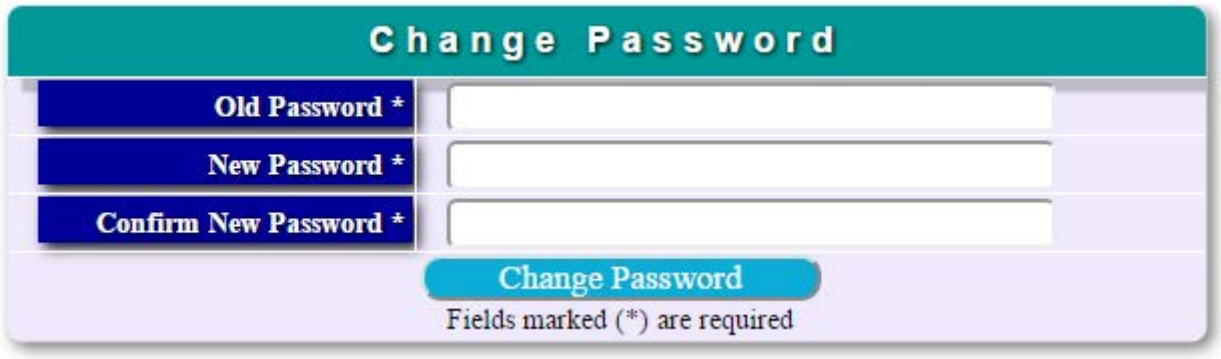
Click on View Profile to access your profile as below:

If you would like to change your password, click on Change Password as follows:

Chang password

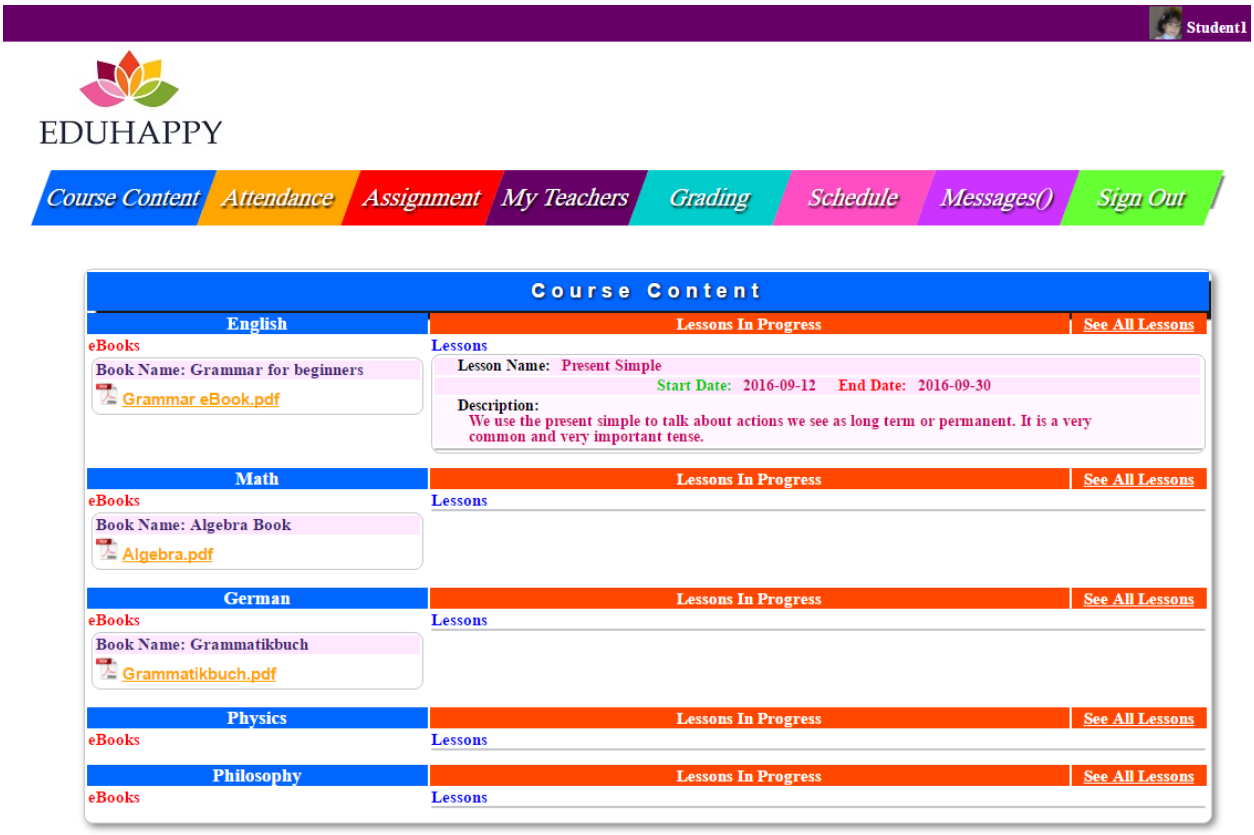


You will get the following form to change password:



Course Content

Student can access the course content through the main menu. Click on Course Content and you will get the following screen:



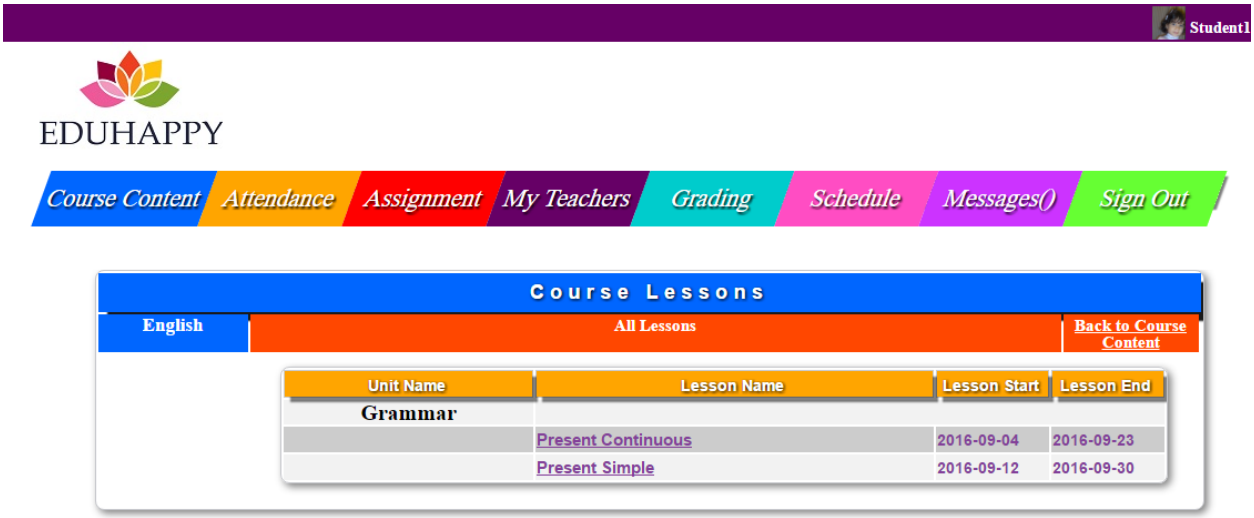
The course content page has all the courses related to the logged in student according to the student's Grade.

The course content page has two parts.

The left side of the page contains the eBooks per course. The eBook has the eBook name as well as the files attached to this eBook. A student can download any file attached to the eBook.

The right side of the page contains the Lesson in Progress which provides the student with an easy and fast access to the current lesson without requiring the student to search for the lesson that is currently in progress. Under Lesson in Progress, you can see all the lesson details such as the lesson name, the start and end dates, the lesson description as well as the files that might be attached to the lesson. You will also have a link to all lessons through "See All Lessons" link.

Click on "See All Lessons" link in order to retrieve all the available lessons under any of the listed courses. Let's click on the link under English course. You will get the following screen:



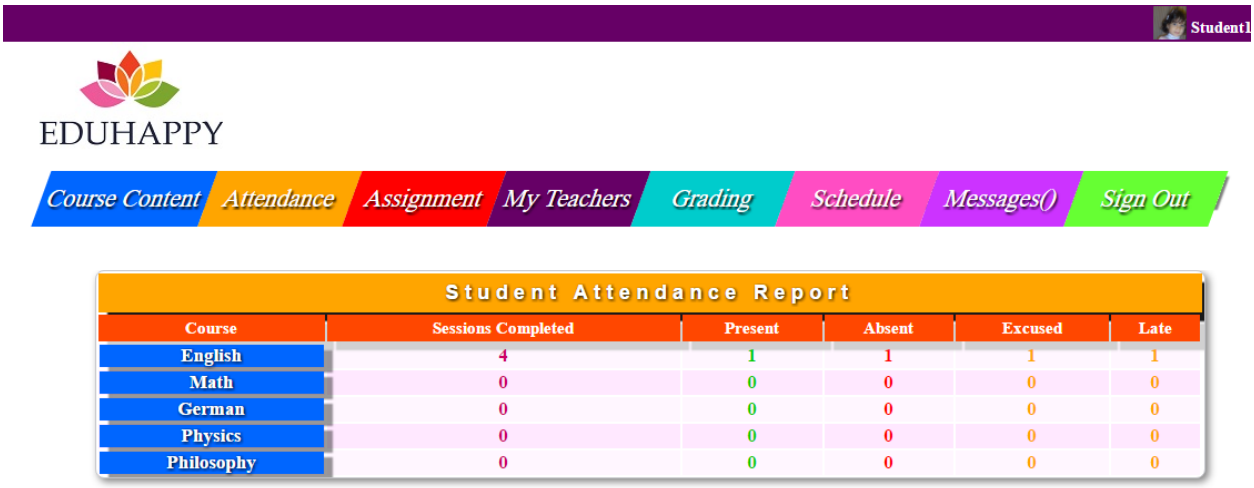
You will have all units created under English course and under these units you have all the related lessons listed. Click on any lesson to get the lesson details page as below:

You can notice that the files are classified as documents files, Power Point presentation files, Video files, images and archive.

Attendance

Student can retrieve attendance report with breakdown per attendance status per course.

To retrieve the attendance report, click on Attendance on the menu bar. You will get the following report page:



Student Attendance Report

Course	Sessions Completed	Present	Absent	Excused	Late
English	4	1	1	1	1
Math	0	0	0	0	0
German	0	0	0	0	0
Physics	0	0	0	0	0
Philosophy	0	0	0	0	0

The report will display the total number of completed sessions as well as the number of sessions in which your status was Present and another number that represents the total number of sessions in which your status was marked as Absent and another one for Excused and another one for Late. This is represented for each course as shown in the report.

Assignment

Current Assignments

In the Assignment page, the students will be able to retrieve all the "Current" assignments.

That means only the assignments that the teachers decided to appear in this page according the dates will be displayed here under Current Assignments. However, if the assignment date passed already, it will be archived for later retrieval through "Previous Assignments" link.

Go to Assignment in the main menu bar and click the link, you will get the following screen:

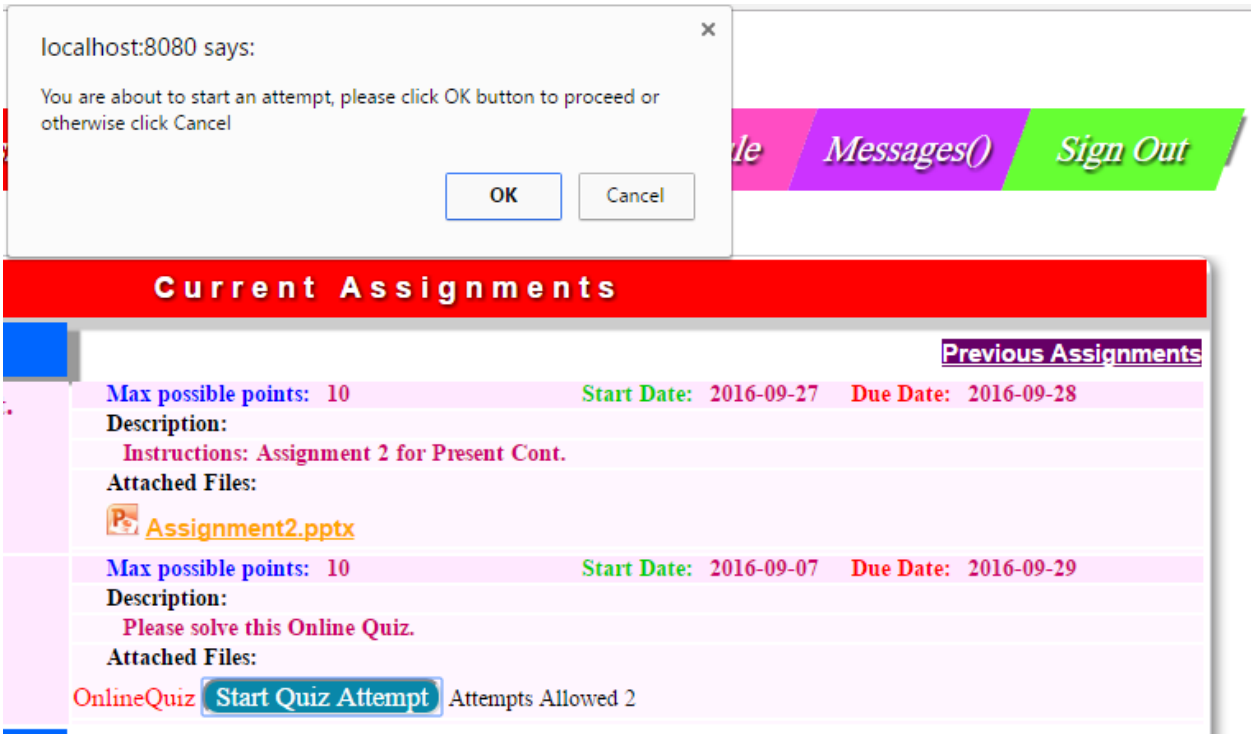
You will have all courses listed and under each course, you will find the assignments that have "Display Date" before today's date.

For each assignment, all the details are displayed such as the max possible points which are the assignment grade, the start and due dates and description. You will be able to download any files attached with the assignments under Attached Files.

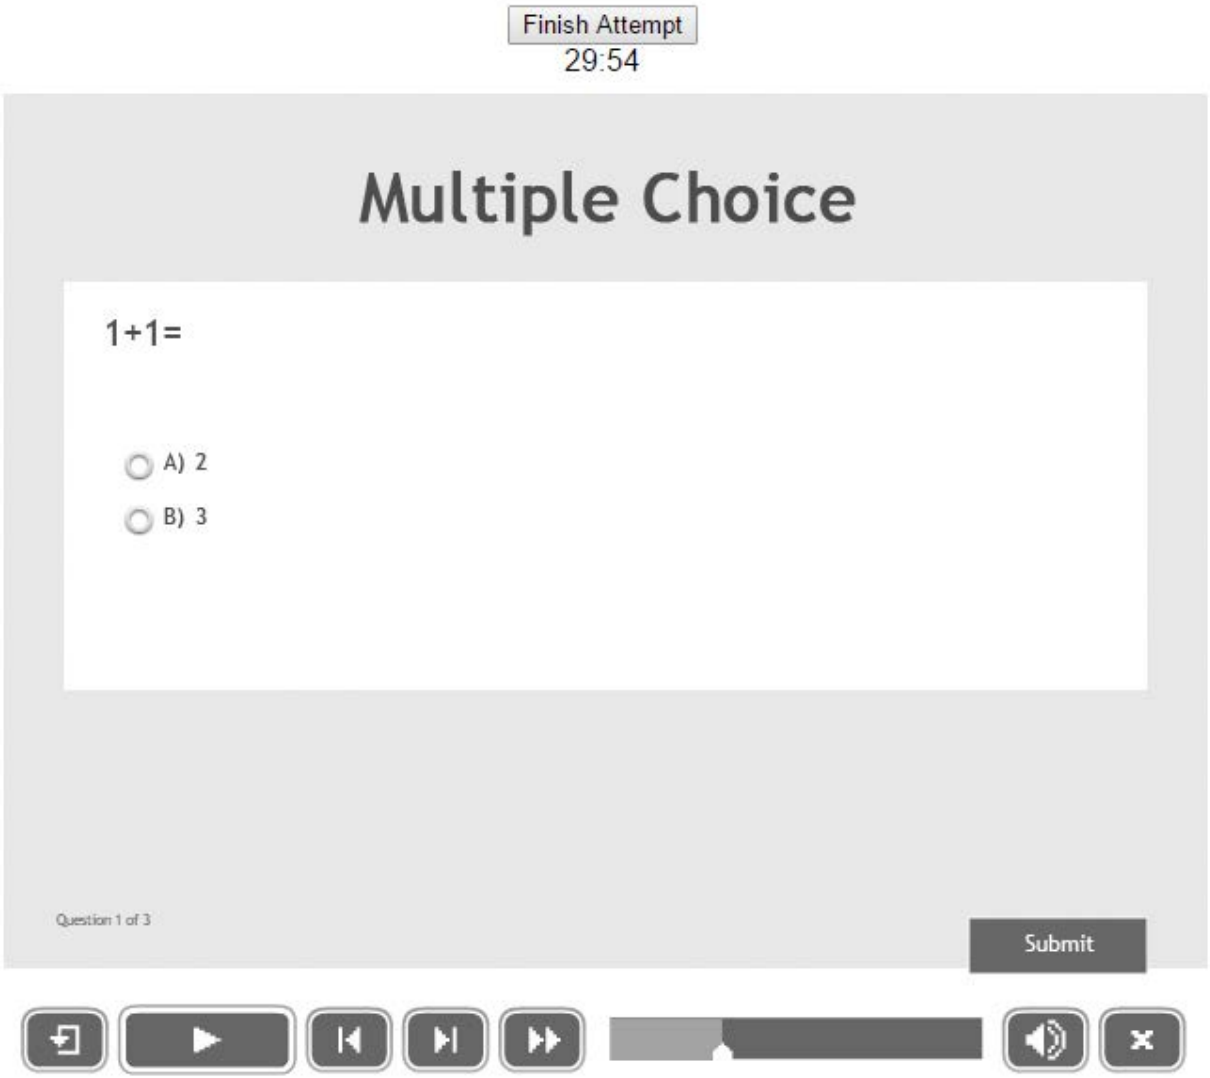
If the assignment is Online Quiz, then you will have a button called "Start Quiz Attempt". Next to that button, you will see the number of allowed attempts.

To start an attempt to sit for the online quiz, click on Start Quiz Attempt. The system will display a pop up window that contains the quiz and the timer will start to count the time if the quiz is a timed quiz otherwise there will be no timer.

Click on Start Quiz Attempt, the system will display a confirmation dialog as follows:

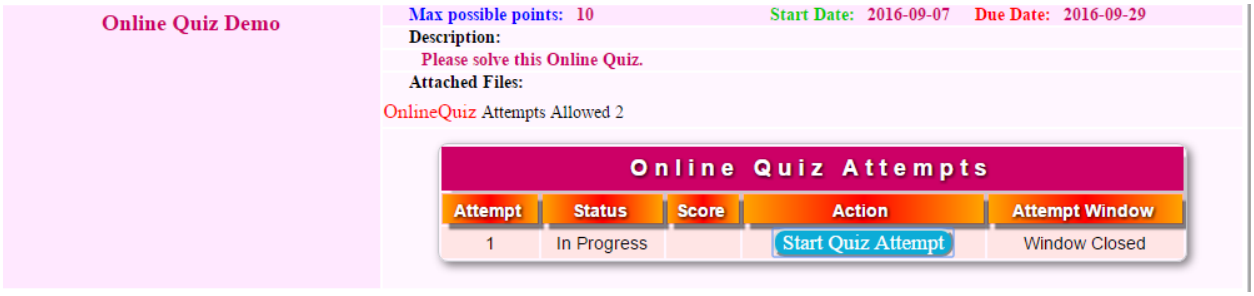


If you are sure you would like to start the attempt, click OK. The system will count one attempt once you click OK and will start that attempt and display the pop up window that contains that quiz as follows:



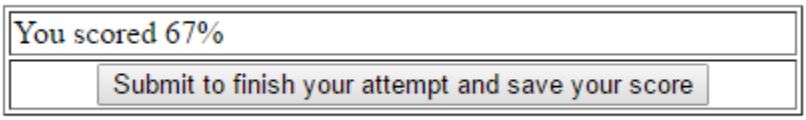
You need to solve the question and click Submit button to get the next one.

If you decided not to continue with the attempt, you can close it anytime. The system will mark the attempt as "In Progress" as follows:



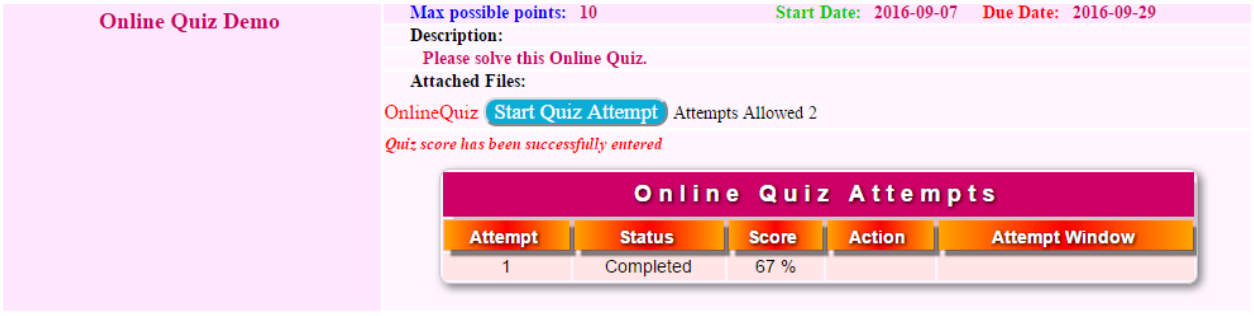
Next time you click on Start Quiz Attempt button, the system will open the quiz but the timer will not start from the beginning, instead, it will continue from where it ended the last time. For instance, if in the last time you ended the attempt with 9 minutes remaining, next time you start the attempt the time remaining will be 9 minutes.

In order to finish the attempt, you need to finish all questions and then click on Finish Attempt button to complete the quiz and finish the attempt. The system will automatically grade the quiz and display the score as follows:



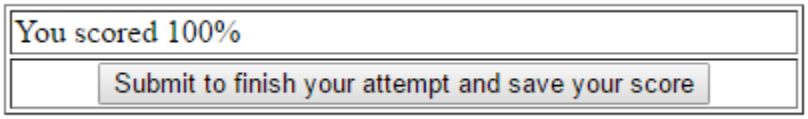
Click on "Submit to finish your attempt and save your score" button in order to save your score in the database.

The system will close the popup window and return to the assignment page and will mark the attempt as Completed and will save the score in the database only if the score is higher than any other previous attempts scores. If you have already scored higher in a previous attempt, the current score will not be saved. This is to guarantee you are getting the highest score in all the attempts. The system will reduce the chances remaining for you to re-attempt the quiz by one, for instance, if the allowed attempts are two and you finished one attempt, then only one chance will be left for you to take another attempt.

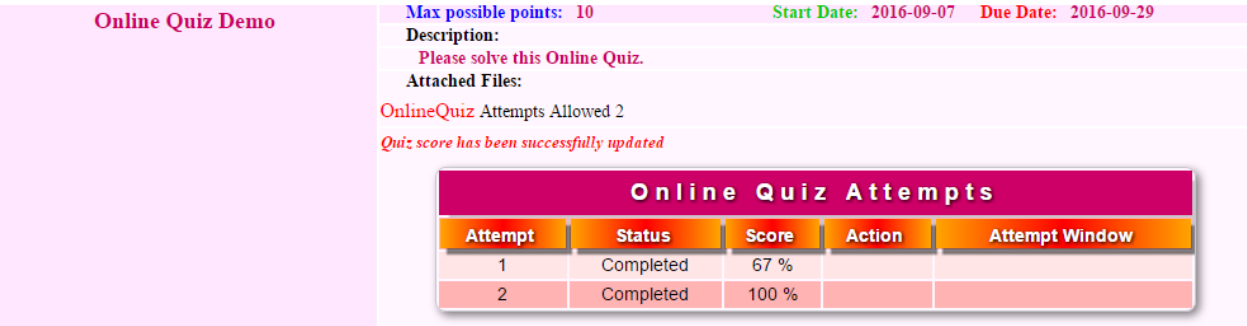


Click on Start Quiz Attempt to start the second attempt.

Let's say this time you achieved higher score as follows:

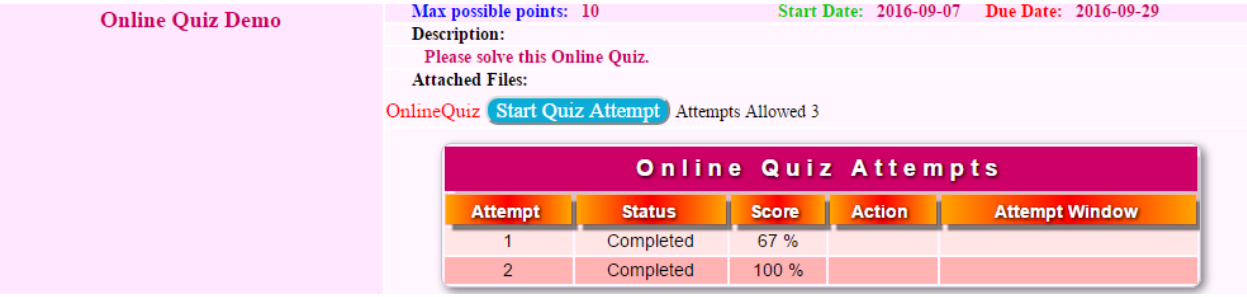


Then the system will save this score since it is higher than before as follows:

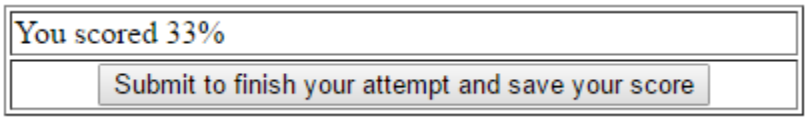


Since you have completed two attempts, no more chances are left for you to take any more attempts.

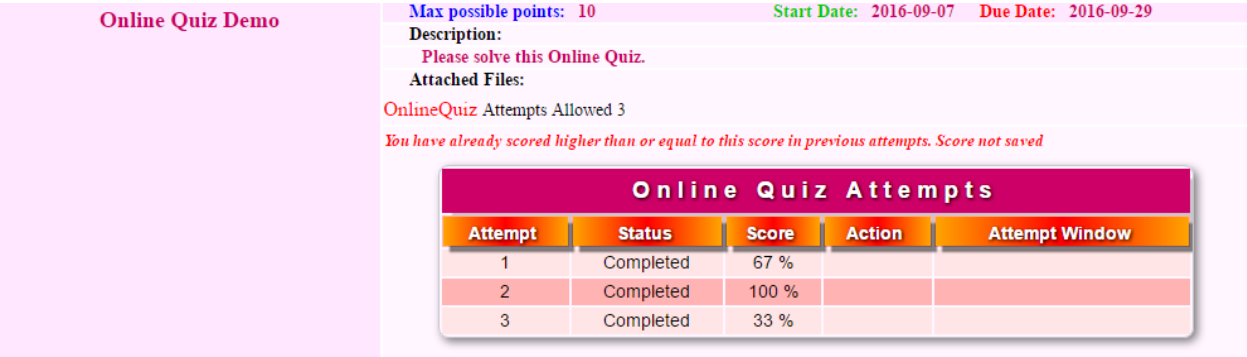
If the teacher updated the number of attempts to be three attempts instead of two, then will get one more attempt to take as follows:



Let's take this attempt but this time, we will score less than 100% as follows:



The system will not save this score and will display the following message:

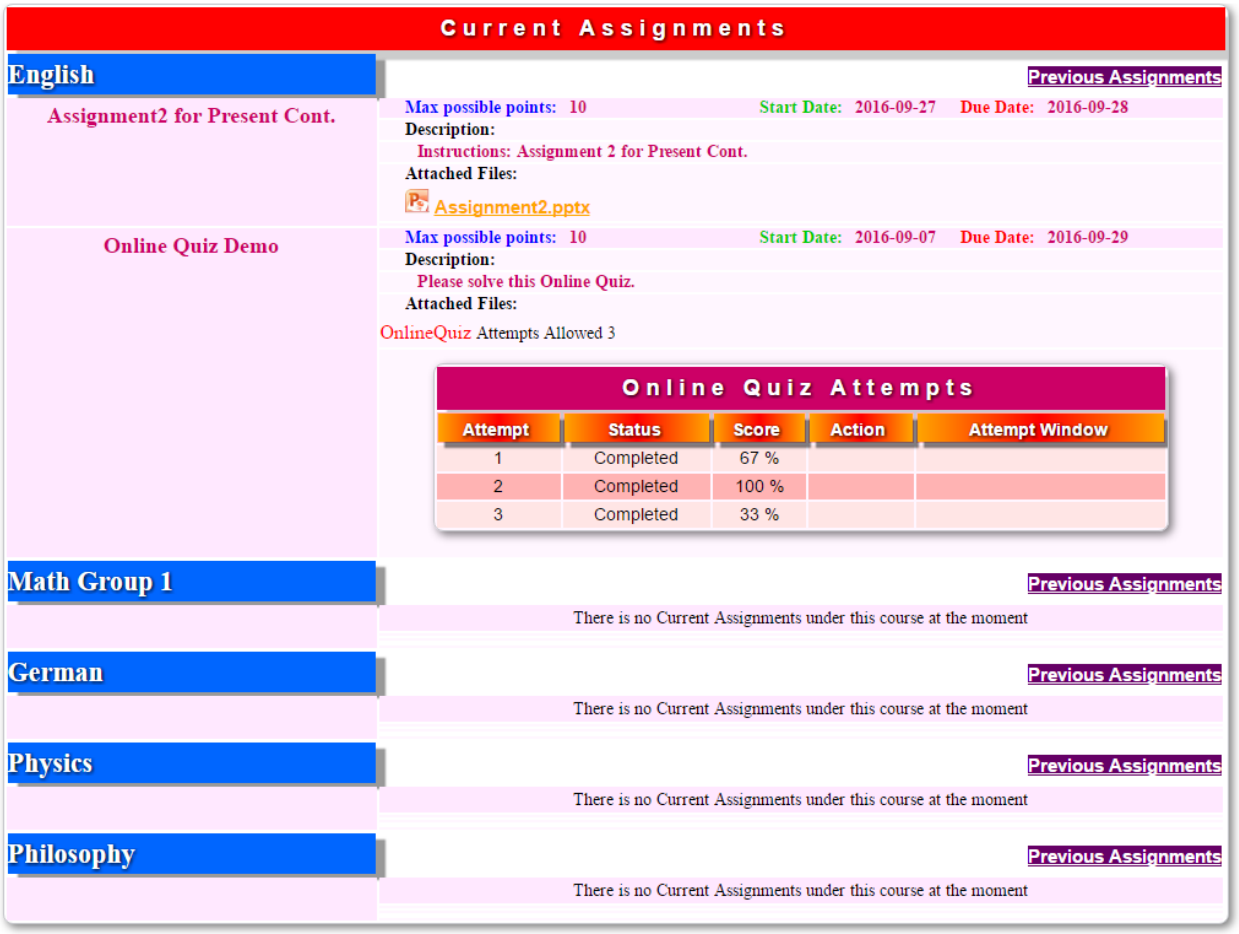


It states that "You have already scored higher than or equal to this score in previous attempts. Score not saved".

Previous Assignments

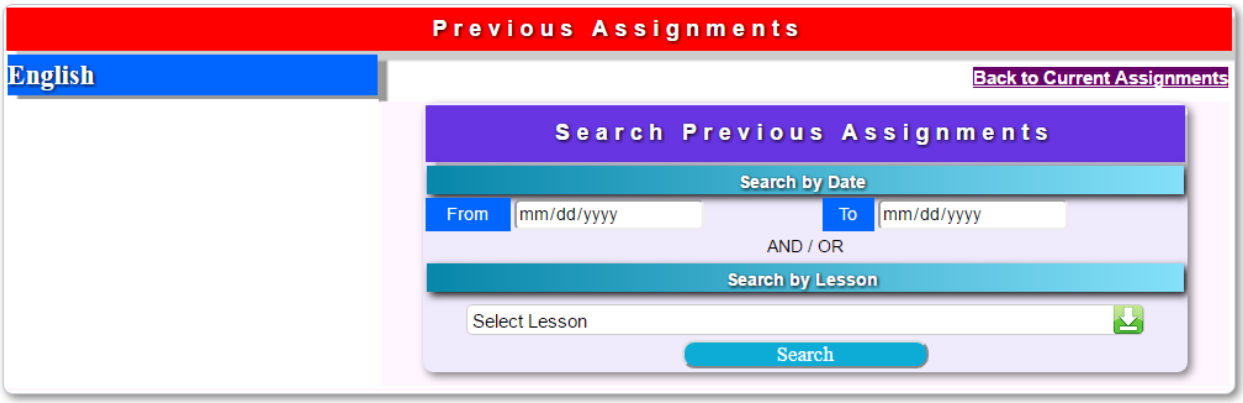
If the current assignment display date is after today's date then the assignment will be archived and you will not be able to see it under Current Assignments anymore.

In order to search for any previous assignment, click on Previous Assignments link next to the course for which you are searching the assignments.



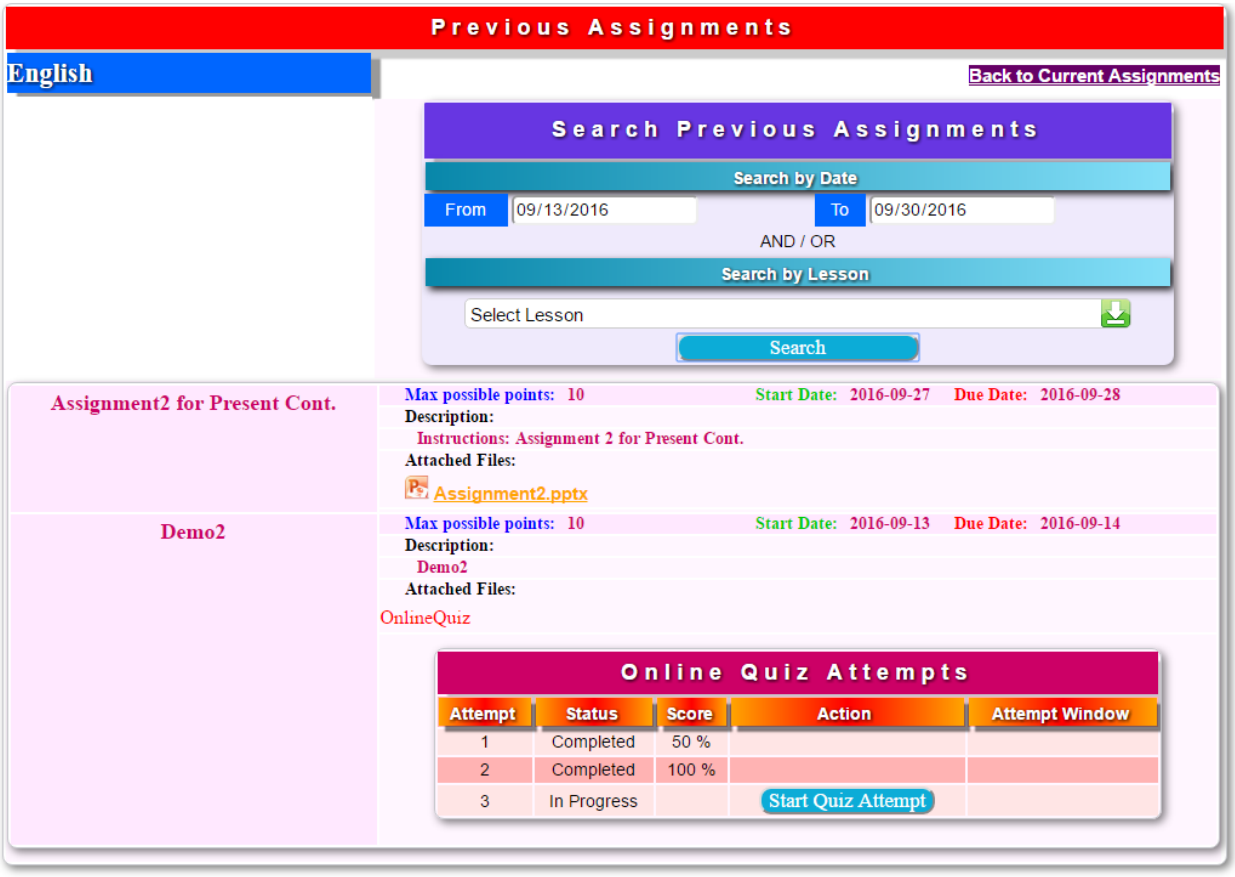
Click on Previous Assignments link next to the English course.

You will be directed to the following page with Previous Assignments search form:



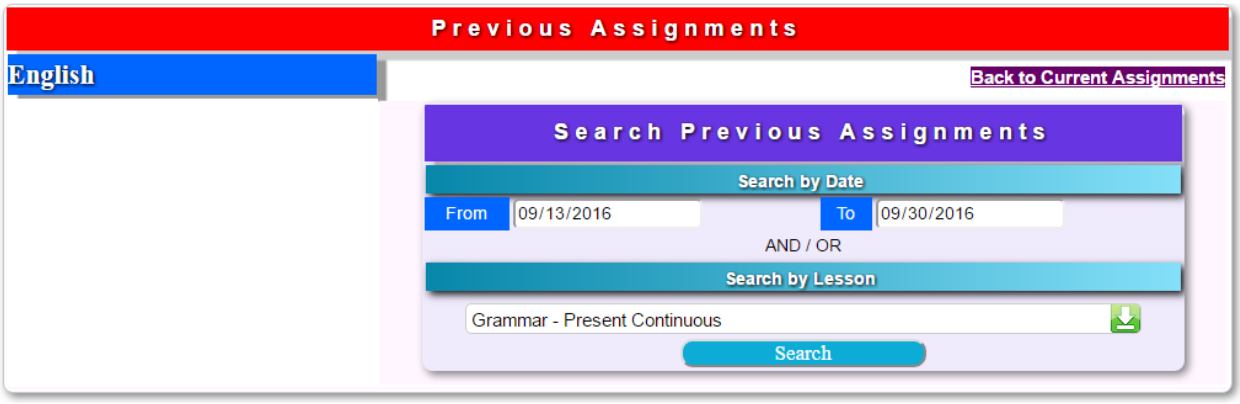
To search for any assignments you need to set the search criteria. Set the dates and / or select the lesson name from the lessons drop down list then click Search button. The system will retrieve the assignments that meet the criteria you have set.

Set the dates like below and search for the assignments. You will get the following results:

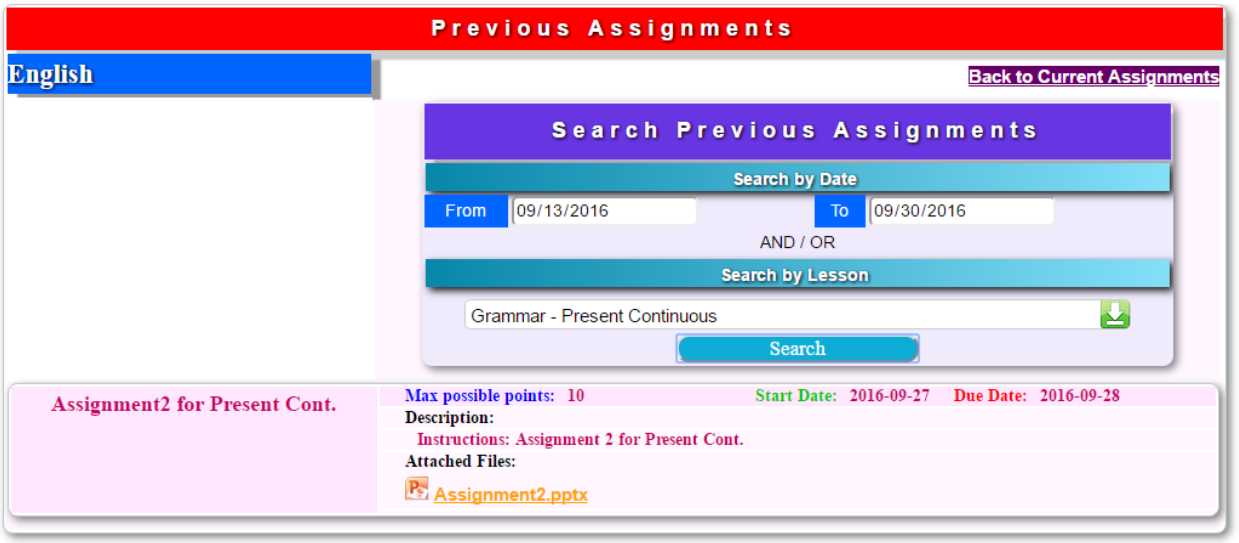


Please note that the dates are searched against the due date of the assignments.

Now combine the lesson with the dates. Leave the dates in the previous scenario as is and select a lesson. Let's say "Present Continuous" as follows:



Then click on Search button and you will get the following results:

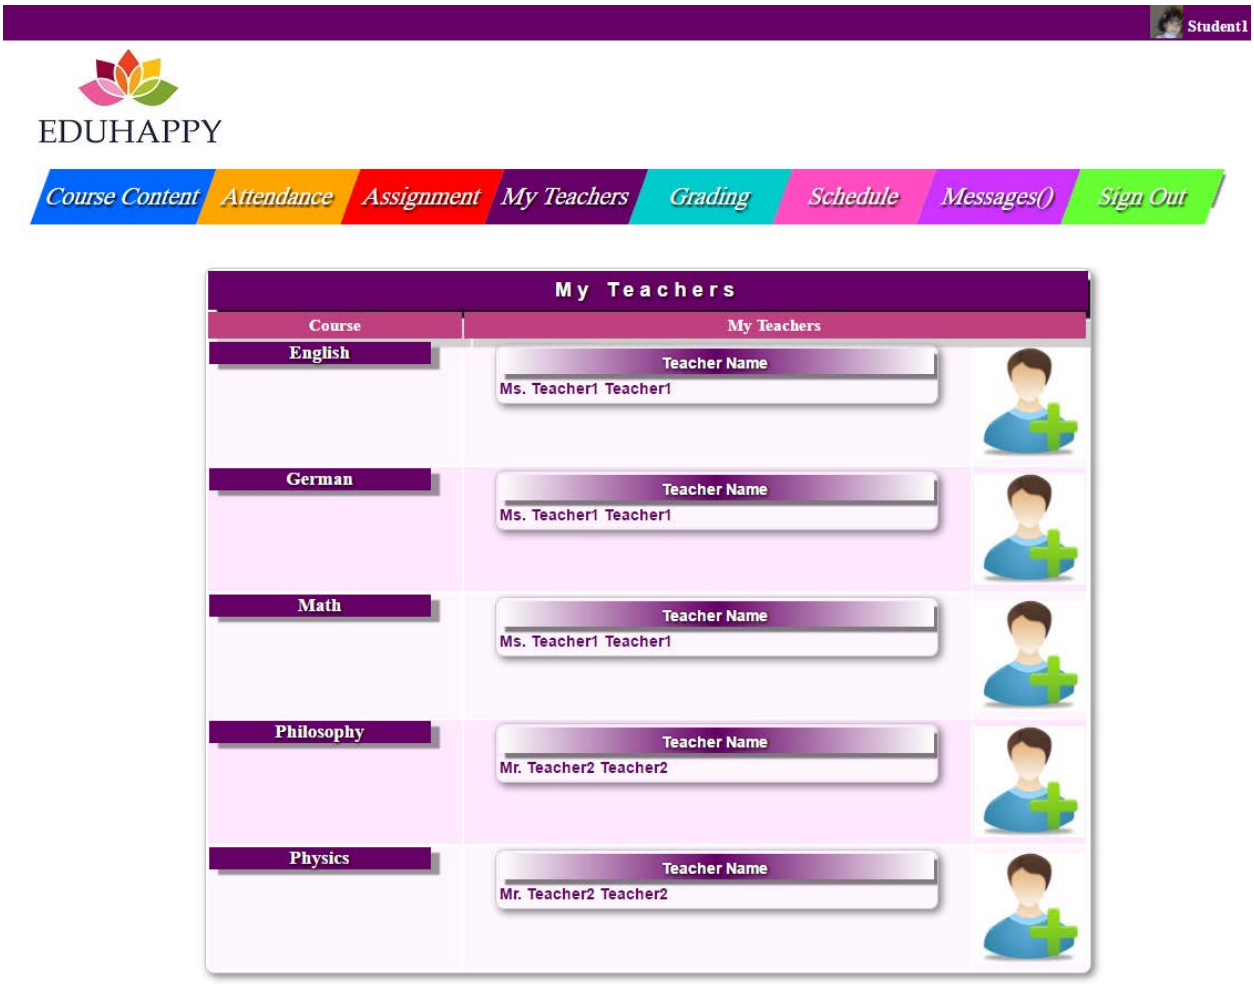


My Teachers

Students will be able to get a list of all their teachers with photos. The teachers are linked to the courses the student have as per her/his grade.

As Student1, go to My Teachers in the main menu bar and click the link.

The system will display the following list:



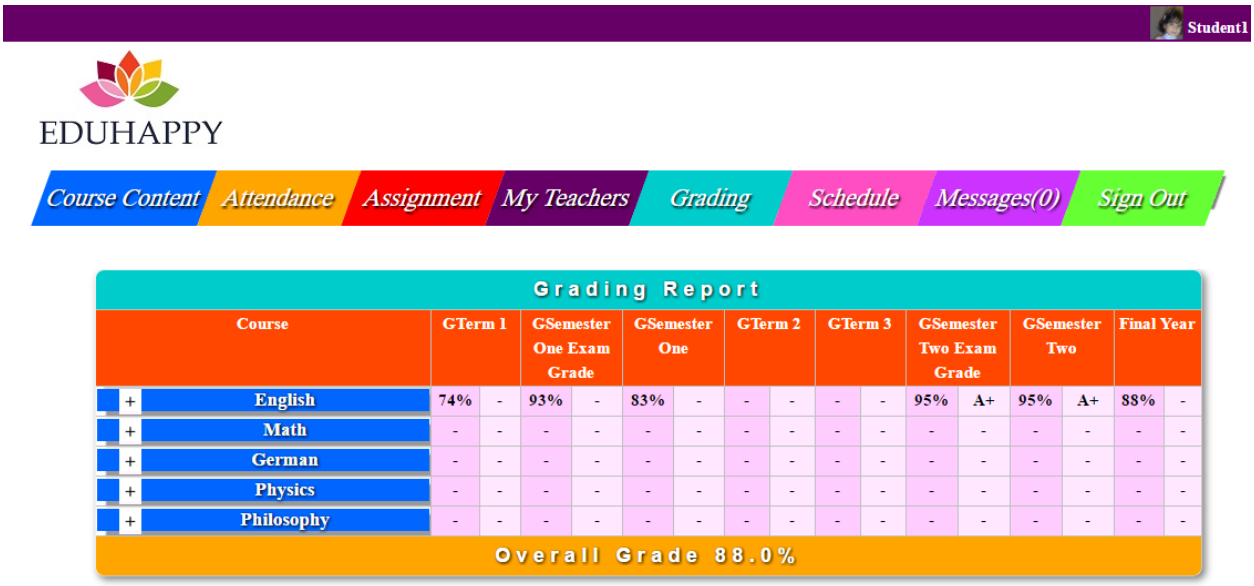
Each course has its own teacher. The name and the photo of the teacher are displayed next to each course.

Grading

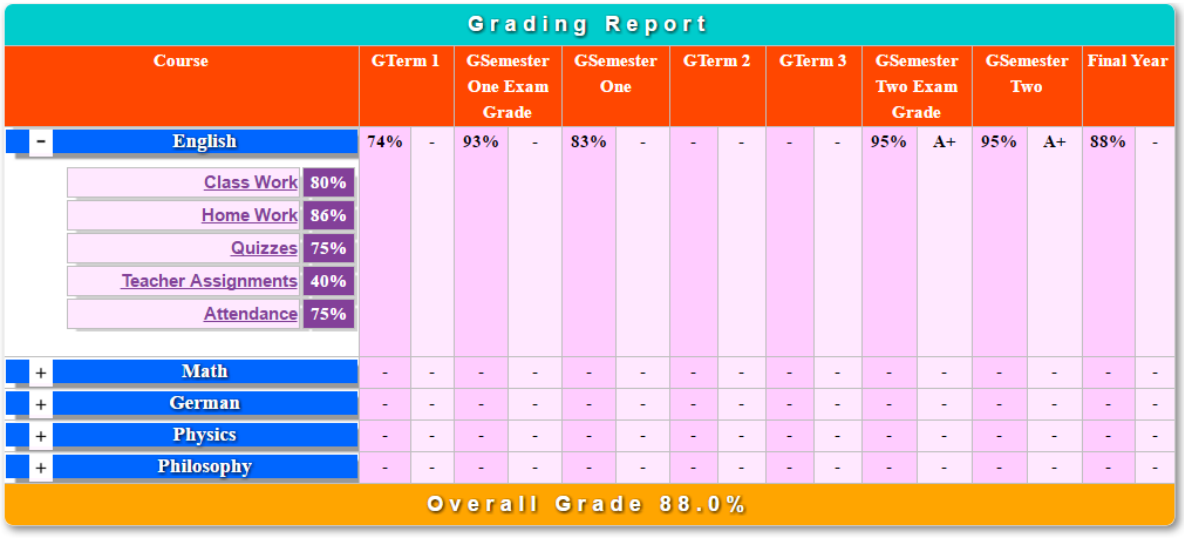
Students will be able to get the full report card with detailed course grading and breakdown for categories grading as well as the attendance grading. They will also be able to get a full report about the grading per terms, per semester, semester exam grade, and final grade. At the end of the report, they will get the overall grading for the whole Grade. They can check any assignment grading or any session attendance status and grading.

Grading Report

Go to Grading in the main menu bar and click the Grading link. You will get the following report:



If you click the plus sign button you will get the breakdown for the categories and attendance grading like below:



If you click on any category link, you will get breakdown for all the assignments under this category with detailed grading and grading percentage as below:

Grading Report

Course	GTerm 1		GSemester One Exam Grade		GSemester One		GTerm 2		GTerm 3		GSemester Two Exam Grade		GSemester Two		Final Year	
- English	74%	-	93%	-	83%	-	-	-	-	-	95%	A+	95%	A+	88%	-

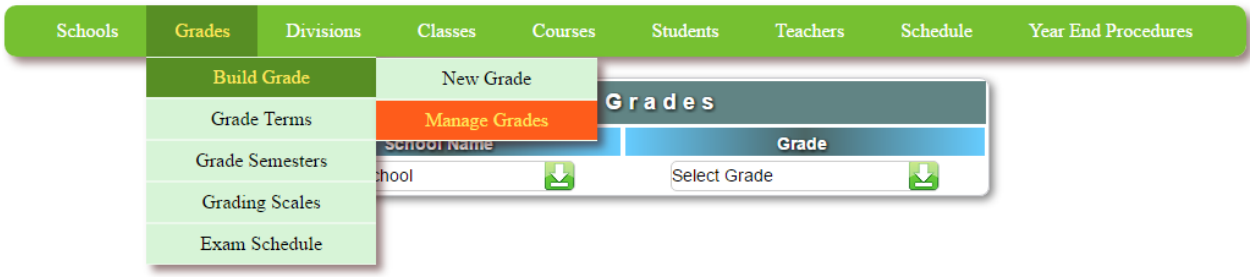
134	2016-09-13	09:00:00	09:45:00	Late	7	10	70%

Overall Grade

The overall grade is calculated based on the accumulation of the courses grades with each course's impact relative to the Grade Max Possible Points set earlier by the school administration.

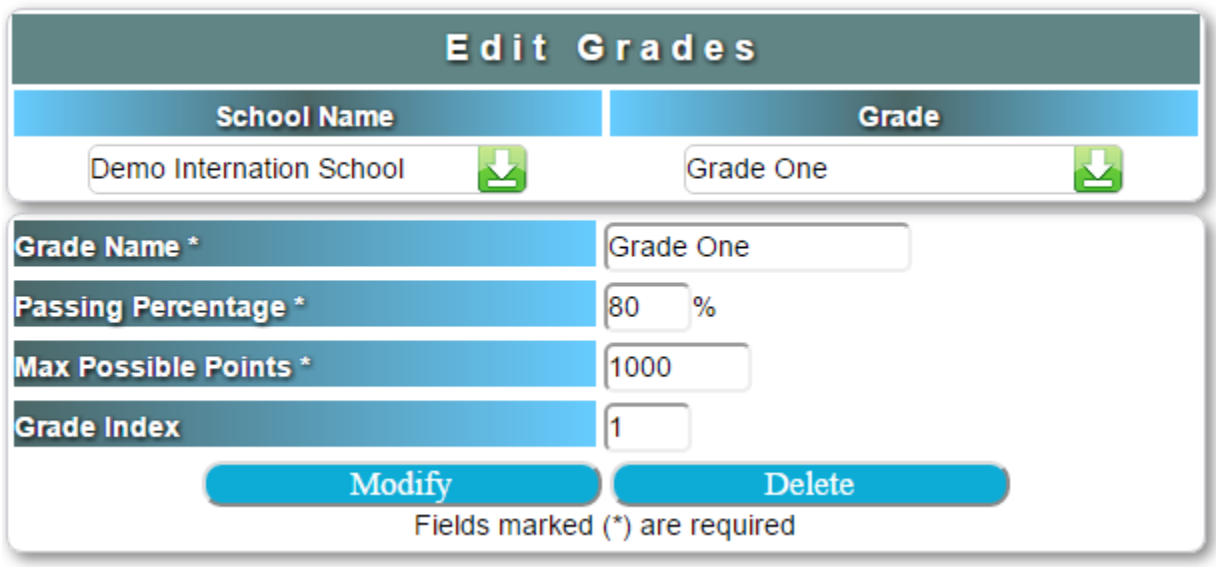
To elaborate more on this, we are showing below the screen that will remind you with the grade max possible points set of Grade One:

As Admin, go to Grades > Build Grade > Manage Grades:



Select School and Grade in the form below:

If you select Grade One you will get the following form:



Notice the field "Max Possible Points" which is 1000 in our case.

Recall the Grading report for Student1 again:

GRADING REPORT FOR THE YEAR 2016-2017

Course	GTerm 1		GSemester One Exam Grade		GSemester One		GTerm 2		GTerm 3		GSemester Two Exam Grade		GSemester Two		Final Year	
+ English	74%	-	93%	-	83%	-	-	-	-	-	95%	A+	95%	A+	88%	-
+ Math	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-
+ German	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-
+ Physics	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-
+ Philosophy	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-

Overall Grade 88%

You can see that the overall grade is 88%. This is because we have only one graded course which the English course and this course grade is 88% therefore there are no other courses and hence the overall grade, in this case, is the same and the English course.

Let's put some grades in Math course for Student1 in order to see the new impact of Math course grade on the overall grade.

We have done some grading for Student1 for Math course and the result was as below:

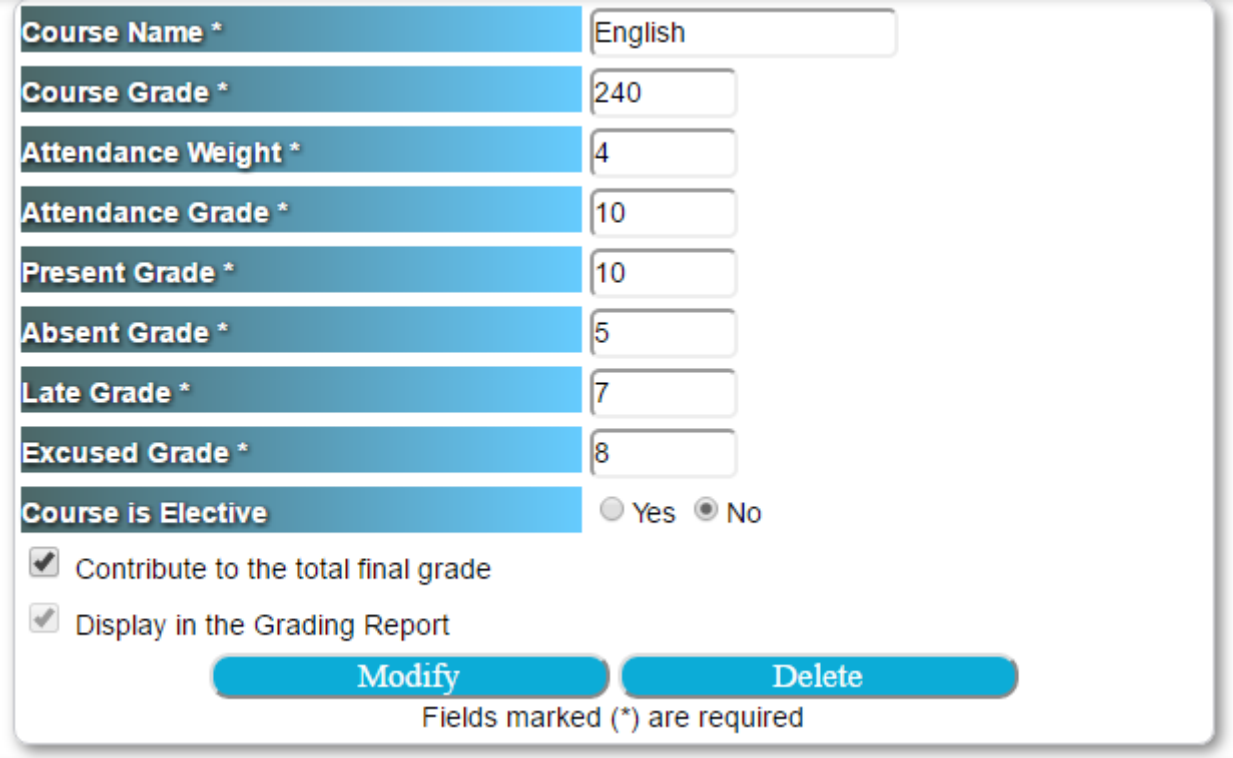
GRADING REPORT FOR THE YEAR 2016-2017

Course	GTerm 1		GSemester One Exam Grade		GSemester One		GTerm 2		GTerm 3		GSemester Two Exam Grade		GSemester Two		Final Year	
+ English	74%	-	93%	-	83%	-	-	-	-	-	95%	A+	95%	A+	88%	-
+ Math	83%	-	-	-	-	-	-	-	-	-	-	-	-	-	83%	-
+ German	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-
+ Physics	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-
+ Philosophy	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-

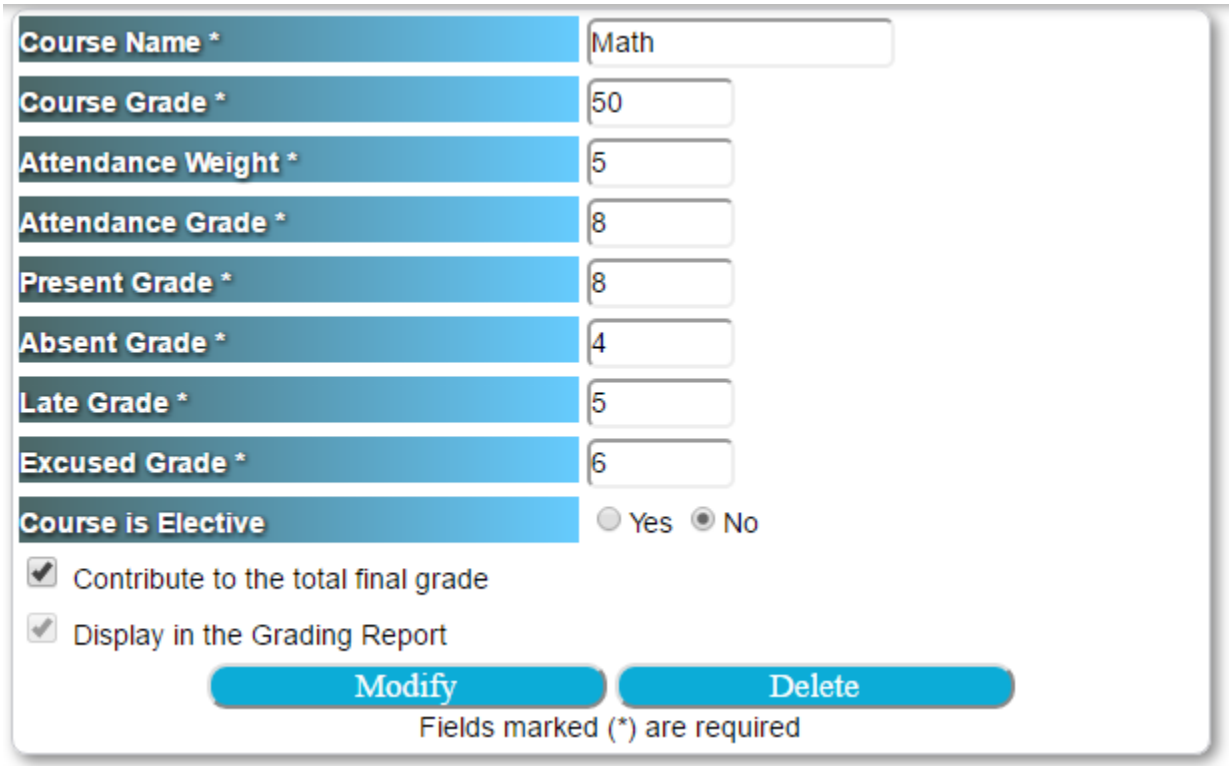
Overall Grade 87%

The Math course is now 83%.

Now, since we have two graded courses, English and Math, the overall grade changed from 88% to 87%. To understand how this is calculated, we will have to remind you that English course Grade is 240 as below:



While the Math course Grade is 50 as below:



The system then calculates the overall grade as below:

English Points = 240 * 88% = 240*0.88 = 211.2

Math Points = 50 * 83% = 41.5

Sum of both courses points = 211.2 + 41.5 = 252.7

Divide this by the sum of English Course Grade and Math Course Grade. That is 252.7 / (240+50) = 252.7 / 290 = 87 %. Hence the Overall Grade for Student1 in Grade One is 87% as shown previously. So, if you want to calculate the Overall Grade in terms of points instead of a percentage, then multiply 87% by the Grade Max Points which is 1000 in our case. That means Student1 Overall Grade is 870 points out of 1000.

Let's add another some grading to another course for more elaboration:

In German Course, we have added some grades to the student and the result was as below:

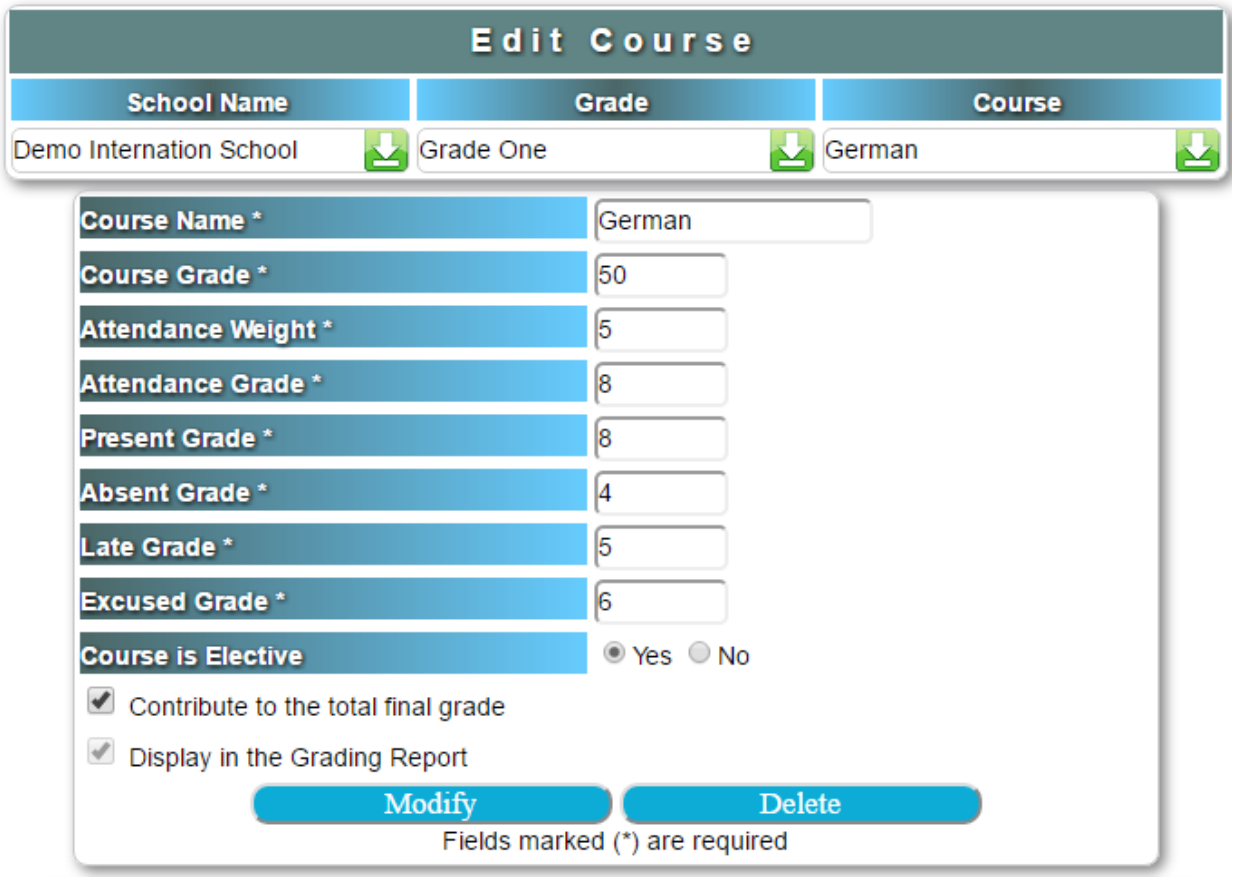
GRADING REPORT FOR THE YEAR 2016-2017

Course	GTerm 1		GSemester One Exam Grade		GSemester One		GTerm 2		GTerm 3		GSemester Two Exam Grade		GSemester Two		Final Year	
+ English	74%	-	93%	-	83%	-	-	-	-	-	95%	A+	95%	A+	88%	-
+ Math	83%	-	-	-	-	-	-	-	-	-	-	-	-	-	83%	-
+ German	72%	-	-	-	-	-	-	-	-	-	-	-	-	-	72%	-
+ Physics	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-
+ Philosophy	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-

Overall Grade 85%

German grade is now 72% and the overall grade became 85% as shown in the bottom of the grading report above.

Since German Course Grade is 50 as below:



Then the system will recalculate the overall grade as below:

English: 211.2

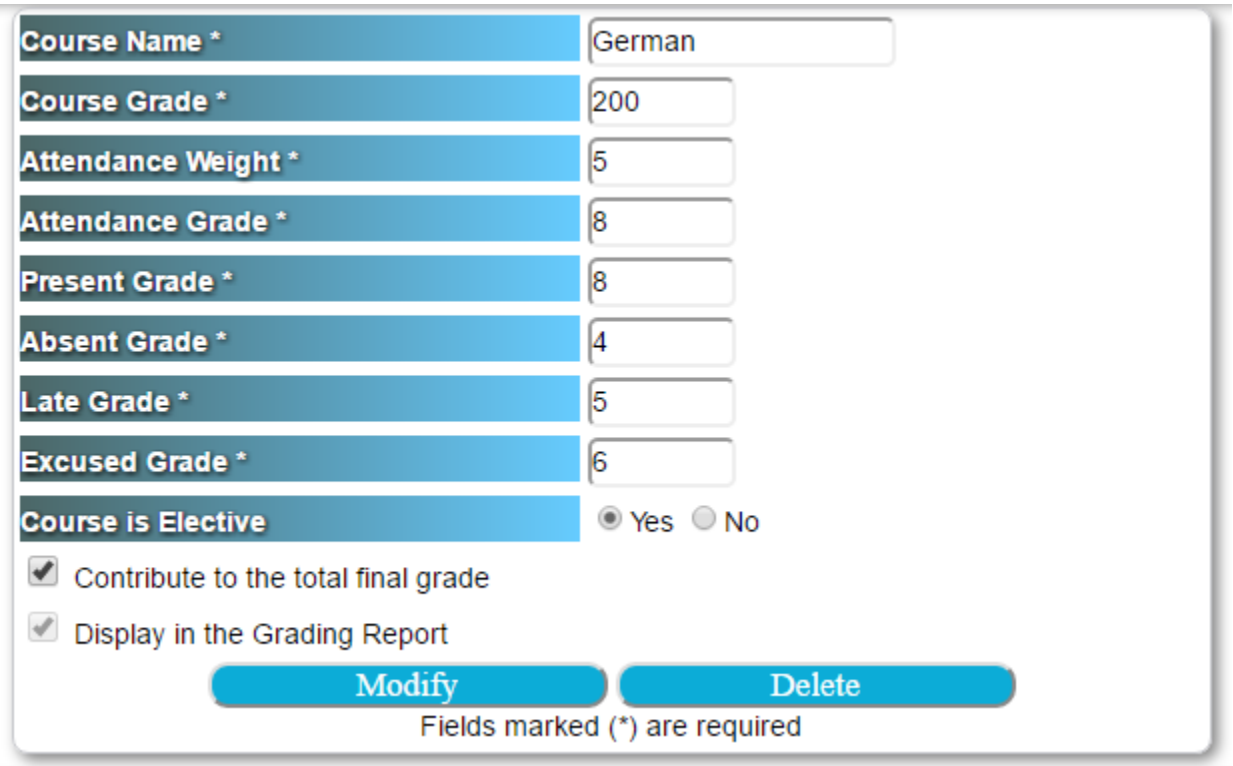
Math: 41.5

German: 50*72% = 50*0.72 = 36

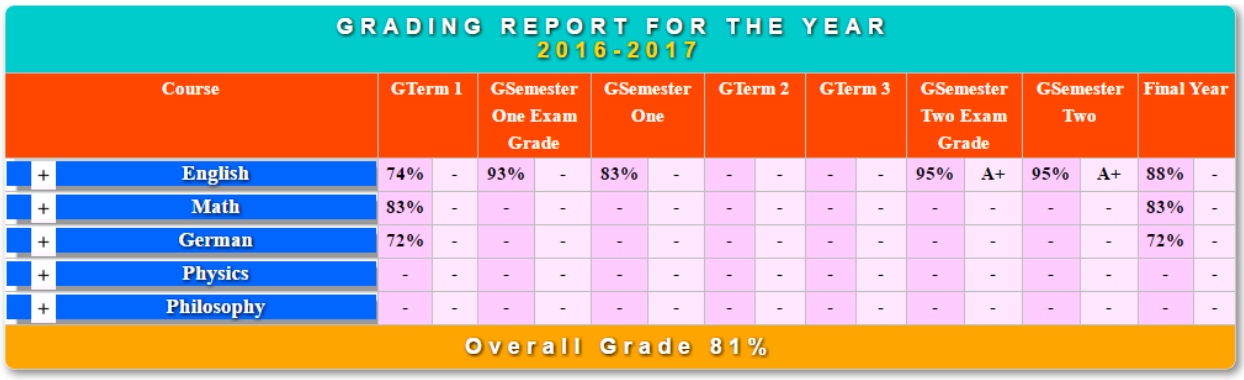
Total courses grade points = 211.2 + 41.5 + 36 = 288.7

Overall Grade percentage = (288.7 / (240+50+50) = 85% or 850 out of 1000.

Now, if we change, for example, German Course Grade from 50 to 200 as below:



And then check the grading report after this change:



GRADING REPORT FOR THE YEAR 2016-2017

Course	GTerm 1		GSemester One Exam Grade		GSemester One		GTerm 2		GTerm 3		GSemester Two Exam Grade		GSemester Two		Final Year	
+ English	74%	-	93%	-	83%	-	-	-	-	-	95%	A+	95%	A+	88%	-
+ Math	83%	-	-	-	-	-	-	-	-	-	-	-	-	-	83%	-
+ German	72%	-	-	-	-	-	-	-	-	-	-	-	-	-	72%	-
+ Physics	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-
+ Philosophy	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-

Overall Grade 81%

Although the German grade is still 72% unchanged, the Overall Grade has changed 85% to 81%.

That's because the impact of the German Course has now changed after we have changed its Course Grade field from 50 to 200 points. The system has recalculated the Overall Grade as follows:

English: 211.2

Math: 41.5

German: 200 (instead of 50)*72% = 200*0.72 = 144

Total courses grade points = 211.2 + 41.5 + 144 = 396.7

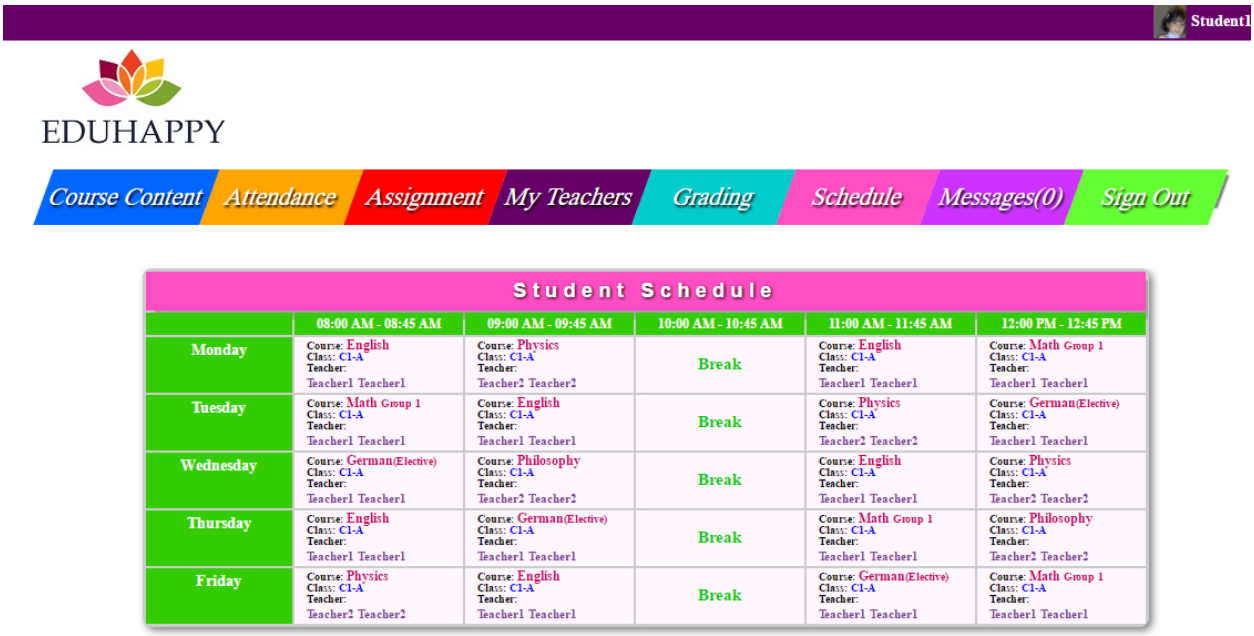
Therefore, Overall Grade is now:

Overall Grade percentage = (396.7/ (240+50+200) = 81% or 810 out of 1000.

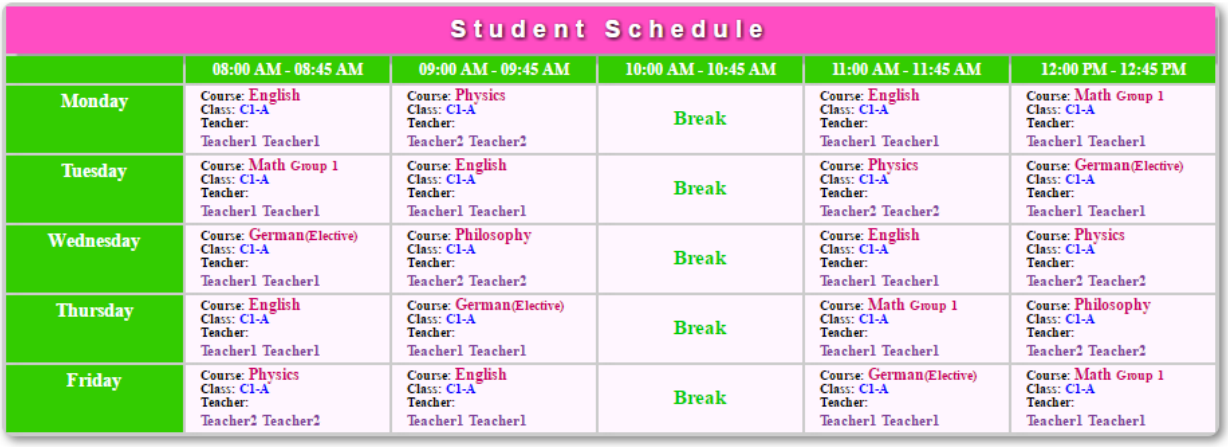
Schedule

Students will be able to get their schedule displayed in the schedule page.

Go to Schedule in the main menu bar and click on the Schedule link. The system will display the schedule related to the student as follows:



Note that this schedule is not only related to the student class but also it gets information from other schedule classes where student has a scheduled elective courses or course group that she/he might not attend in her/his own class.



For example, if we changed the German (Elective) scheduled at the first session on Wednesday shown in the schedule above to be taken in class C1-B instead of C1-A then the following schedule will be displayed to the student Student1 whom class is C1-A

Student Schedule					
	08:00 AM - 08:45 AM	09:00 AM - 09:45 AM	10:00 AM - 10:45 AM	11:00 AM - 11:45 AM	12:00 PM - 12:45 PM
Monday	Course: English Class: C1-A Teacher: Teacher1 Teacher1	Course: Physics Class: C1-A Teacher: Teacher2 Teacher2	Break	Course: English Class: C1-A Teacher: Teacher1 Teacher1	Course: Math Group 1 Class: C1-A Teacher: Teacher1 Teacher1
Tuesday	Course: Math Group 1 Class: C1-A Teacher: Teacher1 Teacher1	Course: English Class: C1-A Teacher: Teacher1 Teacher1	Break	Course: Physics Class: C1-A Teacher: Teacher2 Teacher2	Course: German(Elective) Class: C1-A Teacher: Teacher1 Teacher1
Wednesday	Course: German(Elective) Class: C1-B Teacher: Teacher2 Teacher2	Course: Philosophy Class: C1-A Teacher: Teacher2 Teacher2	Break	Course: English Class: C1-A Teacher: Teacher1 Teacher1	Course: Physics Class: C1-A Teacher: Teacher2 Teacher2
Thursday	Course: English Class: C1-A Teacher: Teacher1 Teacher1	Course: German(Elective) Class: C1-A Teacher: Teacher1 Teacher1	Break	Course: Math Group 1 Class: C1-A Teacher: Teacher1 Teacher1	Course: Philosophy Class: C1-A Teacher: Teacher2 Teacher2
Friday	Course: Physics Class: C1-A Teacher: Teacher2 Teacher2	Course: English Class: C1-A Teacher: Teacher1 Teacher1	Break	Course: German(Elective) Class: C1-A Teacher: Teacher1 Teacher1	Course: Math Group 1 Class: C1-A Teacher: Teacher1 Teacher1

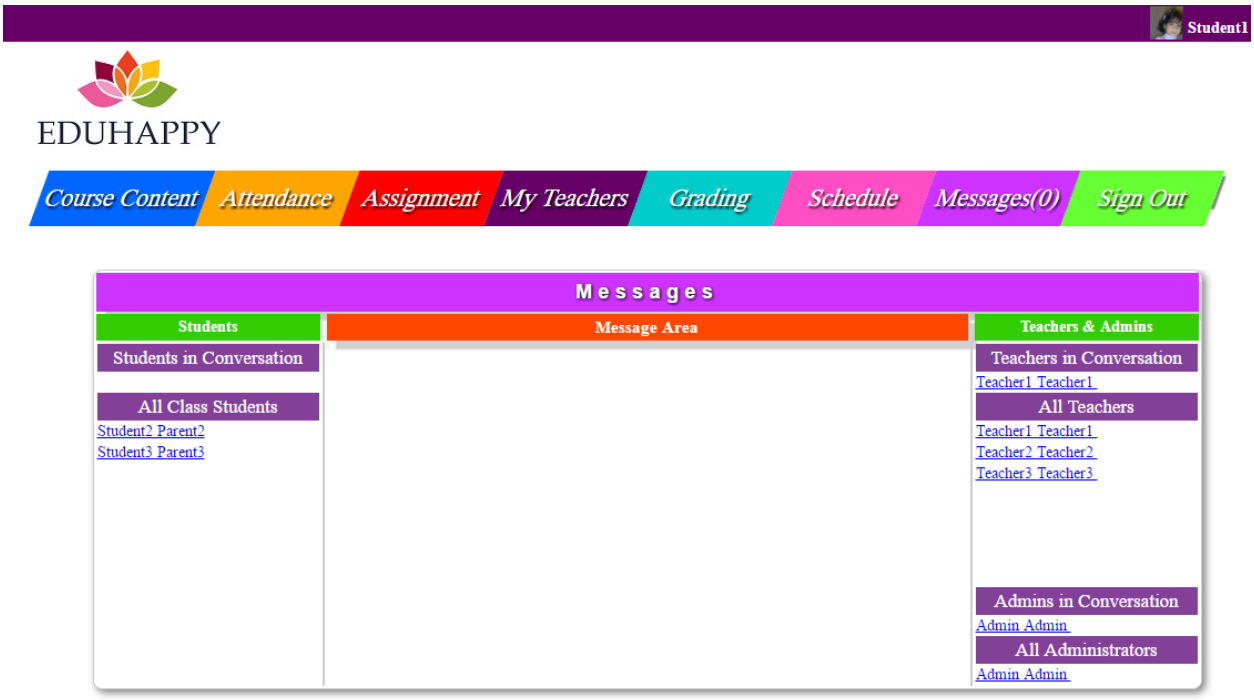
Notice that the class changed from C1-A to C1-B

Same applies to the student group.

Messages

The messages feature is provided to the students to help improve the communications and collaboration. With messages, the students can communicate with each other and communicate with their teachers as well as the school administration.

Go to Messages in the main menu bar and click on Messages link to get the below screen:

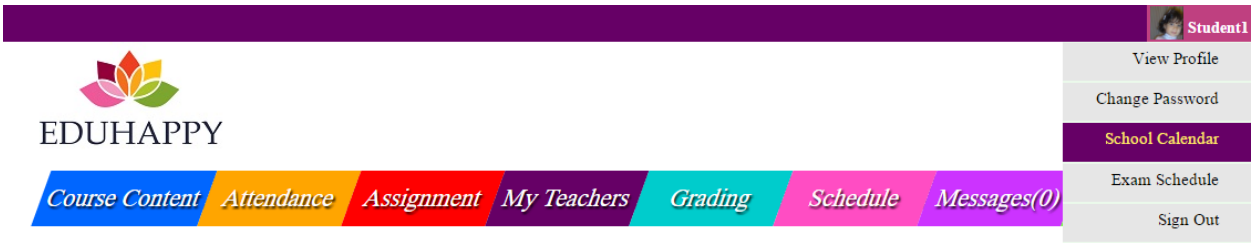


School Calendar

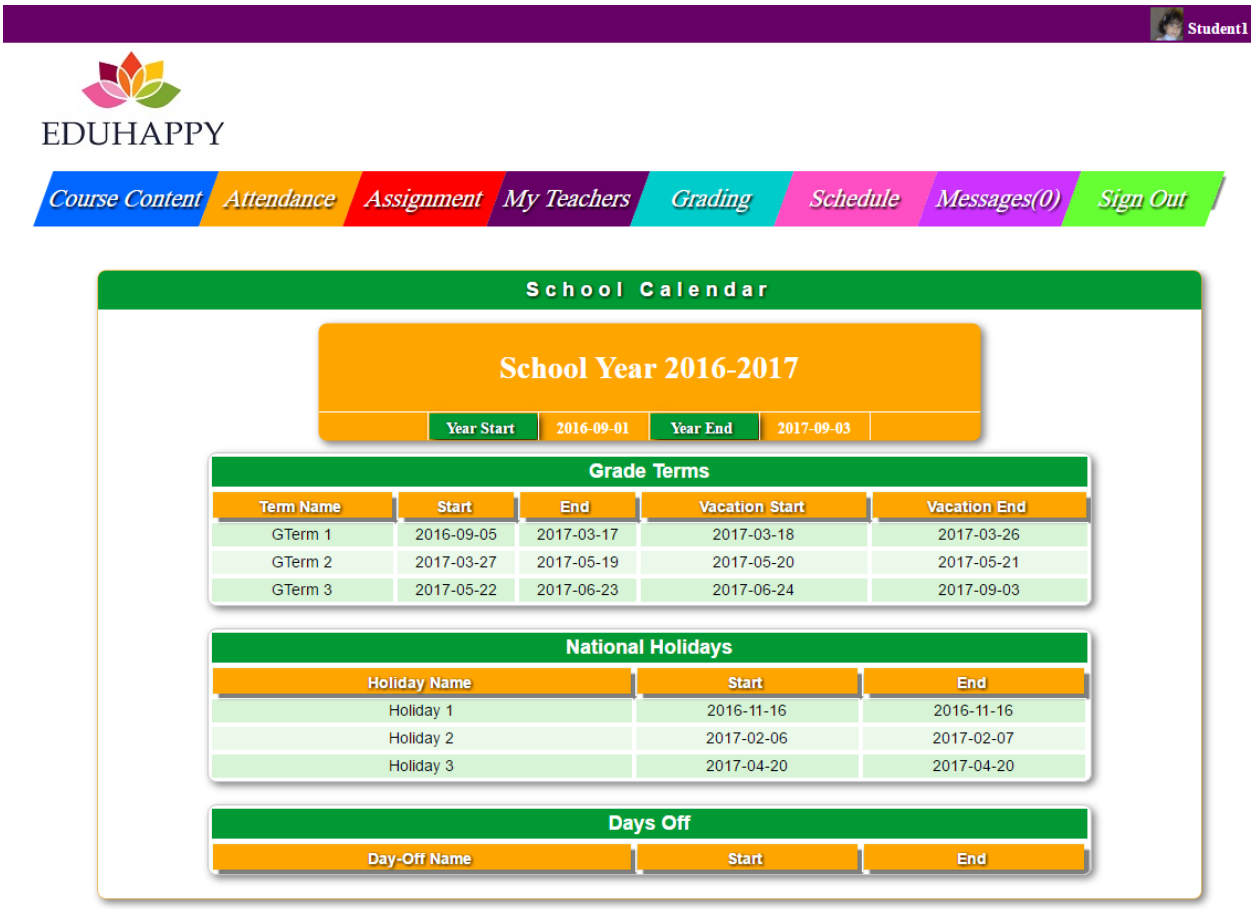
Students can view the school calendar which gives information about the school year start and end dates as well as all the terms dates and their vacations.

School Calendar also lists all the national holidays and all the days-off.

To access the School Calendar, go to the menu in the upper right corner and click on School Calendar as follows:

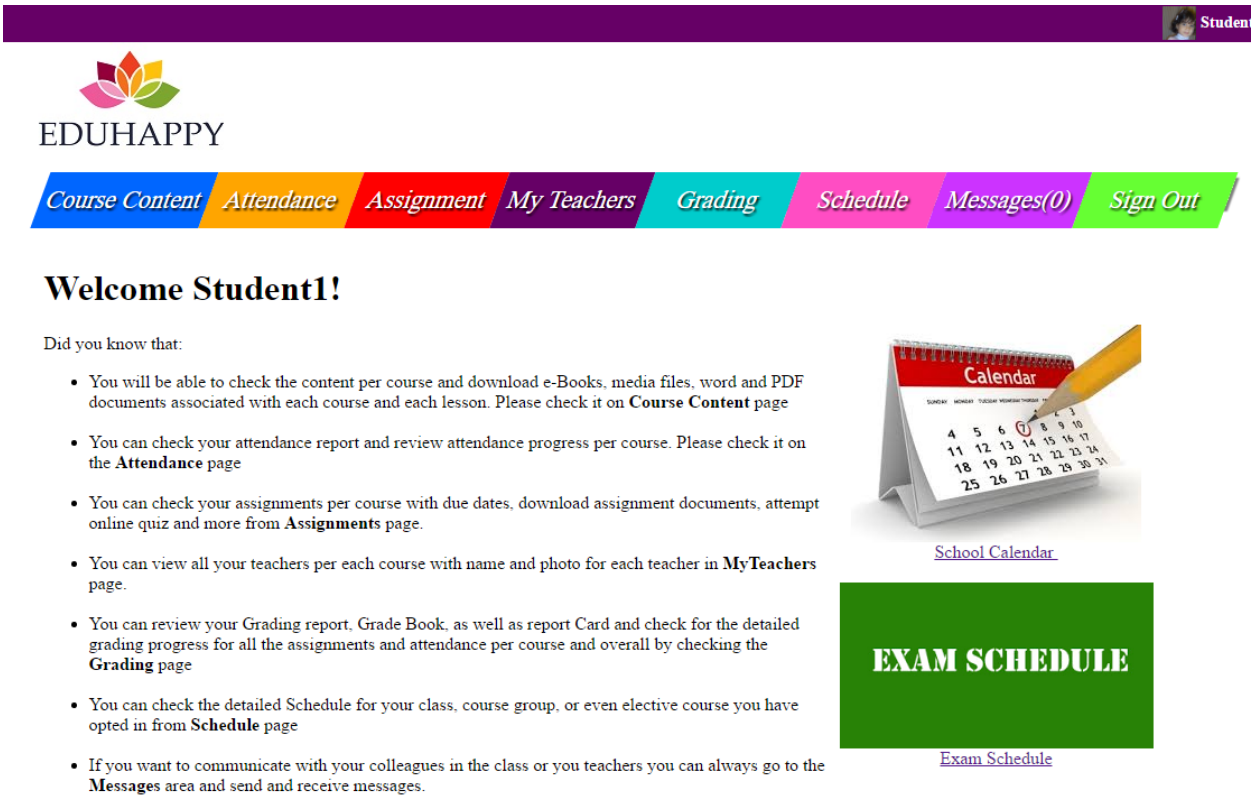


You will get access to the School Calendar as below:



Note that you can also access school calendar from the main page

Click on the logo in any page and you will be redirected to the main page as follows:

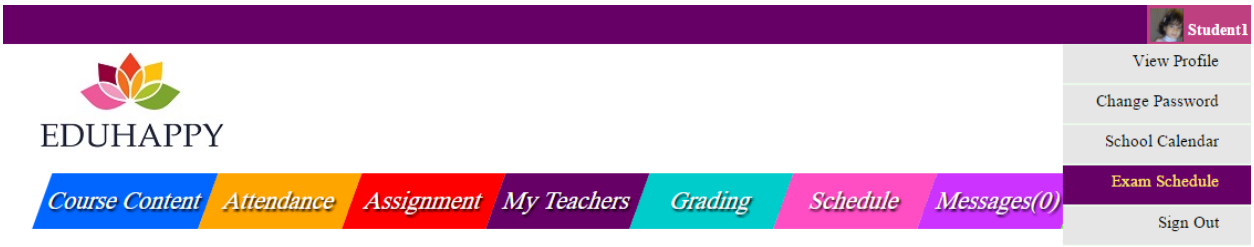


You can click on the School Calendar on the right to access the school calendar shown earlier.

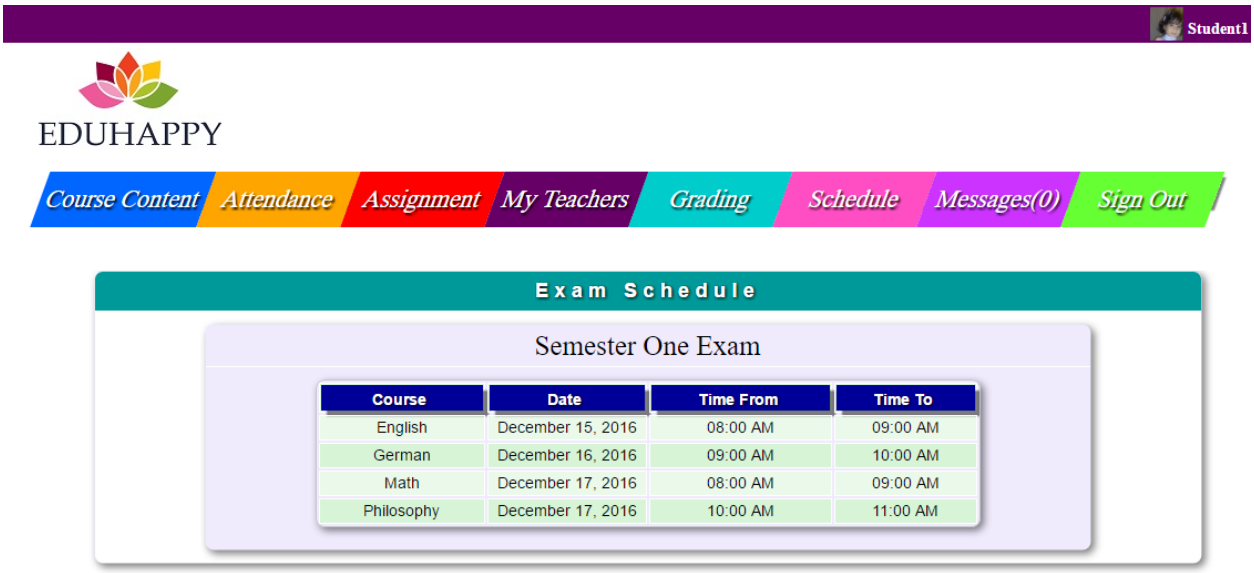
Exam Schedule

Exam Schedule gives information to the students on the course exam date and time.

To access the Exam Schedule, go to the menu in the upper right corner and click on Exam Schedule as follows:

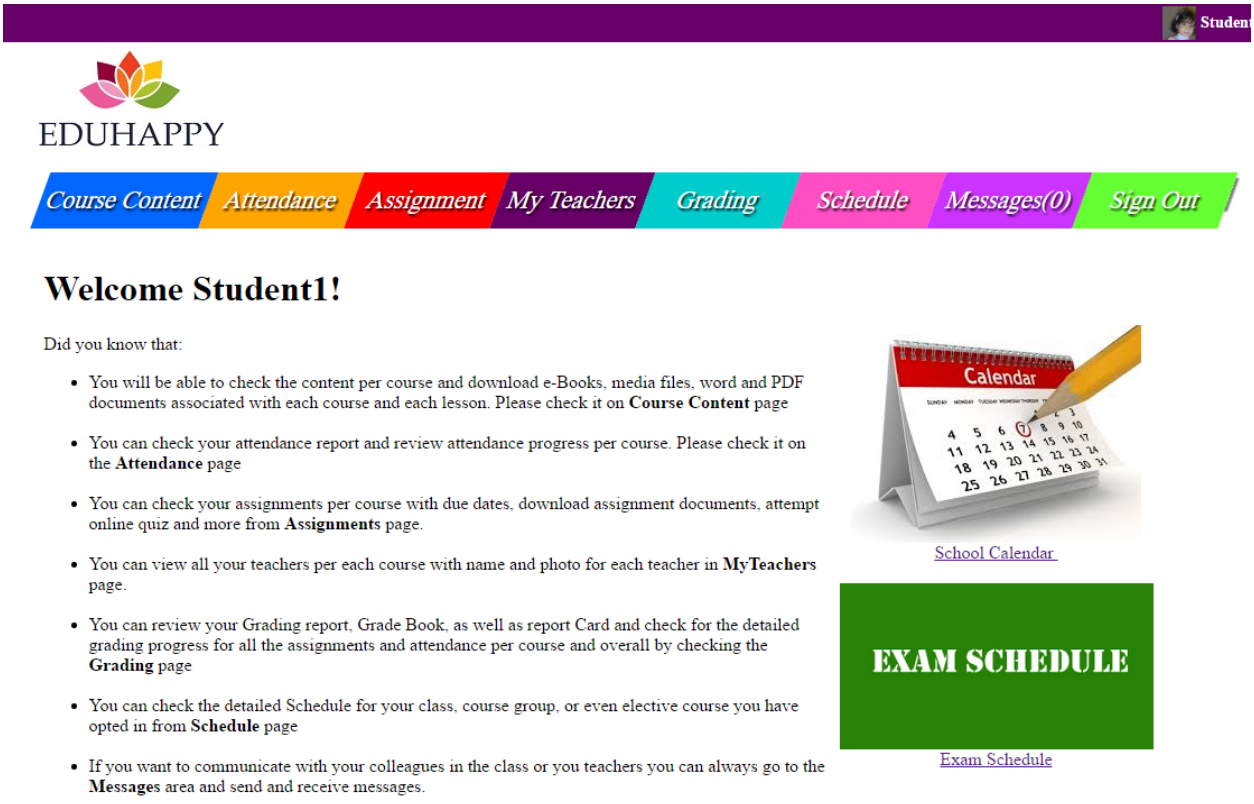


You will get access to the Exam Schedule as below:



Note that you can also access the exam schedule from the main page

Click on the logo in any page and you will be redirected to the main page as follows:



You can click on the Exam Schedule on the right to access the exam schedule shown earlier.

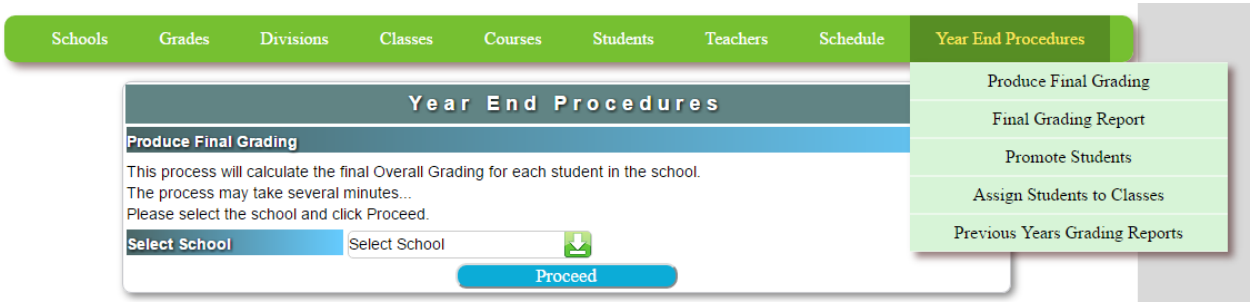
Year End Procedures

The year-end procedures are the tasks that need to be done at the end of every school year.

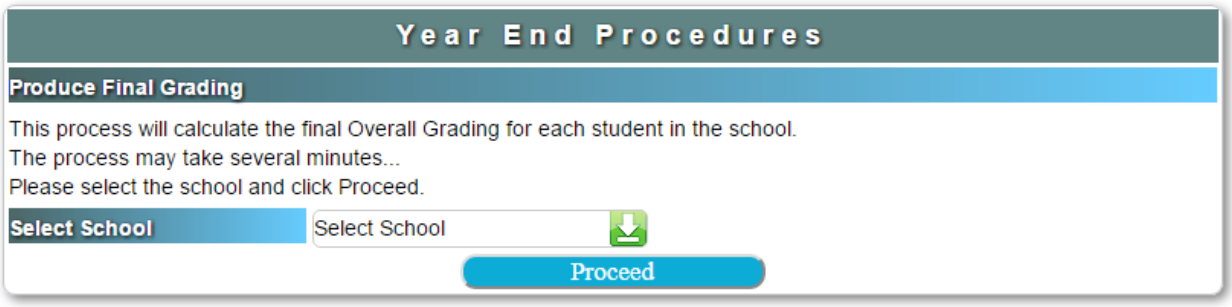
Once the year finished, you need to produce the final grading for each student in the school and you need to decide if this student will be promoted to the next grade or will remain in the current one. In order to do that, the system provides you with all the required tools to help you produce the final grading report with qualified students to be promoted to the next grade and those who will have to remain without promotion. The system will also provide you with the tools necessary to actually promote the students after you review the final reports. Once the promotion process is done, the students can access the final grading report via the student portal. The students will also be able to retrieve their grading reports related to previous school year. Through the year end procedures and after promotion you will be able to deploy the students to their new classes seamlessly with easy and straightforward steps. You can also check the reports for the students in previous years with all the grading details such as the courses grades, exam semester grades, all assignment categories as well as the attendance grades.

Produce Final Grading

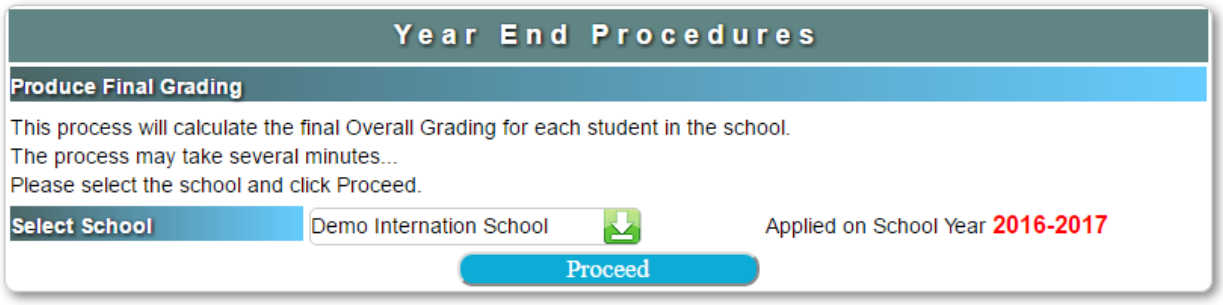
To start with the year-end procedures, as Admin, go to Year End Procedures in the main menu bar and select Produce Final Grading as below:



In the Produce Final Grading form, you will need to select the school for which you would like to generate the final grading records.



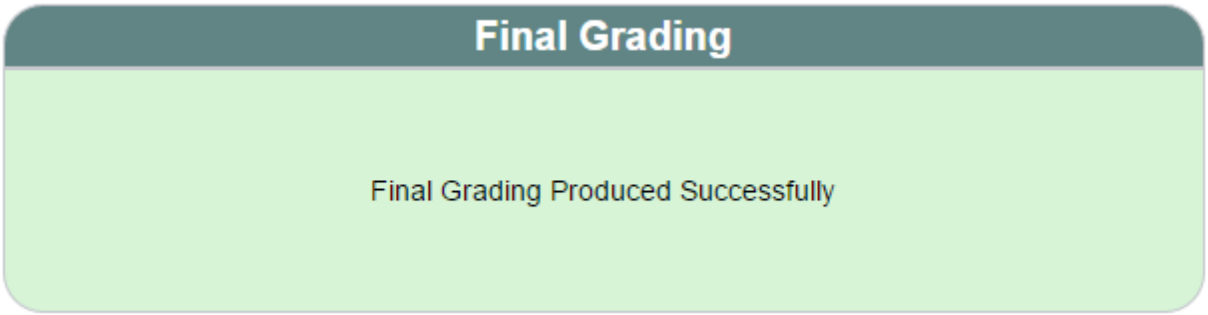
Select the school and the system will automatically detect the current year on which the procedures will be applied and will display the year name next to the school as below:



Click Proceed button to generate the final grading records for each student in the school.

This process may take few minutes and depends on the number of students in the school as well as some other factors such as grading records that being processed.

Once finished, the system will respond with the following message:

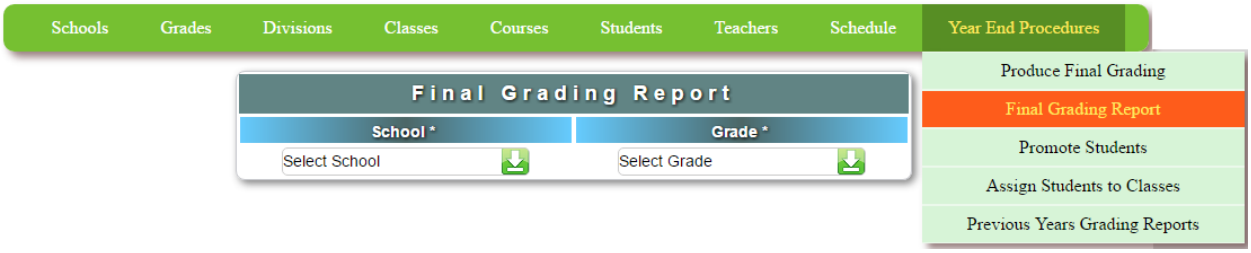


Please note that this process will roll back completely if there is any failure to generate the final grading record even for one student. If any failure happened, you will need to repeat the process again for all the students.

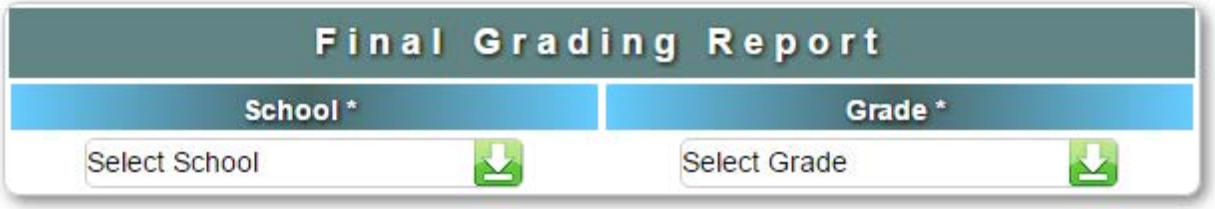
Final grading reports

Next step in the procedures is to produce final grading reports which will show you the final grading percentage for each student and compare it with the passing Grade percentage and then inform you whether the student has passed or failed for this year. From this report, you will also be able to review the full grading report card and all the grading details such as the assignments categories, attendance, exam grades …etc.

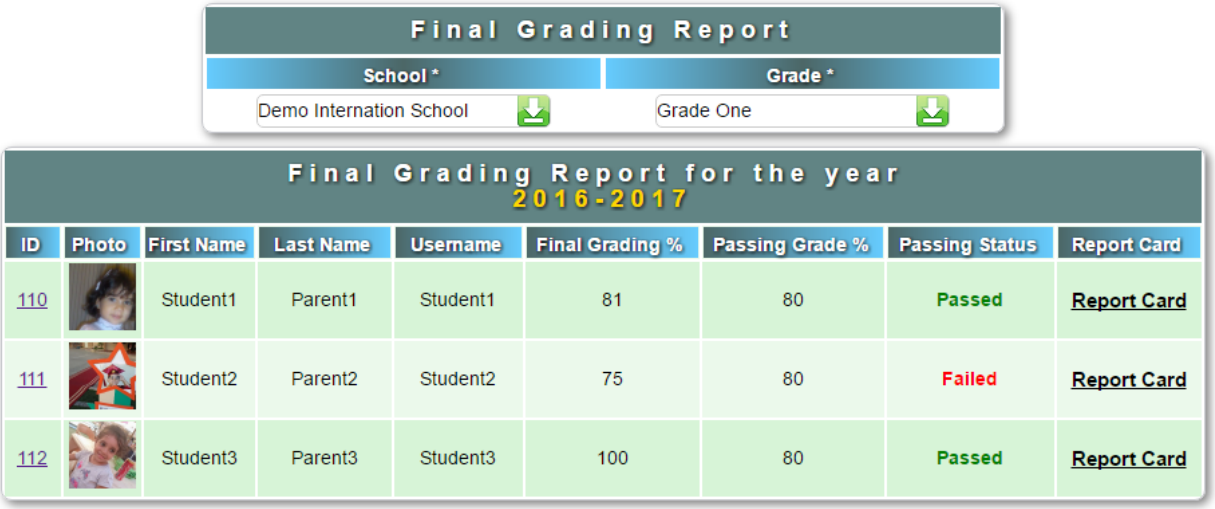
To produce the final grading reports, go to Year end Procedures > Final Grading Report



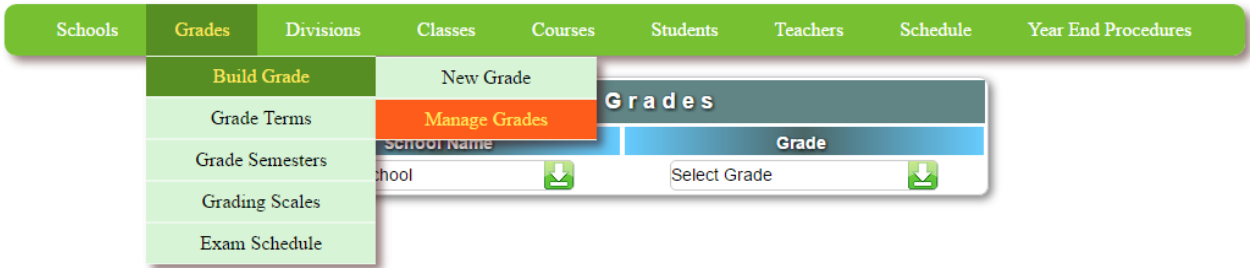
You will get two drop down lists as below:



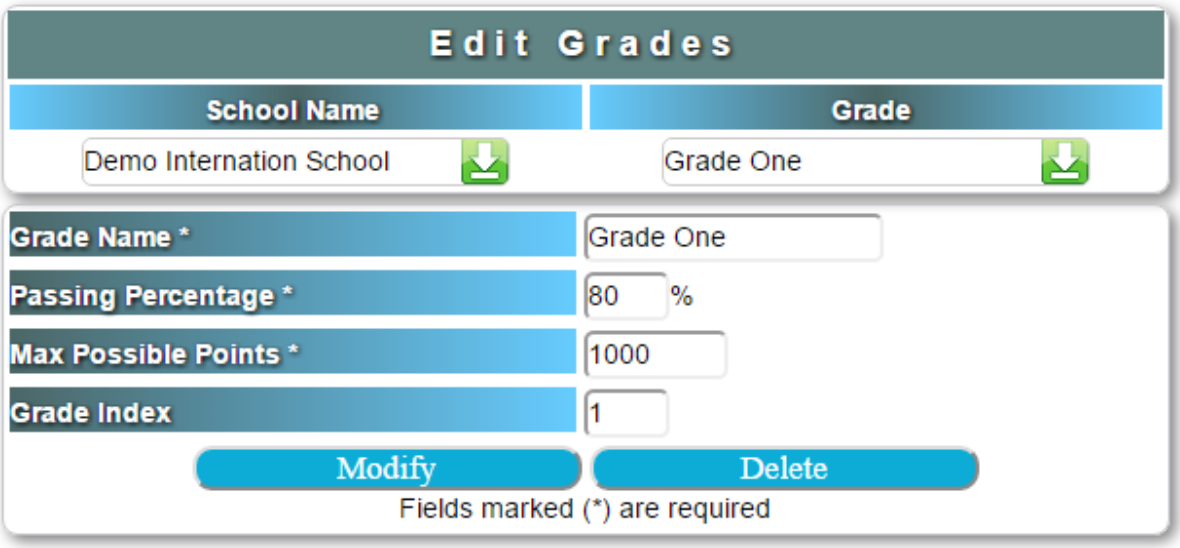
You will need to select the school and the grade and the system will automatically generate the report as follows:



As you can see in the report, the student name is displayed with final grading percentage and passing grade percentage. Remember that the passing grade percentage is the one you have entered when you created the Grade. To recall, go to Grades > Build Grades > Manage Grade as below:

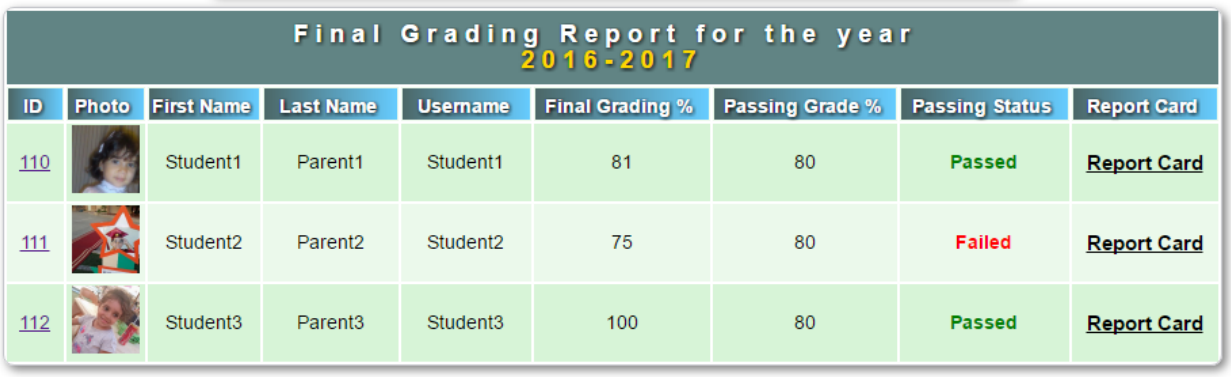


Select the school and the grade from the drop down lists:



As shown in the screen above, the Passing Percentage is 80% and that's the one displayed in the report.

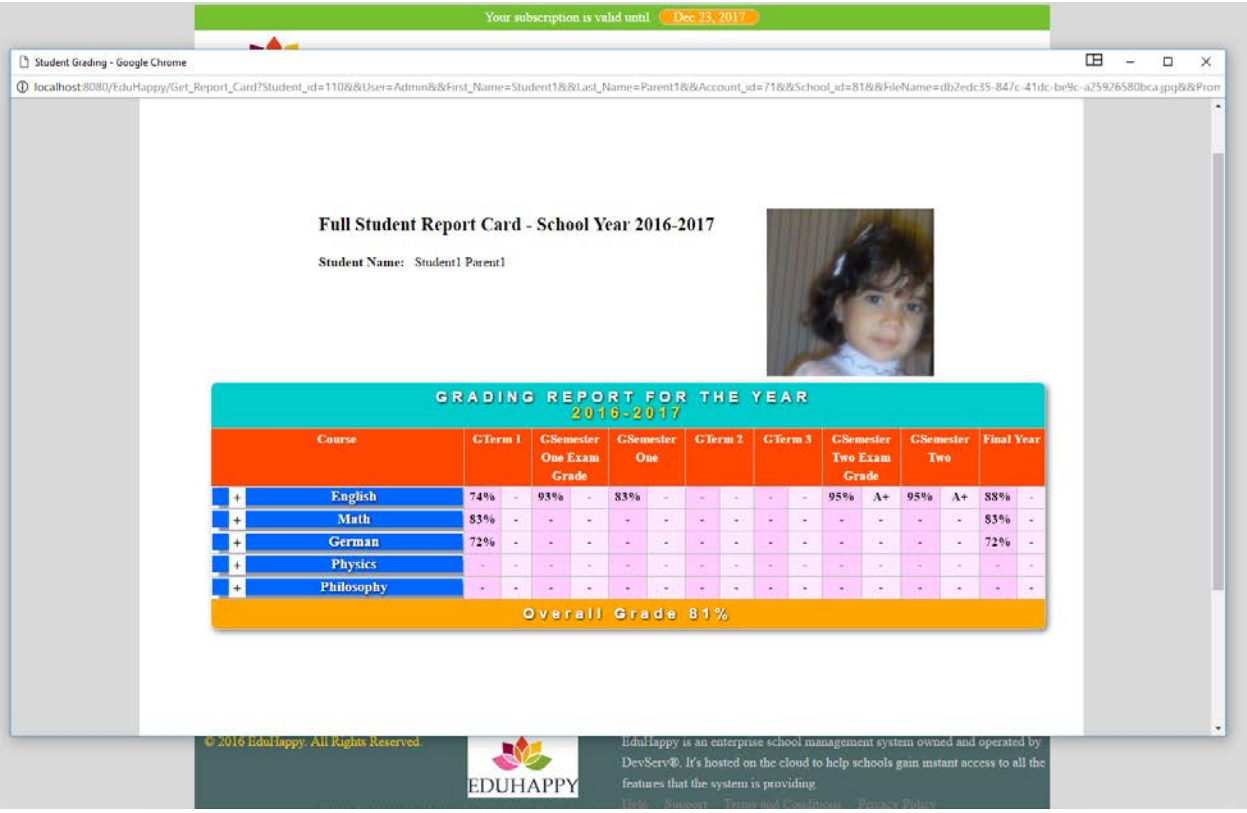
As you can see in the report, there is a Passing Status as well. This is generated based on the student's Final Grading compared to the Passing Grade. If the Final Grade is higher than or equal to the Passing Grade then the student has passed this grade and is qualified to be promoted to the next grade. If Final Grade is less than the Passing Grade then the student has failed in this year and will remain in the current grade.



Final Grading Report for the year 2016-2017

ID	Photo	First Name	Last Name	Username	Final Grading %	Passing Grade %	Passing Status	Report Card
110		Student1	Parent1	Student1	81	80	Passed	Report Card
111		Student2	Parent2	Student2	75	80	Failed	Report Card
112		Student3	Parent3	Student3	100	80	Passed	Report Card

You will also have a link to the full Report Card which will allow you to review all the grading elements that contributed to this final grading. Click on the Report Card link and you will get the following report:



If you click on the plus (+) sign next to any category, you will get the categories break down with all the categories grading percentages as below:

Full Student Report Card - School Year 2016-2017

Student Name: Student1 Parent1

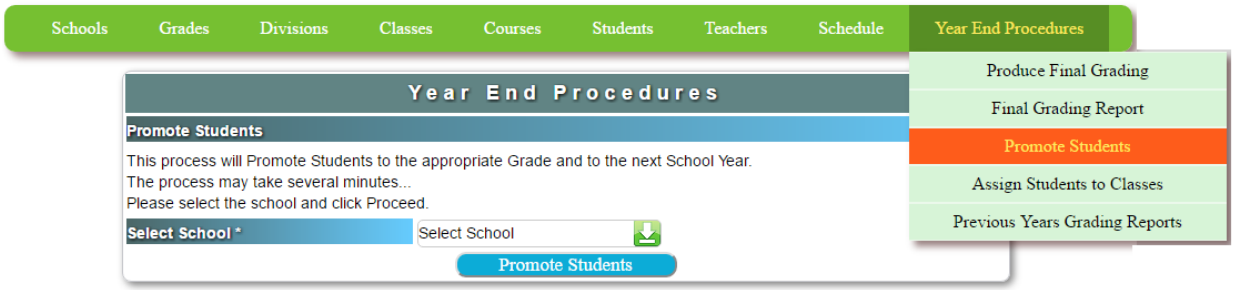
id	Date	Time From	Time To	Status	Grade	Out of	%
136	2016-09-07	11:00:00	11:45:00	Present	10	10	100%
133	2016-09-08	08:00:00	08:45:00	Absent	5	10	50%
134	2016-09-09	09:00:00	09:45:00	Excused	8	10	80%
134	2016-09-13	09:00:00	09:45:00	Late	7	10	70%

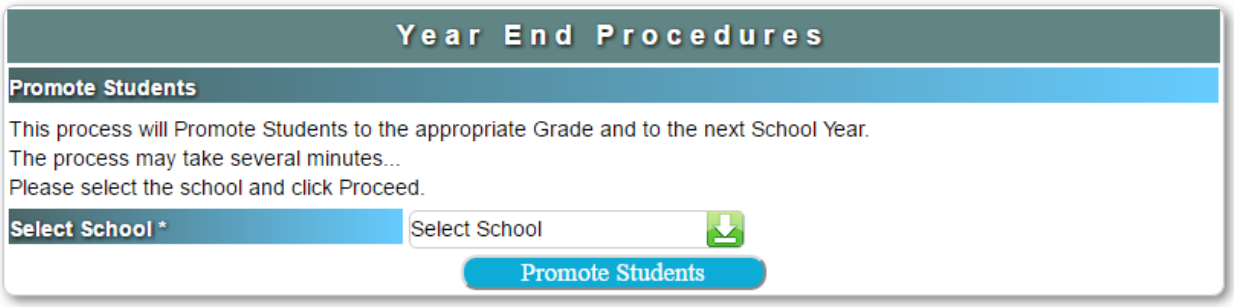
You need to make sure that all the grades in all the grading elements, as well as the final grade, are correct in order to proceed to the next step in the year end procedures which is the promotion process. After the promotion process, there will be no chance to correct any grades.

Promote Students

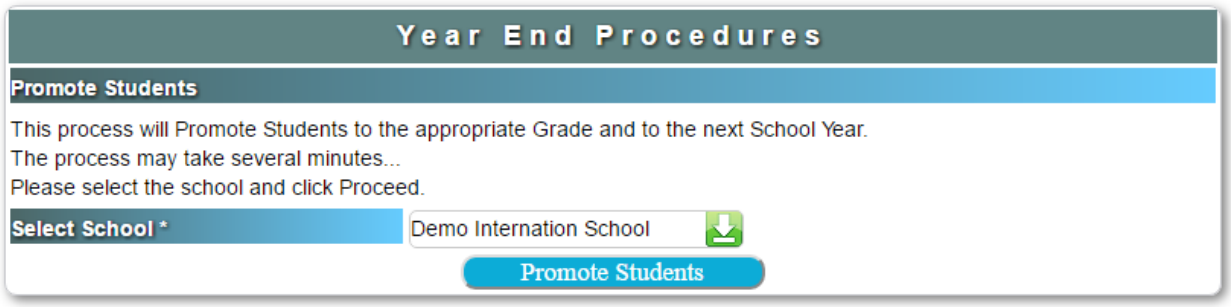
To start the promotion process, go to Year End Procedures > Promote Students as below:



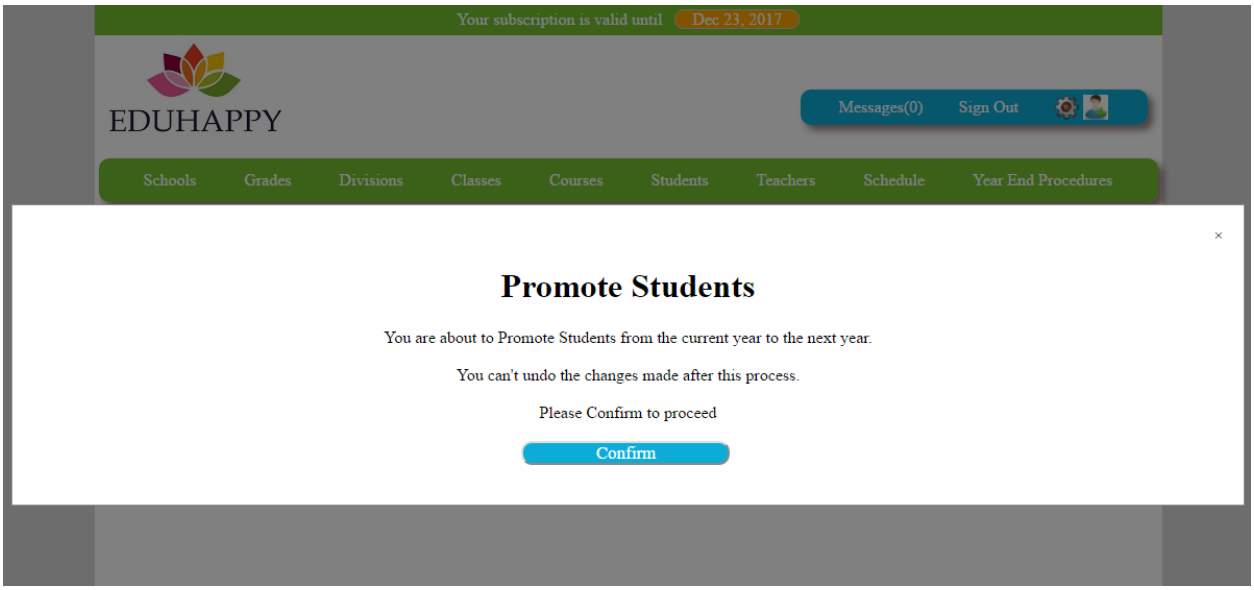
You will get the following form to select the school:



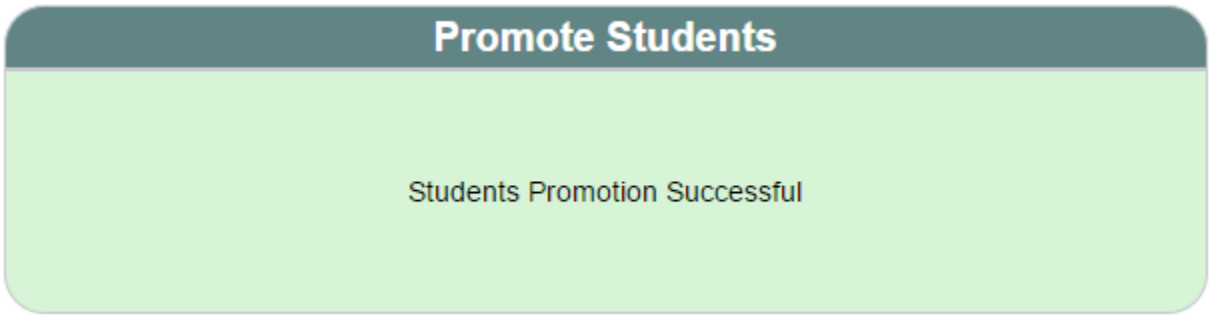
Select the school under which you want to promote the students and click on Promote Students button.



Since this is extremely critical process, the system will display a dialogue box to inform you that the changes out of this process cannot be undone and will need your confirm that you really want to proceed with the promotion process. The following dialogue will be displayed once you click on the Promote Students button:



Click on Confirm button to proceed with the process. Once you click the button, the system will start promoting all the students in the school. The process may take several minutes. After the process is completed, the system will respond with the following message if the promotion is successful:



Please note that to proceed with the process, you have to have a "next school year" or otherwise the system will fail to promote the students since it will not find a year to promote the student to.

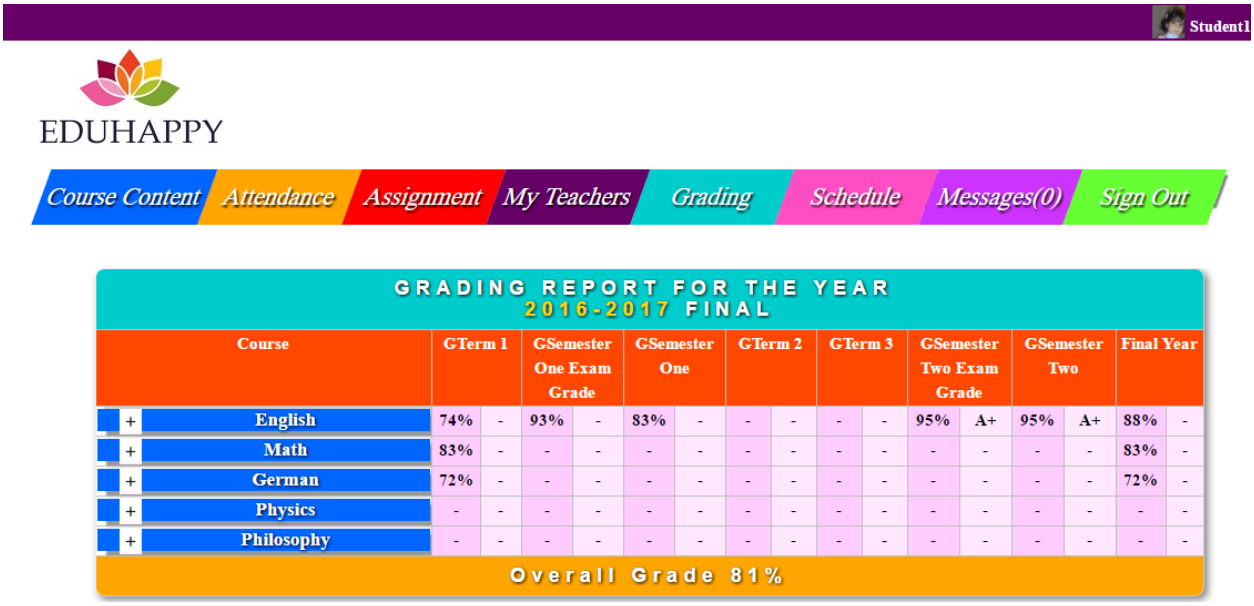
Please also note that if the process fails for even one record, the whole process will roll back to ensure the integrity of the data. It means all students have to be promoted all at once or otherwise there will be no promotion whatsoever.

Once this process is done successfully, the students now can check their "Final" grading report. Final here means there will be no changes on that report anymore. The teachers will not be able to take any more attendance or grade any more assignments or change any graded

assignments. There will be no chance to change the exam semester grades. There will be no more chances to edit in this data anymore.

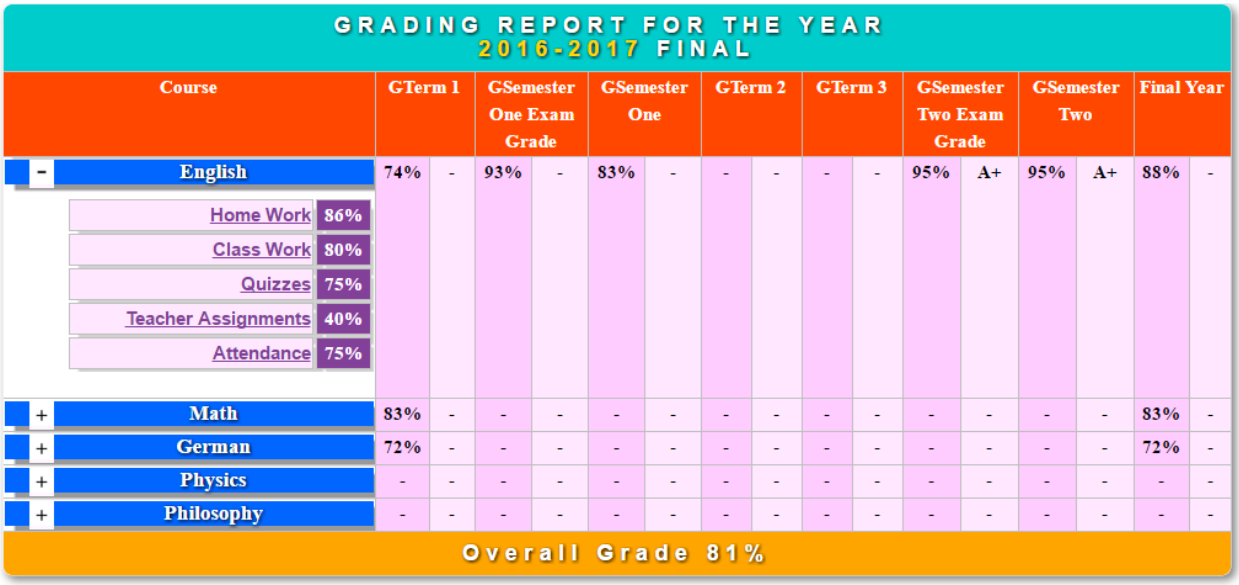
To check the final report card from the students' perspective, let's login to the Student Portal as Student1. Once logged in, the student will find the news about the final grading in the main page as follows:

If the student clicks on “Check It HERE” link, she will be redirected to the Grading page to review the final Grading report card as follows:



Notice that the report header explicitly states that the report is “Final”.

As explained in the admin part, the student will also be able to check the entire breakdown by clicking any plus (+) button to get all the Categories breakdown with grades as well as the Attendance grade as follows:



Back to Admin, you can now check the final report for any student by following the same steps explained in the Final Grading Reports section but notice that it is not for review now, rather it is final as below:

Full Student Report Card - School Year 2016-2017

Student Name: Student1 Parent1

GRADING REPORT FOR THE YEAR 2016-2017 FINAL

Course	GTerm 1		GSemester One Exam Grade		GSemester One		GTerm 2		GTerm 3		GSemester Two Exam Grade		GSemester Two		Final Year	
+ English	74%	-	93%	-	83%	-	-	-	-	-	95%	A+	95%	A+	88%	-
+ Math	83%	-	-	-	-	-	-	-	-	-	-	-	-	-	83%	-
+ German	72%	-	-	-	-	-	-	-	-	-	-	-	-	-	72%	-
+ Physics	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-
+ Philosophy	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-

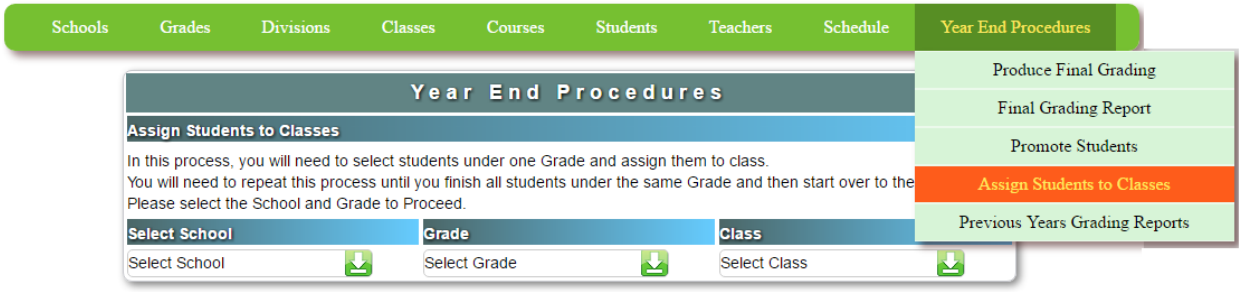
Overall Grade 81%

You can notice the word "FINAL" now displayed in the report header as shown above.

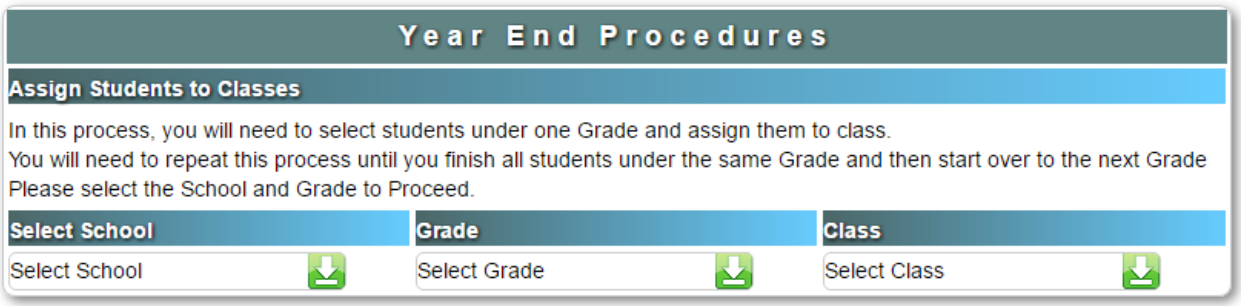
Now, since you have promoted the students to the next grades, the students are left without classes assigned. You have to assign classes to each student under the new grade. To do this, the system provides you with necessary tool to do this swiftly instead of selecting the students one by one to assign the class. The process is called "Assign Students to Classes" and it's the final step in the year end procedures path.

Assign Students to Classes

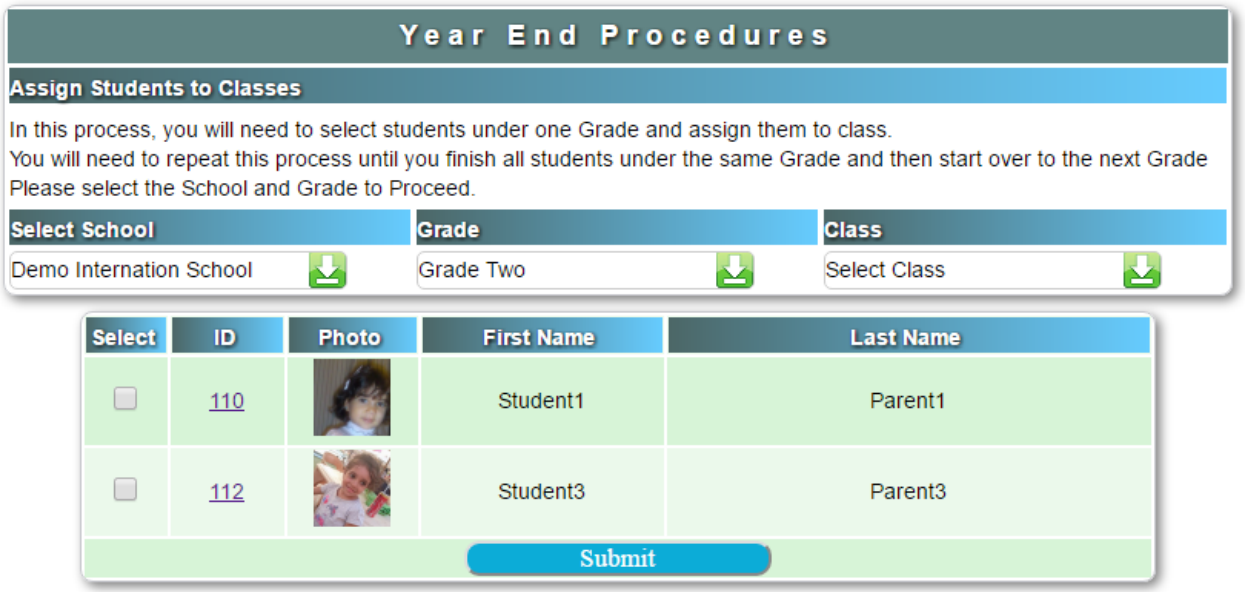
To start this process, select Year End Procedures > Assign Students to Classes as follows:



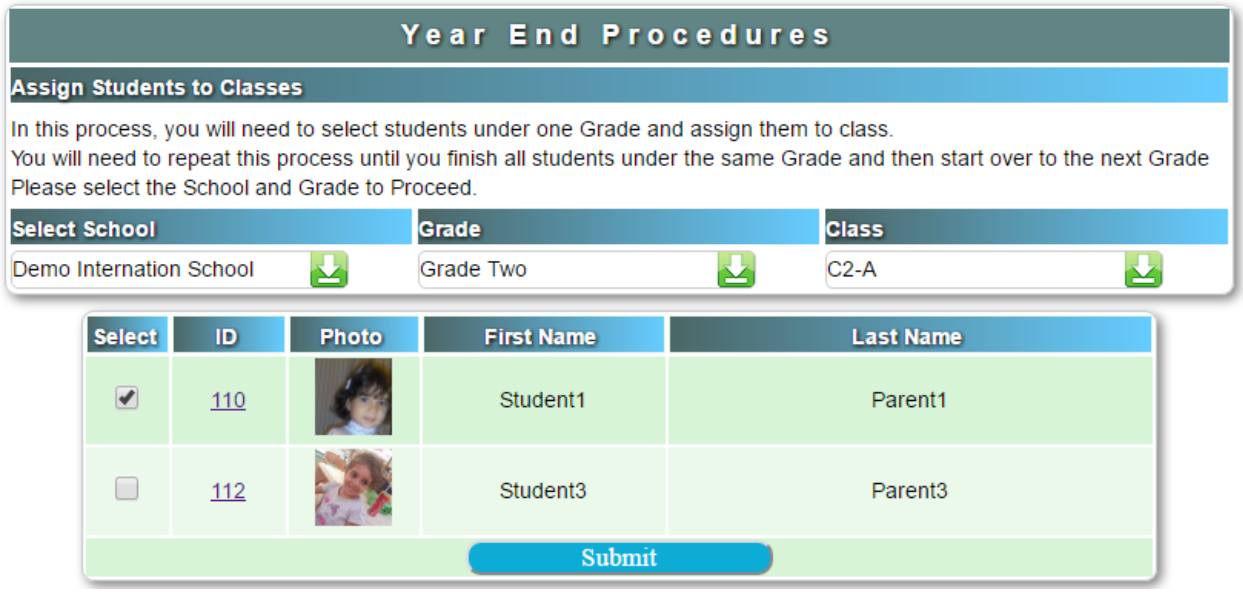
You will get three drop down lists as below:



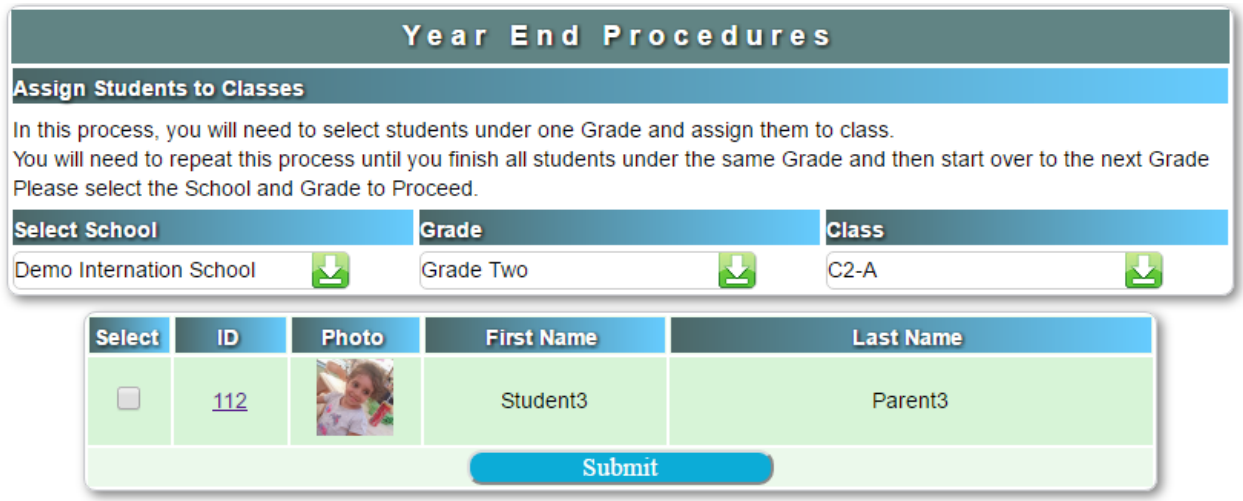
You need to select the school and then select the grade to which you have promoted the students. Once you select the grade, the system will list all the newly promoted students under this grade as follows:



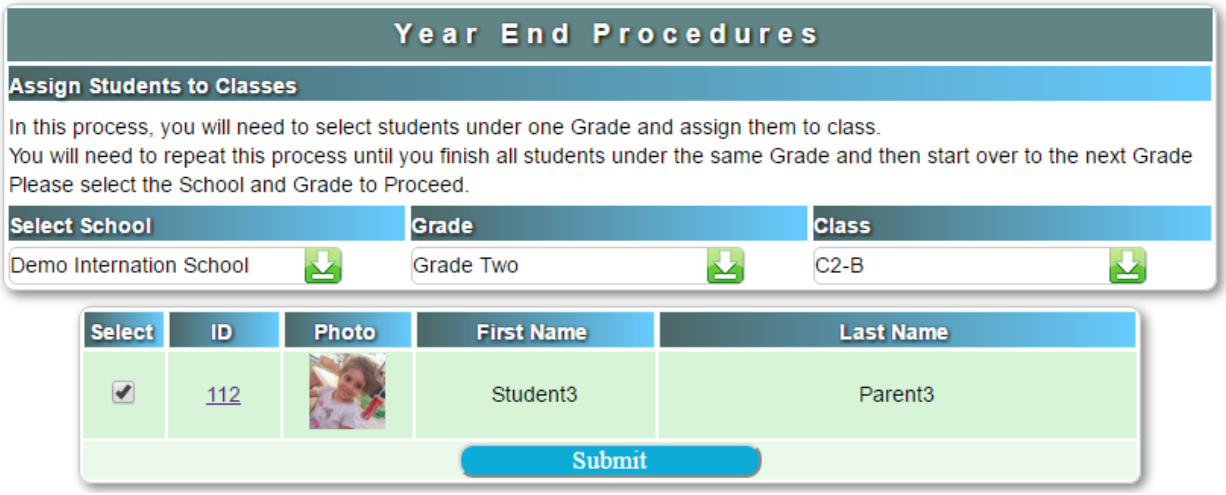
Now select the class from the Class drop down list and then select the students you want to assign to that class by checking the checkbox next to each student as follows:



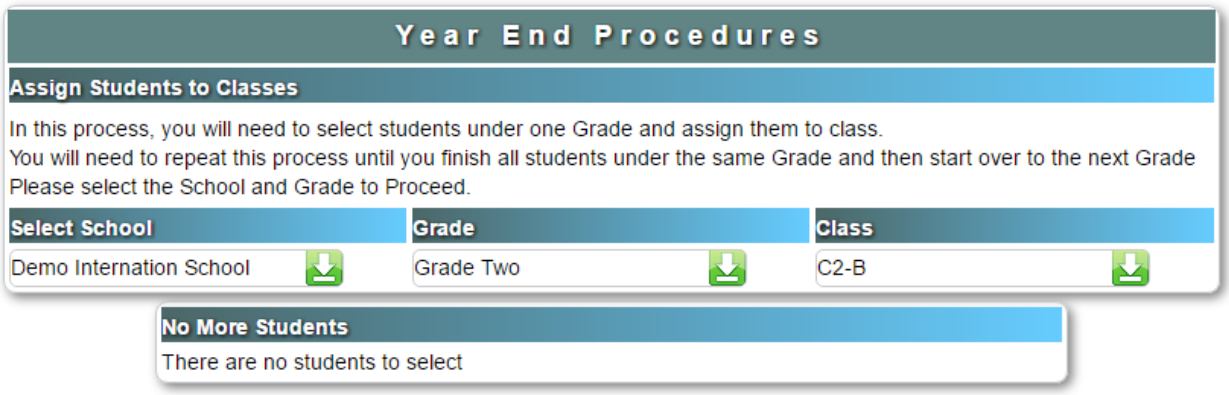
This will assign Student1 to class C2-A. When finished, click Submit button. The system will automatically remove the selected students from the list and leave the unselected ones to give a chance to assign them to another class as follows:



If we change the class to C2-B and select Student3, then system will assign Student3 to class C2-B and remove her from the list as well like below:

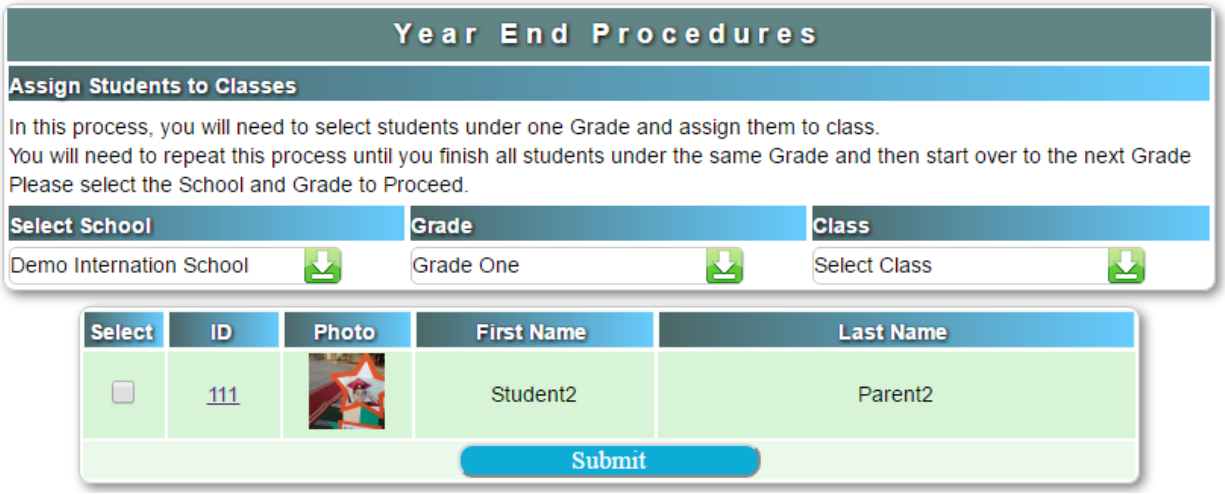


Once you click the Submit button, the system will remove Student3 from the list which will leave the list empty as follows:



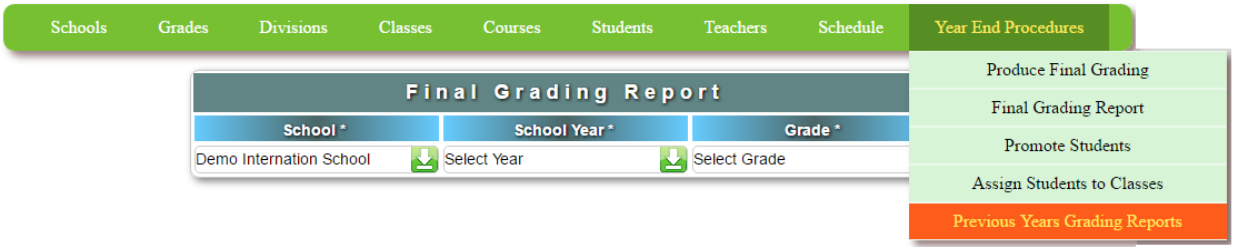
In this case, you have finished assigning all the students to their classes under Grade Two. You can move on to another grade and repeat the same process.

Note that Student2 is not included in the above list because, remember, he failed and remained in the same grade which was grade one. To assign him a class, you need to select Grade One instead and he will be included in the list as below:

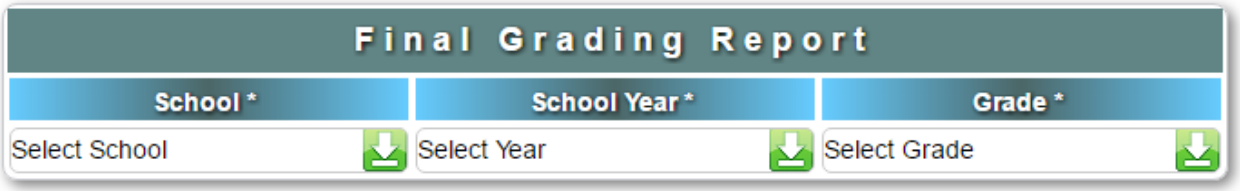


Then choose the appropriate class within Grade One for him to assign.

Previous Years Grading Reports



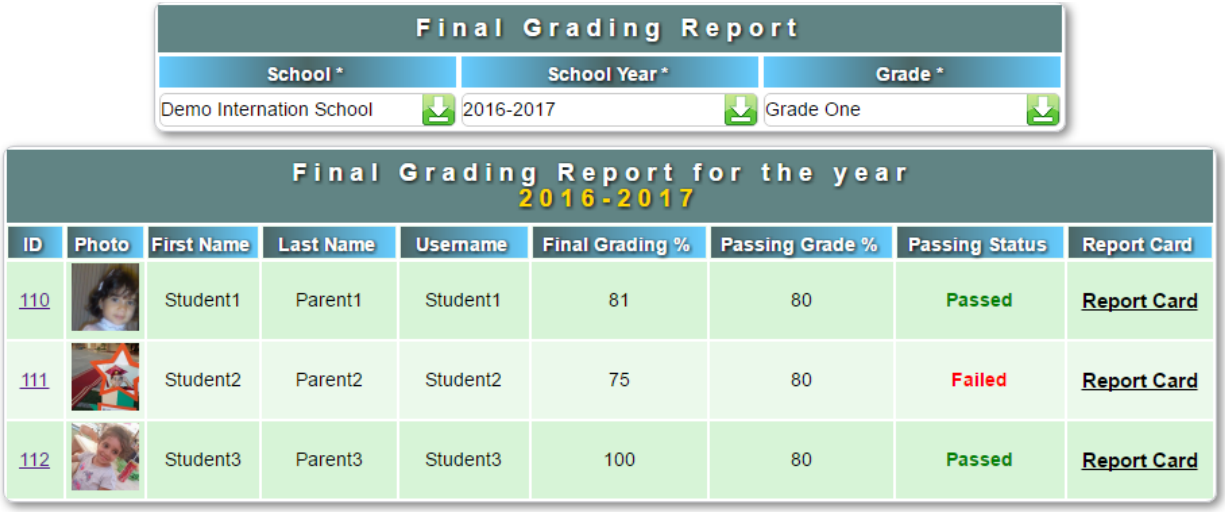
To check the grading report for previous years, you can select Year End Procedures > Previous Year Grading Report and you will get the following three drop down lists:



Select the school and the system will automatically list the previous school years in the Year drop down list. But in order to simulate this, we will need to have previous years. Therefore, we will move the system time to the next year (2017-2018) in order to be able to get the year (2016-2017) as a previous year.

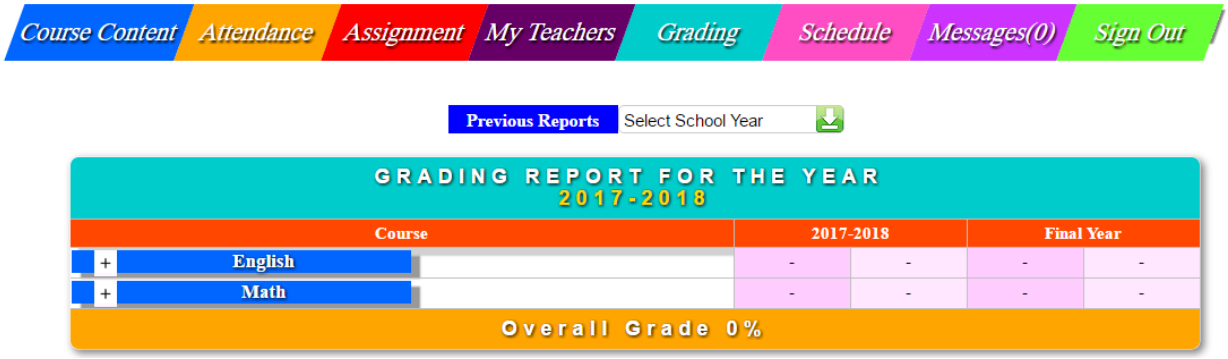
Assuming we are now in year 2017-2018, we can select the previous year from the list as follows:

Now select Grade One from the Grade drop down list, the system will automatically retrieve the grading report for that grade in the year 2016-2017 as follows:

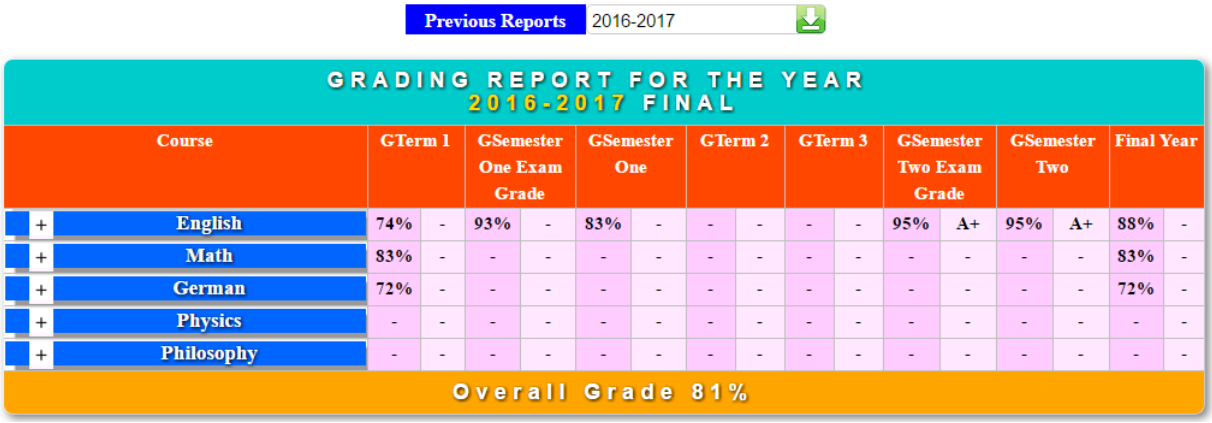


You can then click on Report Card link to get all the grading details as explained earlier.

Similarly, if you would like to get the previous reports from the students' perspective, login into the Student Portal using Student1 login information and go to Grading page. You can see the drop down list titles "Previous Report" as follows:



Select year 2016-2017 from the drop down list and the system will automatically retrieve the final grading report for the year 2016-2017 as below:



Again, all the grading information is available for the student to retrieve as we have explained earlier.

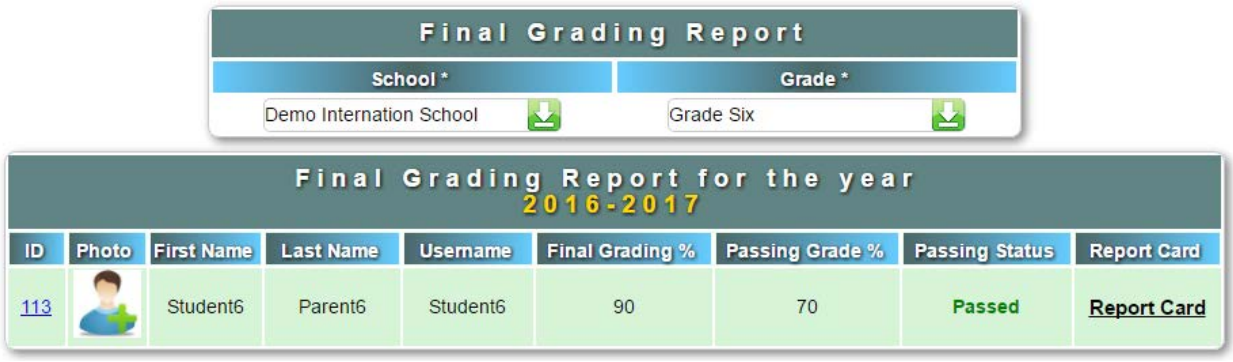
Graduation Process

Graduation in the system means there is no more "Next Grade" to promote the students for if they are qualified and passed the current grade.

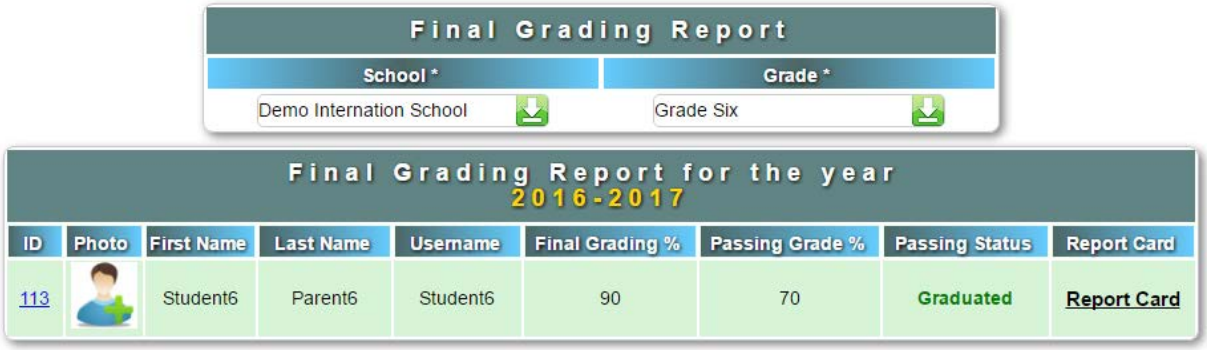
There is no specific process by itself for the graduation. It's the same as the Promote Students process and will be executed implicitly within the promotion of other students. The only difference is that the students are at the last grade in the system. Last Grade is the grade with the highest index among all other grades. For instance, in our scenarios, we have created six grades. Last grade in our case is Grade Six which has index 6 and that is the highest index exists for all grades. It means there is no more upper grade or next grade to promote the students who are in Grade Six and achieved the passing percentage. If the system is promoting the students in Grade Six, then it will not find any more grades to which it can promote the students and in this case the system will mark the student passing status as Graduated instead of Passed.

Let's assume we have Student6 in Grade Six who achieved 90% while the Passing Grade percentage for grade six is 70%. In this case, the student will pass the grade and the final

grading report before the promotion process will appear like below:



When we finish the Promote Student process and check the final grading report again after the process is completed we will get the below report for Student6:



Notice that the student passing status now is “Graduated” instead of “Passed”.

Having said that, there are no more actions can be taken regarding the graduated students. But you still can get their reports and the students can still retrieve their reports as usual.
